

Contents at a Glance

<i>Introduction</i>	1
<i>Part I: Getting Started with Perl</i>	5
Chapter 1: Perl's Place in the Programming World	7
Chapter 2: Running Perl on Your Computer	17
Chapter 3: Diving into the Guts of Perl	35
Chapter 4: A Perl Program Tour, Times Two	51
<i>Part II: The Basic Perl Programming Ingredients</i>	69
Chapter 5: Terrific Text	71
Chapter 6: Nifty Numbers	91
Chapter 7: Learning to Love Lists and Hashes	103
Chapter 8: Creating Cool Conditionals and Lovely Loops	133
Chapter 9: Doing Advanced Stuff with Operators and Functions	151
<i>Part III: The Nuts and Bolts of Perl</i>	169
Chapter 10: The Files Go In, The Files Go Out	171
Chapter 11: Beyond File and Directory Basics	189
Chapter 12: Stringing Along: Pattern Matching and Regular Expressions	201
Chapter 13: Looking Like a Pro: Subroutines, Imported Code, and Graceful Exits	223
<i>Part IV: Advanced Perl Demystified</i>	239
Chapter 14: Perl and CGI: Web Server Programs Demystified	241
Chapter 15: Perl Gets Cozy with the Web, E-Mail, and the Rest of the Internet	263
Chapter 16: Using Perl as a Gateway to XML and Web Services	277
Chapter 17: Dancing with Databases	295
Chapter 18: Controlling Your Computer from Perl	299
Chapter 19: Object-Oriented Perl	305
<i>Part V: The Part of Tens</i>	315
Chapter 20: Ten Guidelines for Programming with Style	317
Chapter 21: Ten Really Short, Really Useful Perl Programs	325

<i>Part VI: Appendix</i>	331
Appendix: The Great Perl Reference.....	333
<i>Index</i>	361

Table of Contents

<i>Introduction</i>	1
Who You Are	1
What You Need to Know First	2
What You'll Find in This Book	2
Part I: Getting Started with Perl	2
Part II: The Basic Perl Programming Ingredients	3
Part III: The Nuts and Bolts of Perl	3
Part IV: Advanced Perl Demystified	3
Part V: The Part of Tens	3
Part VI: Appendix	3
A Word about Program Examples	4
Icons Used in This Book	4
<i>Part 1: Getting Started with Perl</i>	5
Chapter 1: Perl's Place in the Programming World	7
Understanding the Purpose of Programming	8
Making Computers Compute	9
Translating Your Language into Computer Language	10
Designing Computer Languages	11
Appreciating the Benefits of Perl	13
Many Versions, One Perl	14
Differentiating Between Perl 5 and Perl 5.6	15
Exploring the New Features of Perl 5.8	16
Chapter 2: Running Perl on Your Computer	17
Perl Isn't Just for UNIX Anymore	17
Playing the name game	18
Getting the latest from the Internet	18
UNIX: Perl's First Home	18
Determining whether you need to install Perl on UNIX	18
Installing Perl on UNIX	20
Running Perl programs under UNIX	21
ActivePerl on Windows	22
Installing ActivePerl under Windows	23
Running ActivePerl in a command prompt window	23

Perl for Mac Users	26
Running Perl in Mac OS X	26
Installing MacPerl in Mac OS 9	26
Running MacPerl programs	27
Working with Perl on the Command Line	28
Entering command line options	28
Checking syntax with the -c option	29
Looking for errors with the -w option	29
Identifying versions of Perl with the -v option	29
Running one-liners with the -e option	30
Debugging with the -d option	30
Other Perls	30
Utilizing the Comprehensive Perl Archive Network	31
Working with the ActivePerl Package Manager	31
Getting Help	33
Chapter 3: Diving into the Guts of Perl	35
Grabbing a Text Editor	35
Examining Some Basic Components of a Perl Program	36
Executing a statement	36
Making a loop	36
Inserting a comment	37
Creating Perl Programs Using Statements	38
Ending statements	39
Understanding the role of blocks	40
Introducing operators and functions	42
Keeping Tabs on Statements: Indenting and Spacing	43
Indenting blocks	43
Adding extra spacing for the fun of it	45
A Five-Minute Guide to Numbers and Text	45
Working with Variables and Literals	46
Assigning variables	48
Using Perl's special variables	49
Default arguments	49
Chapter 4: A Perl Program Tour, Times Two	51
Examining the Inside of a Sample Program	51
Running the counter1.pl sample program	57
Viewing the program results	59
Exploring a Program with More Features	59
Breaking down the sample program	61
Running the empdata1.pl sample program	65
Avoiding the Most Common Oversights	66
Forgetting a semicolon	66
Forgetting a quotation mark	67
Entering one parenthesis too many or too few	67

Part II: The Basic Perl Programming Ingredients 69**Chapter 5: Terrific Text 71**

Checking Your Work: The print Statement	72
Defining Strings	72
Differentiating between Visible Characters and Character Values	73
Translating values to characters	73
Recognizing defined and undefined values	74
Examining the 93 standard visible characters	74
Using special characters in text	76
Quoting Text	78
Contrasting single and double quotes	79
Using functions to quote text	80
Quoting large blocks of text	81
Being aware of the @ Gotcha!	81
Manipulating Strings	82
Combining strings	83
Making lots of copies	84
Zapping the end of a string	84
Performing Simple String Transformations	85
Getting Information from Strings	86
Writing for the World in Perl 5.6 and Perl 5.8	86
Introducing Unicode and UTF-8	87
Entering UTF-8 in your programs	88
Using international characters	89
Appreciating the Unicode in Perl 5.8	89

Chapter 6: Nifty Numbers 91

Contrasting Integers and Real Numbers	91
Using Perl's Basic Math Operators	92
Using operators for simple calculations	93
Utilizing parentheses in algebraic calculations	93
Working with the positive and negative value operator	94
Using the exponential calculations operator	94
Introducing the modulo arithmetic calculator	95
Doing Math and an Assignment at the Same Time	95
Autoincrementing and Autodecrementing	96
Employing Simple Numeric Functions	98
Converting Numbers into Strings	99
Working with Really Big Numbers	99
Counting in Nondecimal Number Systems	101

Chapter 7: Learning to Love Lists and Hashes 103

Listing the Basics	103
Constructing basic lists	104
Creating literal lists	104
Understanding variable names	105
Considering null lists	105

Specifying Elements and Slices of Lists	106
Using Lists to Simplify Basic Tasks	107
Using the print Statement with Lists	109
Adding and Removing List Elements	110
Adding elements to a list with the push and unshift functions	110
Removing elements from a list with the shift and pop functions	111
Adding and removing elements from a list with the splice function	111
Splitting Strings with the split Function	114
Using Scalar Variables	116
Employing Existing Lists	116
Distinguishing Context Types	116
Using List::Util in Perl 5.8	118
Understanding the Basics of Working with Hashes	120
Locating items by their keys	120
Comparing hashes with standard lists	121
Creating a hash	122
Adding records to a hash	122
Removing records	123
Examining records with the keys function	123
Returning values with the values function	123
Stepping with the each function	124
Checking for any existing records	124
Writing Hash Data to a File	124
Creating Multidimensional Lists	125
Creating two-dimensional lists	126
Accessing list elements one piece at a time	127
Adding rows and columns to two-dimensional lists	128
Creating Hashes Consisting of Lists	130
Writing the Files for Lists within Lists	131
Text files for two-dimensional lists of lists	131
Text files for more complicated lists of lists	131
Chapter 8: Creating Cool Conditionals and Lovely Loops	133
Exploring Basic Logic Statements	133
Using the math operators	134
Using the string operators	135
Working with three-value compare statements	136
Linking conditional tests	136
Using the not operator	137
Using the xor operator	137
Working with Conditional Statements	138
The else and elsif statements	138
The unless statement	139
Conditional operators	139

Going Around in Loops	139
Looping with the while statement	140
Avoiding infinite loops	140
Navigating with the next and last statements	141
Utilizing the for statement	142
Using the map statement with lists	144
Creating switch structures in Perl 5.8	145
Using Expressions as Logical Values	146
Opening files with the open function	146
Short-circuiting	147
Caveat Emptor: Jumping around Programs by Using Labels	148

Chapter 9: Doing Advanced Stuff with Operators and Functions 151

Using Undefined Variables	151
Looking for Strings within Strings	152
Using the substr function	152
Using the index function	154
Using the rindex function	154
Applying Some Fancy Formatting to Text and Numbers	155
Tracking Time	161
Picking Random Numbers	164
Shifting Bits with Bit-Level Operators	164
Converting Lists to Strings	166
Rearranging Lists	167

Part III: The Nuts and Bolts of Perl 169

Chapter 10: The Files Go In, The Files Go Out 171

Understanding Perl File Types	171
Opening and Closing Files	172
Giving a file a handle	173
Reading, writing, or appending: Choosing a file opening mode	173
Determining whether a file really opened	175
Using files after they're opened	175
Closing files	176
Specifying Filenames and DirectoryPaths for Various Operating Systems	176
Reading from a Text File the Easy Way	178
Writing Text to a File the Easy Way	181
Running Tests to Get Information on a File	182
Moving File Streams in UNIX: Standard In, Standard Out, and Standard Error	185
Distinguishing the big three file streams	185
Piping data in and out of a program	186

Chapter 11: Beyond File and Directory Basics 189

Reading from and Writing to Binary Files	189
Keeping track of your position in a file	190
Writing to a binary file	191
Forcing binary reads	192
Reading one character at a time	192
Changing File Characteristics	192
Renaming files	193
Changing file access and modification times	193
Deleting files	194
Grouping Filenames by Matching Characters	194
File Features Strictly for UNIX Users	195
Working with Perl's version of chown and chmod	196
Creating links with functions	196
Getting the Nitty-Gritty Stats on Files	197
Working with Directories of Files	198
Opening directories	198
Returning filenames in a directory	199
Walking through directories	199
Creating and destroying directories	200

Chapter 12: Stringing Along: Pattern Matching and Regular Expressions 201

Working with Regular Expressions	202
Conducting true-false searches with the m// operator	202
Tightening up your statements	203
Accounting for those special metacharacters	204
Making Inexact Matches in Regular Expressions	205
Alternating matches	205
Enclosing similar items in parentheses	206
Matching characters by using a wildcard	206
Matching character classes	206
Searching the Beginning or End of a String	208
Using Quantifiers for Numerical Matches	209
Getting the Match Results	211
More Programming Magic with the m// Operator	212
Using m// operator modifiers	213
Doing global searches in the m// operator	214
Searching for multiple lines in a string	216
Using the grep Function	216
Doing Simple Substitutions with the s/// Operator	217
Using match results in your substitutions	218
Using expressions in the replacement text of s///	218
Using the split Function with More-Advanced Regular Expressions.....	219
Quoting words	220
Returning delimiters in split	220
Using the tr/// Operator	221

Chapter 13: Looking Like a Pro: Subroutines, Imported Code, and Graceful Exits	223
Saving Steps with Subroutines	223
Structuring a subroutine	224
Saving on labor and avoiding errors with subroutines	225
My, what a local variable you have: Using the my and local functions	226
Returning a value from a subroutine	229
Importing Prewritten Perl Code into Your Programs	231
Adding a required statement for included files	232
Helping Perl search your libraries for included files	233
Wrapping your programs in packages	235
Including code other than subroutines	235
Ending Perl Programs Gracefully	236
Using the die function	236
Using the exit function	237
Structuring die and exit statements	237

Part IV: Advanced Perl Demystified **239**

Chapter 14: Perl and CGI: Web Server Programs Demystified	241
Writing CGI Programs in Perl	242
Using Environment Variables	243
Getting at variables	244
Posing a query	245
Determining the source of a request	245
Gathering Information from HTML Forms	246
Using GET and POST to Collect Form Data	248
Splitting apart a strung-together response	248
Picking values to use as Perl variables	249
Displaying Output to the User	250
Displaying information directly using print statements	251
Using the CGI module to display to the user	252
Creating an HTML Form	253
Using Redirection to Link to Other Sites	255
Exploring a Few Other Environment Variables	259
Gathering additional client information	259
Collecting server information	259
Authenticating the user	260
Working with Apache and Perl	260
Introducing mod_perl	260
Using mod_perl	261
Handling CGI and HTML with Mason	261

Chapter 15: Perl Gets Cozy with the Web, E-Mail, and the Rest of the Internet	263
Using the libwww-perl Library	264
Installing libwww-perl on UNIX	264
Getting documents from the Web and FTP	265
Testing Web links with a Perl program	266
Using libwww-perl with objects	268
Getting Your E-Mail	269
Accessing the Mail::POP3Client module	270
Creating a simple client object	270
Examining a program for processing reports in your mailbox.	271
Pinging with Perl	273
Using Net::FTP to Grab Files	274
Delving into Domain Names with Perl	276
Chapter 16: Using Perl as a Gateway to XML and Web Services.	277
Exploring the Role of Perl and XML in Web Programming	277
Introducing XML	278
Examining an XML document	278
Combining XML and Perl	280
Checking a Document for Accuracy	281
Introducing XML::Parser and XML::Simple	281
Parsing an XML file	282
How Do You Want to Read It?	283
Parsing XML as a stream	284
Parsing XML as a tree	287
Writing an XML Document	289
Reading and Writing XML in Other Ways	291
Looking into Web Services	292
Connecting Web Services and Perl	293
Chapter 17: Dancing with Databases	295
Managing Databases Using Hashes	295
Opening Databases	296
Closing Databases	296
Tips on Opening and Closing Databases	297
Chapter 18: Controlling Your Computer from Perl	299
Getting with the System	299
Getting output from a program	300
Using the open function	301
Running programs in MacPerl	301
Controlling a Windows or Mac Computer with Perl	302
Using UNIX-Only System Functions	303
Reading user databases	303
Accessing group databases	304

Chapter 19: Object-Oriented Perl	305
Understanding the Advantages Object-Oriented Programming	305
Defining Objects, Methods, and Arguments	307
Perl's Objects Made Easy	308
Opening a Perl module with the use function	308
Making new objects with the new subroutine	309
Invoking an object's methods	310
Considering a Real-World Object Example	310
 Part V: The Part of Tens	 315
 Chapter 20: Ten Guidelines for Programming with Style	 317
Examining the Perl Creator's Style Preferences	317
Choosing Your Operator	319
Parentheses Are Your Friends	319
Flexible Ordering for Conditionals	320
Commenting about Comments	321
Standout Line Treatments	322
Comments Cohabiting with Code	322
Naming Your Variables Descriptively	323
Capital Offense, or Not?	323
The Beauty of Blank Lines	324
 Chapter 21: Ten Really Short, Really Useful Perl Programs	 325
Collecting Unique Lines	325
Getting Rid of Multiple Blank Lines	325
Printing Lines from a File in Sorted Order	326
Printing a Range of Lines from a File	326
Listing Just the Files in a Directory	327
Listing a Directory by Size	327
Sorting Directories by Extension	327
Creating a Simple Calculator	328
Randomizing a List	328
Generating Random Mnemonic Passwords	329
 Part VI: Appendix	 331
 Appendix: The Great Perl Reference	 333
Perl Operators	333
Perl's Operator Hierarchy	335
Perl's Functions and Statements	336

Perl's Special Variables	357
General-purpose variables	357
Variables that relate to errors and return values	358
Special variables for regular expressions	358
Variables that relate to processes	358
Variables for formats	359
Miscellaneous variables	359
Perl's Predefined File Handles	360
<i>Index</i>	361
