

Contents

Preface	xi
Glossary	xvii
1 Wireless Data Communications	1
1.1 Signal representation	2
1.2 Analog to digital conversion	5
1.3 Digital to analog conversion	8
1.4 Architecture of an SDR application	9
1.5 Quadrature modulation and demodulation	11
1.6 Spread spectrum	14
1.7 Antenna	17
1.8 Propagation	19
1.9 Ultrawideband	24
1.10 Energy management	26
1.11 Exercises	26
2 Medium Access Control	29
2.1 Fundamentals of probability and statistics	30
2.1.1 General concepts	30
2.1.2 Random variables and distributions	32
2.1.3 Counting processes	34
2.2 Modeling traffic	37
2.2.1 Delay models	37
2.2.2 Queuing models	38
2.2.3 Birth–death processes	38
2.2.4 $M/M/1/\infty$ queuing system	39
2.2.5 $M/M/m/\infty$ queue: m servers	41
2.2.6 Queues for channel allocation	43
2.2.7 Queues with reserved channels for handoffs	44
2.3 Multiple access	45
2.3.1 Uncoordinated access	46
2.3.2 Contention-based access	47
2.4 Demand assigned multiple access	50
2.4.1 Bit-map	50

2.4.2	Binary countdown	51
2.4.3	Splitting algorithms	51
2.5	Carrier sense multiple access in IEEE 802.11	52
2.5.1	Persistence	53
2.5.2	Collision avoidance	54
2.6	Medium access control in ad hoc networks	55
2.6.1	Neighbor aware contention resolution	56
2.6.2	Multiple access protocols	56
2.6.3	Throughput analysis of NAMA	57
2.7	Bibliographic comments	58
2.8	Exercises	59
3	Ad Hoc Wireless Access	63
3.1	Management of Bluetooth networks	64
3.1.1	Architecture	64
3.1.2	The Bluetooth asymmetric protocol	67
3.1.3	Bluetooth protocol architecture (IEEE 802.15)	70
3.2	Model for node discovery in Bluetooth	71
3.2.1	Avoiding collisions	72
3.2.2	Details of the node discovery model	72
3.2.3	Protocols for node discovery	74
3.2.4	Multiple nodes competing for air-time	80
3.3	Bluetooth formation algorithms	83
3.3.1	Bluetooth topology construction protocol	83
3.3.2	Bluetree	84
3.3.3	Tree scatternet	85
3.3.4	Bluenet	85
3.3.5	Scatternet formation algorithm	86
3.3.6	Loop scatternet	86
3.3.7	Bluestar	87
3.4	Mesh mode of WiMAX/802.16	87
3.4.1	Scheduling	89
3.4.2	Management messages	90
3.4.3	Mesh network	91
3.4.4	Sleep mode	94
3.5	Bibliographic comments	98
3.6	Exercises	99
4	Wireless Network Programming	103
4.1	Structure of information	103
4.2	Socket	105
4.3	Parameters and control	107
4.4	Receiving frames	108
4.5	Sending frames	109
4.6	Exercises	111

5	Ad Hoc Network Protocols	113
5.1	Normal IP routing	114
5.2	The reactive approach	116
5.3	The proactive approach	121
5.4	The hybrid approach	125
5.4.1	Neighbor discovery protocol	125
5.4.2	Intrazone Routing Protocol	127
5.4.3	Interzone routing protocol	130
5.5	Clustering	133
5.6	Quality of service	136
5.7	Sensor Network Protocols	138
5.7.1	Flat routing	139
5.7.2	Hierarchical routing	140
5.7.3	Zigbee	140
5.8	Exercises	143
6	Location Awareness	145
6.1	Geographic proximity	146
6.1.1	Neighborhood graphs	147
6.1.2	Relation between the neighborhood graphs	150
6.2	Constructing spanners of ad hoc networks	151
6.2.1	Gabriel test	151
6.2.2	Morelia test	152
6.2.3	Half-space proximal test	155
6.2.4	Spanner for nodes with irregular transmission ranges	156
6.3	Information dissemination	159
6.3.1	Compass routing in undirected planar graphs	159
6.3.2	Face routing in undirected planar graphs	160
6.3.3	Traversal of quasi-planar graphs	161
6.3.4	Routing in eulerian directed planar graphs	164
6.3.5	Routing in outerplanar graphs	166
6.4	Geographic location determination	167
6.4.1	Radiolocation techniques	167
6.4.2	Computing the geographic location	170
6.4.3	Three/two neighbor algorithm	171
6.4.4	Beyond distance one neighborhood	173
6.5	Random unit disc graphs	174
6.5.1	Poisson distribution in the plane	175
6.5.2	Connectivity and k -connectivity	176
6.5.3	Euclidean MST	178
6.5.4	NNG and k -NNG	179
6.5.5	Delaunay triangulations	179
6.6	Coverage and connectivity with directional sensors	180
6.6.1	Covering circles with sensors	181
6.6.2	Achieving coverage	181

6.7	Bibliographic comments	185
6.8	Exercises	186
7	Ad Hoc Network Security	191
7.1	Authentication techniques	192
7.1.1	Signatures, authentication and hashing	192
7.1.2	Signatures in networking	196
7.1.3	Distribution of keys	201
7.2	Physical layer attacks	202
7.3	Security of application protocols	202
7.3.1	WiFi/802.11 confidentiality	202
7.3.2	ZigBee security	205
7.4	Biometrics-based key establishment	207
7.5	Routing security	211
7.5.1	Routing attacks	211
7.5.2	Preventing malicious packet dropping	213
7.5.3	Secure ad hoc distance vector routing protocol	215
7.6	Broadcast security	217
7.6.1	Issues and challenges	218
7.6.2	BiBa broadcast authentication	218
7.7	Secure location verification	220
7.7.1	Simple echo protocol	221
7.7.2	Echo protocol	222
7.8	Security in directional antenna systems	223
7.8.1	Wormhole attacks and their impact on routing protocols	224
7.8.2	Zoning with directional sensors	225
7.8.3	Protocols for securing neighbor discovery	226
7.9	Bibliographic comments	230
7.10	Exercises	232
	Bibliography	239
	Index	249
