Preface **xiii**

Acknowledgments **xv**

1. Introduction **1**

- 1.1. Optical networks: a brief picture 1
- 1.2. WDM technology 3
- 1.3. WDM network architectures 6
 - 1.3.1. Broadcast-and-select WDM networks 6
 - 1.3.2. Wavelength-routed WDM networks 8
- 1.4. Focus of this book 14
 - 1.4.1. Routing and wavelength assignment 14
 - 1.4.2. Virtual topology design and reconfiguration 15
 - 1.4.3. Lightpath control and management 15
 - 1.4.4. Optical layer survivability 16
 - 1.4.5. IP over WDM 17
- 1.5. Outline of this book 18
- Problems 20
- References 20

2. Fundamentals of WDM Network Devices **23**

- 2.1. Introduction 23
- 2.2. Optical fibers 23
- 2.3. Couplers 27
- 2.4. Optical amplifiers 29
- 2.5. Transmitters 31

2.6.	Receivers	32
2.7.	Optical add/drop multiplexers	33
2.8.	Optical cross-connects	33
2.9.	Wavelength-convertible cross-connects	36
2.10.	Wavelength converters	40
2.11.	Summary	42
	Problems	43
	References	43

3. Routing and Wavelength Assignment 45

3.1.	Introduction	45
3.2.	RWA problem	46
3.2.1.	Static RWA and dynamic RWA	47
3.2.2.	Centralized RWA and distributed RWA	48
3.3.	Static RWA	49
3.3.1.	ILP formulations for SLE without wavelength conversion	49
3.3.2.	ILP formulation for SLE with wavelength conversion	53
3.3.3.	ILP formulation for static routing	54
3.3.4.	Static wavelength assignment	55
3.4.	Dynamic RWA	56
3.4.1.	Routing	57
3.4.2.	Wavelength assignment	59
3.4.3.	RWA algorithms	65
3.5.	RWA for Fairness	68
3.5.1.	Wavelength reservation	70
3.5.2.	Threshold protection	70
3.5.3.	Limited alternate routing	70
3.6.	Wavelength Rerouting	71
3.6.1.	Need for wavelength rerouting	71
3.6.2.	Problems in wavelength rerouting	73
3.6.3.	Lightpath migration operations	73
3.6.4.	Lightpath rerouting schemes	76
3.6.5.	Wavelength rerouting algorithms	80
3.7.	Summary	84

Problems	85
References	85

4. Virtual Topology Design 89

4.1.	Introduction	89
4.2.	Virtual topology design problem	90
4.2.1.	Physical and virtual topologies	92
4.2.2.	Subproblems in virtual topology design	94
4.2.3.	Virtual topology optimization	97
4.3.	Virtual topology design formulation	98
4.3.1.	Terminology	98
4.3.2.	Formulation	99
4.4.	Heuristics	103
4.4.1.	Bounds	104
4.4.2.	Heuristics design	107
4.4.3.	Heuristics for regular topology design	109
4.4.4.	Heuristics for predetermined topology design	114
4.4.5.	Heuristics for arbitrary topology design	116
4.5.	Virtual topology reconfiguration	123
4.5.1.	Reconfiguration for traffic changes	125
4.5.2.	Reconfiguration for topology changes	126
4.6.	Summary	127
	Problems	127
	References	128

5. Distributed Lightpath Establishment 131

5.1.	Introduction	131
5.2.	Problems in distributed lightpath establishment	132
5.2.1.	Routing	133
5.2.2.	Wavelength assignment	135
5.2.3.	Wavelength reservation	135
5.3.	Routing	136
5.3.1.	Explicit routing	136
5.3.2.	Hop-by-hop routing	137
5.3.3.	Flooding-based routing	142

5.4.	Wavelength reservation	142
5.4.1.	Parallel reservation	143
5.4.2.	Sequential reservation	144
5.4.3.	Reservation policies	150
5.5.	Distributed control protocols for lightpath establishment	154
5.5.1.	Source routing with forward reservation	154
5.5.2.	Source routing with backward reservation	155
5.5.3.	Destination routing with backward reservation	156
5.5.4.	Alternate-link routing with backward reservation	157
5.5.5.	Flooding-based routing with backward reservation	158
5.5.6.	Multiple-path routing with backward reservation	159
5.5.7.	Neighborhood-information-based routing with backward reservation	160
5.6.	Summary	161
	Problems	162
	References	163
6.	Optical Layer Survivability	165
6.1.	Introduction	165
6.2.	Need for optical layer survivability	166
6.3.	Protection and restoration for optical layer survivability	168
6.3.1.	Protection for point-to-point WDM links	169
6.3.2.	Static protection and dynamic restoration	171
6.3.3.	Dedicated protection and shared protection	172
6.3.4.	Link protection and path protection	173
6.3.5.	Link restoration and path restoration	176
6.3.6.	Segment protection	178
6.3.7.	Considerations in survivable network design	179
6.4.	Survivable network design for static traffic	180
6.4.1.	Survivable network design problem	180
6.4.2.	ILP formulations	181
6.5.	Survivable routing for dynamic traffic	184
6.5.1.	Dedicated and shared survivable routing	185
6.5.2.	Cost function	185
6.5.3.	Static and dynamic survivable routing	187

6.5.4.	Separate and joint survivable routing	190
6.5.5.	Centralized and distributed survivable routing	192
6.6.	Dynamic restoration	193
6.6.1.	Problems in dynamic restoration	193
6.6.2.	Source-initiated restoration	195
6.6.3.	Destination-initiated restoration	197
6.6.4.	Bi-initiation-based restoration	199
6.6.5.	Multi-initiation-based restoration	202
6.7.	Summary	206
	Problems	207
	References	207
7.	IP over WDM	211
7.1.	Introduction	211
7.2.	IP over WDM layered models	212
7.2.1.	IP over ATM over SONET/SDH over WDM	214
7.2.2.	IP over SONET/SDH over WDM	215
7.2.3.	IP over WDM	216
7.3.	IP over WDM network model	217
7.3.1.	Network model	217
7.3.2.	UNI and NNI	218
7.4.	IP over WDM service models	219
7.4.1.	Domain service model	219
7.4.2.	Unified service model	220
7.5.	IP over WDM interconnection models	221
7.5.1.	Overlay model	221
7.5.2.	Peer model	222
7.5.3.	Augmented model	223
7.6.	Control plane for optical networks	224
7.6.1.	Requirements for optical control plane	224
7.6.2.	MPLS-based optical control planes	225
7.7.	Multiprotocol Label Switching	226
7.7.1.	Packet forwarding and label swapping	226
7.7.2.	Routing and path establishment	228
7.7.3.	Traffic engineering with MPLS	228

7.8.	Multiprotocol Lambda Switching	230
7.8.1.	Analogy between MPLS and MPLmS	230
7.8.2.	Extensions to routing and signaling protocols	231
7.9.	Generalized Multiprotocol Label Switching	232
7.9.1.	Forwarding hierarchy	233
7.9.2.	Link bundling	235
7.9.3.	Unnumbered links	236
7.9.4.	Extensions to routing and signaling protocols	236
7.9.5.	Link management protocol	238
7.10.	Survivability in IP over WDM networks	239
7.10.1.	Survivability in WDM networks	239
7.10.2.	Survivability in IP networks	241
7.10.3.	Multilayer survivability in IP over WDM networks	243
7.11.	Summary	245
	Problems	246
	References	247
8.	Future Trends in Optical Networks	251
8.1.	Introduction	251
8.2.	IP over WDM	253
8.3.	Optical packet switching	254
8.4.	Optical burst switching	256
8.5.	Optical metro networks	258
8.6.	Optical access networks	260
	Problems	261
	References	261
	Appendices	265
A.	Basics of graph theory	265
B.	<i>Dijkstra's</i> Algorithm	269
C.	Acronyms	273
	Index	277
