Notes to the Teacher	xiii
----------------------------	------

Section 1:	NUMERATION AND NUMBER PROPERTIES	1
-------------------	-----------------------------------------------	----------

Objectives

1. Order three or more whole numbers up to ten thousands	1
2. Identify odd and even whole numbers	14
3. Form a generalization of the pattern found in a given ordered set (or sequence) of whole numbers, then generate more members of that set using that generalization	22
4. Round whole numbers to the nearest ten, hundred, or thousand ...	30
5. Represent a proper fraction with various models (physical, pictorial)	42
6. Find equivalent fractions that are less than one.	50
7. Compare and order two proper fractions, using models (physical, pictorial)	59
8. Match numerals or number names of decimals involving tenths and hundredths with their equivalent word names (including mixed numbers)	69
Practice Test.....	79

Section 2:	COMPUTATIONAL ALGORITHMS AND ESTIMATION IN PROBLEM SOLVING	83
-------------------	-------------------------------------------------------------------------	-----------

Objectives

1. Add or subtract whole numbers (two-digit to four-digit) to solve a word problem	83
------------------------------------------------------------------------------------------	----

2. Multiply two-digit whole numbers by one-digit or two-digit whole numbers (as multipliers) to solve single-stepped word problems	99
3. Divide two-digit or three-digit whole numbers by one-digit whole numbers (as divisors) to solve a single-stepped word problem	115
4. Solve multistep word problems, using addition, subtraction, multiplication, or division of whole numbers	131
5. Estimate a solution to a word problem, using rounding and whole number addition with two or more addends	139
6. Estimate a solution to a word problem, using rounding and subtraction of whole numbers	150
7. Estimate a solution to a word problem, using rounding and multiplication of whole numbers	162
8. Add or subtract four-digit decimals (tens to hundredths)	171
Practice Test	187

Section 3:

GRAPHING, STATISTICS, AND PROBABILITY	193
--------------------------------------------------------	------------

Objectives

1. Complete a two-column (or two-row) numerical table, using recognized patterns in the column (or row) entries, in order to solve word problems	193
2. Identify a set of points on a number line, using <i>greater than</i> and <i>less than</i>	200
3. Find the mean of a set of data	209
4. Construct, interpret, and apply pictographs	217
5. Construct, interpret, and apply (single) bar graphs	225
6. Construct, interpret, and apply (broken) line graphs	232
7. Use a pair of numbers to compare favorable outcomes to all possible outcomes of a single-staged experiment or situation, and identify which outcome has the greater chance of occurring	238
8. Identify possible two-member or three-member outcomes of a situation (multistaged experiment without order)	245
Practice Test	251

Section 4:	GEOMETRY AND LOGICAL OR SPATIAL REASONING 257
-------------------	----------------------------------------------------------------

Objectives

1. Make generalizations from geometric sets of examples and nonexamples 257
 2. Use reflections to identify planar shapes having a line of symmetry 264
 3. Identify congruent planar shapes by using rotations, reflections, or translations 271
 4. Identify polygons by their generic names 277
 5. Identify right, acute, and obtuse angles 283
 6. Describe rectangles (including squares) by their characteristics (sides, diagonals, angles) 290
 7. Identify 3-dimensional shapes (solids) by their names and by specific characteristics, such as faces, vertices, or edges 297
 8. Apply logical reasoning to solve a word problem (with or without computation) 303
- Practice Test 311**

Section 5:	MEASUREMENT 317
-------------------	----------------------------------

Objectives

1. Estimate the length of an object, using an appropriate measuring unit (inch, foot, yard, millimeter, centimeter, meter) 317
 2. Estimate the capacity of a container, using an appropriate measuring unit (milliliter, liter, cup, pint, quart, gallon) 323
 3. Estimate the weight of an object, using an appropriate measuring unit (ounce, pound, gram, kilogram) 330
 4. Define the relationship between two units of measure within the same system of measurement 336
 5. Solve problems that involve the passing of time and the notation for time shown on a clock 346
 6. Find and apply the perimeter of a rectangle to solve a word problem 357
 7. Find the area of a rectangular region 364
 8. Find or estimate the area of an irregular plane figure by counting square units or using the areas of rectangles 370
- Practice Test 378**
