

Table of Contents

<i>Introduction</i>		<i>xxi</i>
<i>Assessment Test</i>		<i>xxx</i>
Chapter 1	Designing Data Access	1
	Determining the Right Access Method	2
	Designing Appropriate Data Access Technologies	3
	Designing an Appropriate Data Access Object Model	15
	Deciding When to Implement Cursors	19
	Deciding When to Use Cursors	19
	Designing a Cursor Strategy for a Data Access Component	20
	Deciding How to Maximize Cursor Performance	20
	Detecting Which Applications Are Using Cursors and Evaluating Whether to Remove Them	22
	Making the Cursored Choice	25
	Planning Caching	25
	Designing Caching Strategies	25
	Selecting ADO.NET Caching	28
	Designing Custom Caching Functionality	31
	Designing a Refresh Strategy for Cached Data	32
	Summary	34
	Exam Essentials	35
	Review Questions	36
	Answers to Review Questions	40
Chapter 2	Designing Application Access	43
	Implementing Client Libraries	44
	Using Management Object Applications	46
	Designing Server Management Objects (SMO) Applications	47
	Designing Replication Management Objects (RMO) Applications	58
	Designing Automation Management Objects (AMO) Applications	61
	Designing SQL Server Networking Interface (SNI) for Asynchronous Queries—Or, “It Starts at the Endpoint!”	64
	Simplifying Application Design	67
	Understanding the Features of MARS	69
	Understanding Row Versioning and MARS	70

xii Table of Contents

	Designing Queries That Use Multiple Active Result Sets (MARS)	71
	Deciding When MARS Queries Are Appropriate	72
	Using MARS and the SQL Server Lock Manager	74
	Choosing How to Get the Max from MARS	75
	Summary	76
	Exam Essentials	77
	Review Questions	78
	Answers to Review Questions	82
Chapter 3	Designing Queries	85
	Writing Queries	87
	Understanding behind the Scenes: The Procedure Cache	87
	Understanding the Different Types of Query Plans That Promote Reuse	88
	Understanding Best Practices for Reusing and Recompiling Plans	92
	Understanding the Cached Batch	93
	Using Showplan to View Your Query Plans	94
	Improving Query Performance	97
	Modifying Queries to Improve Performance	97
	Understanding the Sea Is Full of XML	99
	Designing Queries Using XQuery	99
	Using XQuery with the XML Data Type in SQL Server 2005	106
	Using XML Data Modification Language	113
	Binding and Parameterizing XML Queries with Relational Data	119
	Guidelines for Processing XML Queries	121
	Summary	122
	Exam Essentials	123
	Review Questions	124
	Answers to Review Questions	131
Chapter 4	Using Cursors	133
	Understanding Data Access in Relational Data Systems	134
	Understanding Result Set–Based Operations	135
	Understanding Row–Based Operations	136
	Deciding When Cursors or Set–Oriented Operations Are Appropriate	139
	Selecting Cursors Appropriately	144
	Selecting Appropriate Server–Side Cursors	144
	Selecting Appropriate Client–Side Cursors	160

	Summary	160
	Exam Essentials	161
	Review Questions	162
	Answers to Review Questions	166
Chapter 5	Planning Error Handling	169
	Designing Code That Validates Input Data and Permissions	170
	Considering All User Input to Be Malicious	170
	Understanding the Principle of the Least Privilege	180
	Designing Code That Detects and Reacts to Errors	187
	Understanding the Structure of an Error	187
	Understanding the Levels of Severity	188
	Using @@ERROR	189
	Using Try...Catch	191
	Using PRINT	214
	Handling Errors in Applications	216
	Logging Errors	218
	Following Best Practices	220
	Designing SQL Server User-Defined Messages to	
	Communicate Application Events	221
	The sys.messages Catalog View	222
	sp_addmessage	223
	sp_altermessage	224
	sp_dropmessage	225
	xp_logevent	225
	FORMATMESSAGE	226
	Summary	229
	Exam Essentials	229
	Review Questions	230
	Answers to Review Questions	237
Chapter 6	Planning a Transaction Strategy	239
	Managing Concurrency by Selecting the Appropriate	
	Transaction Isolation Levels	240
	What Is a Transaction?	241
	Locking in the Database Engine	242
	Concurrency Side Effects	247
	Row Versioning Framework	252
	Database Engine Isolation Levels	252
	Designing the Locking Granularity Level	270
	Using Locking Hints	270
	Customizing Index Locking Behavior	276

xiv Table of Contents

	Designing Transaction Scopes	278
	Explicit Transactions	279
	Autocommit Transactions	280
	Implicit Transactions	280
	Batch-Scoped Transactions	282
	Bound Sessions	286
	Distributed Transactions	286
	Designing Code That Uses Transactions	287
	Using Explicit Transactions	287
	Errors and Transactions	294
	Using Distributed Transactions	294
	Best Practices	296
	Summary	297
	Exam Essentials	297
	Review Questions	298
	Answers to Review Questions	304
Chapter 7	Optimizing and Tuning Queries for Performance	305
	Evaluating Query Performance	306
	Understanding the Query Life Cycle: High-Level View	306
	Understanding the Query Life Cycle: A Closer Look	308
	Obtaining Query Plans	315
	Analyzing Query Plans	331
	Testing Queries for Improved Performance	336
	Detecting Locking Problems	340
	Modifying Queries to Optimize Performance	347
	Modifying Queries to Optimize Client and Server Performance	347
	Rewriting Subqueries to Joins	348
	Designing Queries That Have Search Arguments (SARGs)	350
	Converting Single-Row Statements into Set-Based Queries	351
	Summary	353
	Exam Essentials	353
	Review Questions	355
	Answers to Review Questions	362
Chapter 8	Optimizing Indexing Strategies	365
	Designing an Index Strategy	366
	What Are Indexes?	366
	What Are Pages?	366
	Types of Indexes	367
	Heaps, Clustered, and Nonclustered Indexes	368

	Nonclustered Indexes	375
	Full-Text Indexes	376
	XML Indexes	377
	Indexes on Computed Columns	380
	Indexes with Included Columns	383
	Indexed Views	385
	Index Limits	389
	Creating and Maintaining Indexes	390
	Creating Indexes	390
	Modifying Indexes	392
	Performing Online Index Operations	393
	Finding the Missing Index	393
	Fragmentation	399
	Using Index Metadata	406
	Summary	409
	Exam Essentials	409
	Review Questions	410
	Answers to Review Questions	418
Chapter 9	Scaling Out Applications	421
	Preparing to Leverage Your Database Applications	422
	Building the Foundation	422
	Stepping Up to Create a Well-Performing Database Application	423
	Leveraging Your Database Applications	425
	Deciding to Scale Up or Scale Out	425
	Scaling Out Data through Partitioning	426
	Understanding Scaleout Solutions	434
	Scaleout Using Scalable Shared Databases	435
	Scaleout Using Peer-to-Peer Replication	436
	Scaleout Using Linked Servers and Distributed Queries	438
	Scaleout Using Distributed Partitioned Views	438
	Scaleout Using Data-Dependent Routing	439
	Scaleout Using Service-Oriented Data Architecture (SODA)	440
	Summary	443
	Exam Essentials	443
	Review Questions	444
	Answers to Review Questions	448
Chapter 10	Resolving Performance Problems	451
	Getting Started	452
	Using Performance-Related Tools	452
	Using the Default Trace	454

xvi Table of Contents

Performance Monitoring Recommendations	456
Finding Out the Cause of Performance Problems	457
Troubleshooting Database Design	458
Rule 1: Pay Attention to a High Frequency of Queries Having More Than Four Join Operations	458
Rule 2: Avoid Using More Than Three Indexes for Frequently Updated Tables	459
Rule 3: Look for Large I/O Activity Due to Table Scans or Range Scans (scans >2)	461
Rule 4: Remove Unused Indexes	463
Troubleshooting CPU Problems	464
Scheduling in SQL Server 2005	464
Rule 1: Watch Out for Signal Waits Greater Than 25 Percent	466
Rule 2: Strive for More Than 90 Percent Plan Reuse	467
Rule 3: Decide Whether Parallelism Is the Best Choice for Your Environment	468
Additional Rules	471
Additional Causes for CPU Problems	471
Troubleshooting Memory Problems	483
Rule 1: The Average Page Life Expectancy Should Be Greater Than 300 Seconds	483
Rule 2: Watch Out for Sudden Drops (of More Than 50 Percent) for the Average Page Life Expectancy Value	483
Rule 3: Make Sure You Have Less Than One Memory Grant Pending	484
Additional Signs of Memory Problems	484
Detecting I/O Performance Problems	485
Rule 1: Look Out for Values Greater Than 20 Milliseconds for the Average Disk Second/Read Performance Counter	485
Rule 2: Average Disk Writes (Indicated by the Average Disk Sec/Write Counter) Should Be Less Than 20 Milliseconds	486
Rule 3: A Number of Scan Operations (Full Scans, Range Scans) Greater Than One Requires Further Investigation	486
Rule 4: The Top Two Wait Type Values Should Not Include I/O Waits	486
Additional I/O Rules	487
Troubleshooting Blocking Problems	488
Rule 1: Block Percentage Value Should Be Less Than 2	488

	Rule 2: Investigate Locking Problems If the Block Process Report Displays Blocks Longer Than 30 Seconds	489
	Rule 3: The Average Row Lock Waits Value Should Be Less Than 100 Milliseconds	492
	Rule 4: The Top Two Wait Type Values Should Not Include Locking-Related Waits	493
	Using the Dedicated Administrator Connection to Solve Blocking Problems	494
	Additional Performance Factors	499
	Summary	499
	Exam Essentials	500
	Review Questions	501
	Answers to Review Questions	506
Chapter 11	Optimizing Data Storage	509
	Picking the Right Data Type	510
	Understanding Your Data Type Options	511
	Using Data Type Synonyms	516
	Using Data Types	518
	Optimizing Tables, Indexes, Extents, Pages, and Records	520
	Improving Performance through Database Design	521
	Online Transaction Processing versus Online Analytical Processing	521
	Understanding Normalization	522
	Understanding Denormalization	525
	Creating the Smallest Rows Possible	529
	Using Variable-Length Columns Properly	530
	Handling NULLs	534
	Moving beyond the 8KB Row Size Limits	535
	Using the VARCHAR(MAX), NVARCHAR(MAX), and VARBINARY(MAX) Data Types	536
	Storing the Large Value Data Types	541
	Understanding the Row-Overflow Data	545
	Summary	549
	Exam Essentials	549
	Review Questions	551
	Answers to Review Questions	557
Chapter 12	Case Studies	561
	Case Study 1: Sequel Search	563
	Existing Environment	563
	Business Requirements	563
	Technical Requirements	564

xviii Table of Contents

Review Questions	565
Answers to Review Questions	568
Case Study 2: H&S MedX	570
Existing Environment	570
Business Requirements	570
Technical Requirements	570
Review Questions	571
Answers to Review Questions	574
Case Study 3: Sequel Sails	575
Existing Environment	575
Business Requirements	575
Technical Requirements	576
Review Questions	577
Answers to Review Questions	580
Case Study 4: Holly Culture	582
Existing Environment	582
Business Requirements	582
Technical Requirements	583
Review Questions	584
Answers to Review Questions	587

Glossary	589
