

# Contents

<b>Introduction</b>	<b>xxiii</b>
<b>Chapter 1: Building Web Applications in WebLogic</b>	<b>1</b>
<b>Java Servlets and JSP Key Concepts</b>	<b>1</b>
Characteristics of Servlets	1
Characteristics of JavaServer Pages	7
<b>Web Application Best Practices</b>	<b>13</b>
Ensure Proper Error Handling	13
Use JSTL Tags to Reduce Scriptlet Code	15
Use Custom Tags for Selected Behaviors	19
Use Servlet Filtering for Common Behaviors	22
Creating Excel Files Using Servlets and JSP Pages	26
Viewing Generated Servlet Code	30
<b>Chapter Review</b>	<b>30</b>
<b>Chapter 2: Choosing a Web Application Architecture</b>	<b>31</b>
<b>Architecture Key Concepts</b>	<b>31</b>
Java EE Application Tiers	31
Model-View-Controller Architecture	32
Common Java EE Design Patterns	33
<b>Presentation-Tier Architecture Selection</b>	<b>33</b>
Presentation-Tier Requirements	34
Other Architecture Considerations	45
<b>Candidate Presentation-Tier Architectures</b>	<b>46</b>
JSP-Centric Architecture	46
Servlet-Centric Architecture: Struts	48
Servlet-Centric Architecture: Spring MVC	50
<b>Chapter Review</b>	<b>53</b>
<b>Chapter 3: Designing an Example Java EE Application</b>	<b>55</b>
<b>Application Requirements</b>	<b>55</b>
<b>Business Domain Models</b>	<b>56</b>

## Contents

---

<b>Presentation Requirements</b>	<b>57</b>
<b>Web Application Architecture</b>	<b>59</b>
<b>Presentation Approach</b>	<b>60</b>
Self-Assembly	61
Master Page Assembly	64
External View Assembly with Tiles Framework	66
<b>Business-Tier Interfaces</b>	<b>67</b>
Controllers Call Business Services	68
Controllers Populate Forms for JSPs	69
Updates Require Explicit Service Calls	71
Relationships in Presentation Components	71
<b>Chapter Review</b>	<b>72</b>
<b>Chapter 4: Building an Example Web Application</b>	<b>73</b>
<b>Overview of Application Components</b>	<b>73</b>
<b>Constructing the Application Skeleton</b>	<b>75</b>
<b>Constructing the User Site Components</b>	<b>76</b>
Reservation Information Components	76
Core Reservation Process Components	79
Targeted Offers Components	103
<b>Construction of Administration Site Components</b>	<b>105</b>
Authentication/Authorization Components	105
Property Maintenance Components	108
<b>Chapter Review</b>	<b>123</b>
<b>Chapter 5: Packaging and Deploying WebLogic Web Applications</b>	<b>125</b>
<b>Packaging Web Applications</b>	<b>125</b>
Web Application Directory Structure	126
Web Application Descriptor Files	128
Precompiling JSP Components	137
Creating an Exploded Web Application	139
Creating a Web Application Archive File	144
<b>Deploying Web Applications</b>	<b>145</b>
Automatic Deployment	145
WebLogic Deployer Utility and Ant Task	148
WebLogic Console Deployment	150
Creating Required Users and Groups for <code>BigRez.com</code>	152
<b>Chapter Review</b>	<b>153</b>

<b>Chapter 6: Building Enterprise JavaBeans in WebLogic Server</b>	<b>155</b>
<b>EJB Technology Overview</b>	<b>155</b>
<b>EJB 3.0</b>	<b>156</b>
The Spring Framework	157
<b>EJB Component Types</b>	<b>157</b>
Stateless Session Beans	158
Stateful Session Beans	159
Message-Driven Beans	161
Interceptors	162
<b>The Java Persistence API</b>	<b>163</b>
JPA History	163
JPA Concepts	165
A JPA Sample	166
Applying JPA	189
<b>WebLogic Server EJB Container</b>	<b>189</b>
EJB Container Basics	190
EJB Lifecycle in WebLogic Server	190
<b>General WebLogic Server EJB Features</b>	<b>192</b>
EJB Deployment/Redeployment	192
Dynamic EJB Compilation	192
EJB Remote Business Interfaces and JNDI	193
References between EJBs	195
<b>Session Bean Features</b>	<b>201</b>
Stateless Session EJB Pooling	201
Stateful Session EJB Cache Management	202
In-Memory Replication for Stateful Session EJBs	204
Handles to Session Beans	207
Idempotent Methods	207
<b>Message-Driven Bean Features</b>	<b>208</b>
<b>OpenJPA and Kodo Features</b>	<b>209</b>
The Kodo Deployment Descriptor	209
Fetch Groups	210
Eager Fetching	212
Optimistic Locking Version Strategies	212
Large Result Sets	215
Second-level Caching	217
Controlling Flush Behavior	219
Managed Inverses	219

## Contents

---

Mixed Inheritance Strategies	220
Prepared Statement Caching	220
<b>Deployment Descriptors or Annotations?</b>	<b>221</b>
Deployment Plans	222
Annotations, Descriptors, Plans, and Dependency Injection	223
<b>Chapter Review</b>	<b>225</b>
<b>Chapter 7: Building an Example EJB Application</b>	<b>227</b>
<b>Business Layer Requirements</b>	<b>227</b>
Business Logic Requirements	228
Object-Relational Mapping Requirements	230
Data Access Requirements	234
Other Business Layer Requirements	235
Review of Business Layer Requirements	235
<b>Business Layer Architecture Options</b>	<b>235</b>
SLSBs and the Session Façade Requirements	236
Stateless Session EJBs with JDBC	237
Stateless Session EJBs with EJB 2.1 CMP Entity Beans	238
Stateless Session EJBs with JPA	242
<b>The <code>bigrez.com</code> Implementation</b>	<b>244</b>
Database Schema	245
Domain Model	247
Services	252
Unit Tests	258
Adding Optimistic Locking	259
<b>Using TopLink instead of Kodo</b>	<b>260</b>
Why Would You Want to Use TopLink?	260
Changes to <code>bigrez.com</code> to use TopLink	260
<b>Chapter Review</b>	<b>264</b>
<b>Chapter 8: Packaging and Deploying WebLogic Applications</b>	<b>265</b>
<b>Creating an EJB Archive File</b>	<b>265</b>
EJB Deployment Descriptors	266
<b>Packaging JPA Persistence Units</b>	<b>273</b>
<b>Enterprise Applications</b>	<b>274</b>
Enterprise Application Directory Structure	277
Enterprise Application Descriptor Files	278
Exploded Deployments	282
Bundled Libraries	284
Shared Java EE Libraries and Optional Packages	286
Other Types of Modules	287

---

## Contents

---

Customizing Classloading	289
<b>Packaging <code>bigrez.com</code></b>	<b>291</b>
<b>Deploying Applications</b>	<b>294</b>
Creating Required Services	295
Automatic Deployment and <code>weblogic.Deployer</code>	297
WebLogic Console Deployment	298
<b>Chapter Review</b>	<b>298</b>
<b>Chapter 9: Developing and Deploying Web Services</b>	<b>301</b>
<hr/>	
<b>Summarizing Web Services Standards</b>	<b>301</b>
<b>Creating Web Services with WebLogic Server</b>	<b>303</b>
Web Services Container Architecture	303
Developing Web Services for WebLogic Server	304
Developing Web Service Clients	318
<b>Moving Past the Basics</b>	<b>322</b>
Using JAX-RPC	322
Understanding Style and Use	323
Influencing which Operation to Invoke	325
Creating More Dynamic Web Services	327
Using Web Service Handlers	334
Using SOAP Attachments	338
Implementing Stateful Web Services	342
Implementing Asynchronous Web Services	343
Customizing Mappings between Java and XML	346
<b>Using Web Services Security</b>	<b>348</b>
Defining Security Policies	349
Transport-level Security	350
Message-level Security	352
Web Service Security Configuration	358
<b>Adding Web Services to <code>bigrez.com</code></b>	<b>359</b>
<b>Chapter Review</b>	<b>361</b>
<b>Chapter 10: Using WebLogic JMS</b>	<b>363</b>
<hr/>	
<b>JMS Key Concepts</b>	<b>363</b>
Understanding the Messaging Models	363
Reviewing the JMS API	364
<b>The WebLogic JMS Provider</b>	<b>370</b>
Understanding WebLogic JMS Servers	370
Clustering WebLogic JMS	371
WebLogic JMS Clients	380
Configuring WebLogic JMS	383

## Contents

---

<b>WebLogic JMS Application Design</b>	<b>398</b>
Choosing a Destination Type	398
Locating Destinations	399
Choosing the Appropriate Message Type	400
Compressing Large Messages	402
Selecting a Message Acknowledgment Strategy	403
Designing Message Selectors	404
Choosing a Message Expiration Strategy	407
Handling Poison Messages	409
Handling Message Ordering Issues	412
Using Transactions	417
Using Multicast Sessions	419
Handling Request/Reply Style Message Exchange	420
<b>WebLogic JMS Application Programming</b>	<b>424</b>
Using WebLogic JMS with Servlets and EJBs	424
Consuming Asynchronous Messages on the Server	427
<b>External JMS Providers</b>	<b>432</b>
Understanding the Messaging Bridge	433
Understanding the Store-and-Forward Service	434
Using Message-Driven Beans	436
Mapping External JMS Objects to WebLogic JNDI	437
Integrating Oracle Advanced Queuing	438
Choosing an Integration Strategy	440
<b>Chapter Review</b>	<b>441</b>
<b>Chapter 11: Using WebLogic Security</b>	<b>443</b>
<b>WebLogic Security Overview</b>	<b>443</b>
Administration	447
<b>WebLogic Security Framework</b>	<b>449</b>
Embedded LDAP Server	450
Security Realms and Providers	453
<b>Using External Security Stores</b>	<b>465</b>
Managing External LDAP Authentication	465
Managing RDBMS Authentication	467
<b>Setting Up SSL/TLS</b>	<b>469</b>
Overview of SSL and X.509 Certificates	469
Obtaining X.509 Certificates	470
Configuring One-Way SSL	472
Configuring Two-Way SSL	474
Debugging SSL Problems	477
<b>Writing Security-Aware Java Clients</b>	<b>478</b>

## Contents

---

Writing Java Clients That Use JAAS	479
Writing Java Clients That Use SSL	482
<b>Managing Application Security</b>	<b>487</b>
Application Security Models	487
Setting Up Java EE Application Security	488
Setting Up WebLogic Server Application Security	496
Booting WebLogic Server	500
<b>Single Sign-On</b>	<b>501</b>
Security Assertion Markup Language (SAML)	501
Setting Up Cross Domain Security and Single Sign-On	510
Custom Authentication Providers	516
<b>Chapter Review</b>	<b>517</b>
<b>Chapter 12: Administering and Deploying Applications in WebLogic Server</b>	<b>519</b>
<b>WebLogic Architecture Key Concepts</b>	<b>519</b>
Domain Architecture	519
WebLogic Server Architecture	521
WebLogic Server Clustering Architecture	530
Admin Server	538
Node Manager	541
<b>WebLogic Administration Key Concepts</b>	<b>542</b>
Server States	542
Server Self-Health Monitoring	544
Network Channels	545
<b>Configuring a WebLogic Server Domain</b>	<b>547</b>
Setting Up a New Domain	549
Configuring Servers	551
Configuring the Cluster	553
Configuring Network Channels	557
Setting Up the Node Manager	560
Operating System Configuration	566
Java Virtual Machine Configuration	567
Web Server Plug-in Configuration	567
Administration Port and Channel Configuration	572
Configuring Applications for WebLogic Server	575
<b>Monitoring WebLogic Server Applications</b>	<b>595</b>
Using the WebLogic Scripting Tool	595
Using the Deprecated Command-Line Administration Tool	600
Monitoring with the WebLogic Console	601
Programmatic Monitoring with JMX	603
Monitoring via SNMP	607

---

<b>Managing WebLogic Server Applications</b>	<b>615</b>
Troubleshooting Application Issues	615
Versioning Applications	628
Managing Failure Conditions	630
<b>Chapter Review</b>	<b>641</b>
<b>Chapter 13: Optimizing WebLogic Server Performance</b>	<b>643</b>
<b>Overview of System Performance</b>	<b>644</b>
Reviewing the Core Principles	644
Tuning a WebLogic Server-Based Application	645
<b>Performance Best Practices</b>	<b>665</b>
Designing for Performance	665
Understanding Web Container Best Practices	667
Understanding EJB Container Best Practices	670
Applying Database Access Best Practices	672
<b>Troubleshooting Performance Problems</b>	<b>677</b>
Preparing for Troubleshooting	678
Bottleneck Identification and Correction	678
Problem Resolution	680
Common Application Server Performance Problems	682
Java Stack Traces	684
<b>Chapter Review</b>	<b>689</b>
<b>Chapter 14: Development Environment Best Practices</b>	<b>691</b>
<b>Defining Required Hardware and Software</b>	<b>692</b>
Sharing a Database Server	693
<b>Installing WebLogic Server Software</b>	<b>695</b>
Creating and Configuring a WebLogic Server Domain	696
<b>Development Project Structure</b>	<b>697</b>
<b>Streamlining the Development Cycle</b>	<b>698</b>
Split Directory Development	698
FastSwap	700
<b>Establishing a Build Process</b>	<b>701</b>
Continuous Integration	702
Code Inspection and Reporting Tools	704
<b>Integrated Development Environments</b>	<b>704</b>
Prerequisites	705
Configuring Eclipse for <code>bigrez.com</code>	705
Configuring JDeveloper for <code>bigrez.com</code>	711
Debugging with an IDE	714
<b>Creating a Unit Testing Infrastructure</b>	<b>715</b>
