### Part I Introduction to Autophagy

- 1 Overview of Autophagy 3**  
*Julie E. Legakis and Daniel J. Klionsky*
- 1.1 Overview of Autophagy 3
- 1.2 The Discovery of Autophagy 5
- 1.3 Mechanistic Aspects of Autophagy 7
- 1.3.1 Induction 9
- 1.3.2 Cargo Selection and Packaging 10
- 1.3.3 Vesicle Nucleation 11
- 1.3.4 Vesicle Expansion and Completion 11
- 1.3.5 Retrieval 12
- 1.3.6 Targeting, Docking and Fusion of the Vesicle with the Lysosome/  
 Vacuole 12
- 1.3.7 Breakdown of the Vesicle and its Cargo 12
- 1.4 Autophagy and Immunity 13
- References 14
- 2 Cell Biology and Biochemistry of Autophagy 19**  
*Edmond Chan, Robert Köchl and Sharon A. Tooze*
- 2.1 Introduction 19
- 2.2 Autophagic Pathway 20
- 2.2.1 Formation of Autophagosomes 20
- 2.2.2 Fusion of AV with Endocytic Pathways and Maturation 22

2.2.3	Endosomes and Lysosomes	25
2.3	Regulation of Mammalian Autophagy by Amino Acids and Hormones	27
2.3.1	Amino Acids	28
2.3.2	Hormones	30
2.3.3	Longer-term Regulation	31
2.3.4	The Nutrient Sensor Target of Rapamycin (TOR)	32
2.3.5	Upstream of TOR	36
2.3.6	Downstream of TOR	38
2.4	Methods to Measure Autophagy	41
2.4.1	Microscopic Methods	42
2.4.1.1	Electron Microscopy	42
2.4.1.2	Light Microscopy	42
2.4.2	Biochemical Methods	45
2.4.2.1	Formation and Induction	45
2.4.2.2	Fusion	46
2.4.2.3	Purification of Autophagosomes from Rat Liver	47
2.4.2.4	Inhibition of Autophagy	47
2.4.2.5	Common Questions	48
2.4.3	Summary and Outlook	48
	References	49
<b>3</b>	<b>Transgenic Models of Autophagy</b>	<b>55</b>
	<i>Noboru Mizushima</i>	
3.1	Molecular Mechanism of Mammalian Autophagy	55
3.1.1	Atg12 Conjugation System	55
3.1.2	Atg8/Microtubule-associated Protein 1 Light Chain 3 (LC3) Conjugation System	56
3.1.3	Class III Phosphatidylinositol-3-kinase (PI3K) Complex	57
3.1.4	Atg1 Kinase Complex	57
3.1.5	Other Factors	58
3.2	Autophagy Indicator Mice: Green Fluorescent Protein (GFP)–LC3 Transgenic Mice	58
3.3	Mouse Models Deficient for Autophagy-related Genes	60
3.3.1	Atg5-deficient Mice	61
3.3.2	Atg7-deficient Mice	63
3.3.3	Beclin 1-deficient Mice	63
3.4	Concluding Remarks	64
	References	64
<b>4</b>	<b>Autophagy in Disease and Aging</b>	<b>69</b>
	<i>Marta Martinez-Vicente, Susmita Kaushik and Ana Maria Cuervo</i>	
4.1	Introduction	69
4.2	Autophagy in Neurodegenerative Disorders	70
4.2.1	Protein Misfolding and Aggregation	71

4.2.2	Parkinson's Disease	73
4.2.3	Alzheimer's Disease	75
4.2.4	Huntington's Disease	76
4.2.5	Prion Diseases	77
4.2.6	Niemann–Pick Type C	78
4.3	Autophagy and Cancer	79
4.3.1	Proteolysis of long-lived Proteins and Effect of Nutrient Deprivation in Cancer Cells	79
4.3.2	Autophagic Cell Death in Response to Anticancer Treatment	80
4.3.3	Molecular Mechanisms	82
4.3.3.1	Beclin 1	82
4.3.3.2	PI3K–Akt–mTOR Pathway	82
4.3.4	Possible Therapeutic Attempts	84
4.4	Myopathies	85
4.4.1	Danon Disease	85
4.4.2	XMEA	86
4.4.3	Rimmed Vacuolar Myopathies	86
4.4.4	Other Myopathies	87
4.4.5	Cardiomyopathies and Myocardial Cell Death	87
4.5	Liver Diseases	88
4.6	Diabetes Mellitus	89
4.7	Aging	90
4.7.1	Changes in Protein Degradation with Age	90
4.7.2	Age-related Changes in Autophagy	91
4.7.3	Consequences of the Failure of Autophagy in Aging	93
4.7.4	Slowing Down Aging?	94
4.8	Concluding Remarks and Pending Questions	94
	References	95

## **5 The Dual Roles for Autophagy in Cell Death and Survival 105**

*Yayanta Debnath and Christopher Fung*

5.1	Introduction	105
5.2	Types of Programmed Cell Death	106
5.2.1	Type 1 Programmed Cell Death	106
5.2.2	Type 2 Programmed Cell Death	106
5.2.3	Type 3 Programmed Cell Death	107
5.2.4	Other Types of Programmed Cell Death	107
5.3	The Contribution of Autophagy to Programmed Cell Death	108
5.3.1	Death Processes That Require <i>atg</i> Genes	108
5.4	The Combined Activation of Autophagy and Apoptosis during Programmed Cell Death	110
5.5	Emerging Relationships between Apoptosis and Autophagy	112
5.6	Autophagy and Cell Survival	113
5.6.1	Autophagy is Cytoprotective during Nutrient Depletion in Mammalian Cells	114

- 5.6.2 Autophagy and Neuroprotection 115
- 5.6.3 Cytoprotective Roles of Autophagy in the Response to Infectious Pathogens 116
- 5.7 Autophagy and Organism Survival 118
- 5.8 Concluding Remarks 119
- Acknowledgments 119
- References 120

## Part II Autophagy and Bacteria

- 6 Autophagy and *Mycobacterium tuberculosis* 129**  
*James Harris, Sergio De Haro and Vojo Deretic*
  - 6.1 Introduction 129
  - 6.2 *M. tuberculosis* Blocks Phagolysosome Biogenesis in Macrophages 130
  - 6.3 Autophagy and the Host Response to *M. tuberculosis* 131
  - 6.4 Regulation of Autophagy by the Immune System 133
  - 6.5 p47 GTPases and Autophagy 134
  - 6.6 Future Directions 135
  - References 136
- 7 Autophagy Eliminates Group A *Streptococcus* Invading Host Cells 139**  
*Atsuo Amano and Tamotsu Yoshimori*
  - 7.1 Group A *Streptococcus* (GAS; *Streptococcus pyogenes*) 139
  - 7.2 Adherence to Host Cells by GAS 139
  - 7.3 Invasion of Host Cells by GAS 140
  - 7.4 Survival of Intracellular Bacteria 141
  - 7.5 Streptolysin O (SLO) Enables GAS to Escape from Phagocytic/Endocytic Degradation 141
  - 7.6 Autophagy 142
  - 7.7 Intracellular GAS is Trapped by Autophagosome-like Compartments 142
  - 7.8 Atg5 is Required for Capture and Killing of GAS 144
  - 7.9 GcAVs Fuse with Lysosomes for Degradation 147
  - 7.10 Conclusion and Perspective 147
  - References 149
- 8 *Shigella* Invasion of Host Cells and Escape from Autophagy 151**  
*Michinaga Ogawa and Chihiro Sasakawa*
  - 8.1 *Shigella* Invasion of Epithelia 151
  - 8.2 *Shigella* Disseminate among Epithelial Cells 152
  - 8.3 *Shigella* Infection Elicits an Inflammatory Response 154
  - 8.4 *Shigella* that do not Produce IcsB Undergo Autophagic Degradation 154

8.5	<i>Shigella</i> VirG is a Target for Autophagy, but is Camouflaged by its IcsB	156
8.6	Perspective	157
	References	158
<b>9</b>	<b><i>Listeria monocytogenes</i>: A Model System for Studying Autophagy</b>	<b>161</b>
	<i>Kathryn A. Rich and Paul Webster</i>	
9.1	Listeriosis	161
9.2	Invasion of Mammalian Cells by <i>L. monocytogenes</i>	161
9.3	Autophagy	164
9.4	The Ideal Target for Studying the Early Stages of Autophagy	165
9.5	Why Other Organisms may not be as Useful to Study the Autophagic Process	167
9.6	Assembly of AVs may Result from Fusion of Cytoplasmic Membrane Structures	169
9.7	Pathogenic Cytoplasmic Bacteria can avoid the Autophagic Pathway	171
9.8	Cellular Fate of Metabolically Inhibited <i>L. monocytogenes</i>	173
	References	174
<b>10</b>	<b><i>Coxiella burnetii</i> Hijacks the Autophagy Pathway to Survive</b>	<b>179</b>
	<i>Maximiliano G. Gutierrez and María I. Colombo</i>	
10.1	Introduction	179
10.2	<i>Coxiella burnetii</i>	179
10.3	Bacterium Morphology and Phylogeny	180
10.4	Lipopolysaccharide (LPS) and Phases	180
10.5	Genome and Genetics	181
10.6	Host Response and Immunity	181
10.7	Developmental Cycle of <i>C. burnetii</i> : Small Cell Variant (SCV) and Large Cell Variant (LCV)	183
10.8	<i>C. burnetii</i> Type IV Secretion System	184
10.9	Interaction with the Endocytic and Autophagic Pathways	185
10.10	Contribution of Autophagy to RV Development	189
10.11	Autophagy and Bacterial Differentiation from SCVs to LCVs	192
10.12	Unanswered Questions and Future Perspectives	194
	Acknowledgments	195
	References	195
<b>11</b>	<b>Utilization of Endoplasmic Reticulum Membranes to Establish a Vacuole that Supports Replication of <i>Legionella pneumophila</i></b>	<b>199</b>
	<i>Mary-Pat Stein and Craig R. Roy</i>	
11.1	Introduction	199

11.2	Evidence that <i>Legionella</i> Utilizes the Autophagy Machinery for Biogenesis of a Replicative Organelle	201
11.2.1	Induction of Autophagy	201
11.2.2	Formation of Autophagosomes	202
11.2.3	Maturation of Autophagosomes and Fusion with Lysosomes	204
11.3	Evidence that the Host Autophagy Machinery is not Essential for Transport or Growth of <i>Legionella</i>	205
11.3.1	<i>Dictyostelium discoideum</i> Autophagy Mutants Support <i>Legionella</i> Growth	205
11.3.2	Morphological Differences between LCVs and Autophagosomes	205
11.3.3	Differences Between <i>Legionella</i> and Other Bacteria that Utilize Autophagy for Intracellular Survival	206
11.4	Creation of an ER-derived Vacuole that Supports <i>Legionella</i> Replication by Subversion of the Host Secretory Pathway	207
11.5	Conclusion	208
	References	209

### Part III Autophagy and Viruses

<b>12</b>	<b>Endogenous Major Histocompatibility Complex Class II Antigen Processing of Viral Antigens</b>	<b>213</b>
	<i>Dorothee Schmid and Christian Münz</i>	
12.1	Introduction	213
12.2	Classical Pathways of Antigen Processing for MHC Presentation	214
12.3	Endogenous MHC Class II Antigen Processing of Viral Antigens	215
12.4	Autophagic Delivery of Antigens for Lysosomal Degradation and MHC Class II Presentation	216
12.5	Similarities Between Sources of MHC Class II Ligands and Autophagy Substrates	218
12.6	Overlap Between the Vesicular Transport Pathways of Autophagosomes and MHC Class II Loading Compartments	219
12.7	Possible Functions of MHC Class II Presentation after Autophagy in the Immune Control of Viral Infections	220
12.8	Future Directions of Research into Endogenous MHC Class II Antigen Processing	221
12.9	Summary	222
	Acknowledgments	222
	References	222
<b>13</b>	<b>Autophagy in Antiviral Host Defense</b>	<b>227</b>
	<i>Beth Levine</i>	
13.1	Introduction	227
13.2	Role of Antiviral Signaling Pathways in Autophagy Regulation	227

13.2.1	PKR is Required for Virus-induced Autophagy	227
13.2.2	IFN- $\gamma$ Stimulates Autophagy	230
13.3	Role of Mammalian Autophagy Genes in Antiviral Host Defense	231
13.4	Role of Plant Autophagy Genes in Antiviral Host Defense	233
13.5	Evasion of Autophagy by Viruses	234
13.6	How Might Viral Evasion of Autophagy Contribute to Viral Pathogenesis?	236
13.7	Autophagy and Antigen Presentation	237
13.8	Concluding Remarks	238
	References	239

**Addendum** 242

*Jennifer Sparks and Mark R. Denison*

**Subject Index** 243
