Preface	<i>page</i> ix
1 Ceramic Membranes and Membrane Processes	1
1.1 Introduction	1
1.2 Membrane Processes	5
1.2.1 Gas separation	6
1.2.2 Pervaporation	7
1.2.3 Reverse osmosis and nanofiltration	9
1.2.4 Ultrafiltration and microfiltration	10
1.2.5 Dialysis	11
1.2.6 Electrodialysis	12
1.2.7 Membrane contactors	14
1.2.8 Membrane reactors	16
References	18
2 Preparation of Ceramic Membranes	21
2.1 Introduction	21
2.2 Slip Casting	22
2.3 Tape Casting	23
2.4 Pressing	24
2.5 Extrusion	24
2.6 Sol-Gel Process	25
2.7 Dip Coating	27
2.8 Chemical Vapour Deposition (CVD)	27
2.9 Preparation of Hollow Fibre Ceramic Membranes	29
2.9.1 Preparation of spinning suspensions	29
2.9.2 Spinning of ceramic hollow fibre precursors	35
2.9.3 Sintering	39
2.9.4 Example 1: Preparation of porous Al ₂ O ₃ hollow fibre membranes	43
2.9.5 Example 2: Preparation of TiO ₂ /Al ₂ O ₃ composite hollow fibre membranes	48
2.9.6 Example 3: Preparation of dense perovskite hollow fibre membranes	49
Appendix 2.1: Surface Forces	53
A2.1.1 Electrostatic forces	53
A2.1.2 DVLO theory and van der Waals forces	54

A2.1.3 Steric hindrance	54
References	55
3 Characterization of Ceramic Membranes	59
3.1 Introduction	59
3.2 Morphology of Membrane Surfaces and Cross Sections	60
3.3 Porous Ceramic Membranes	63
3.3.1 Gas adsorption/desorption isotherms	63
3.3.2 Permporometry	66
3.3.3 Mercury porosimetry	67
3.3.4 Thermoporometry	69
3.3.5 Liquid displacement techniques	71
3.3.6 Permeation method	74
3.3.7 Measurements of solute rejection	81
3.4 Dense Ceramic Membranes	83
3.4.1 Leakage test	84
3.4.2 Permeation measurements	86
3.4.3 XRD	90
3.4.4 Mechanical strength	90
Notation	91
Greek letters	92
Subscripts	93
References	93
4 Transport and Separation of Gases in Porous Ceramic Membranes	97
4.1 Introduction	97
4.2 Performance Indicators of Gas Separation Membranes	98
4.3 Ceramic Membranes for Gas Separation	99
4.3.1 Zeolite membranes	100
4.3.2 Silica membranes	101
4.3.3 Carbon membranes	103
4.4 Transport Mechanisms	103
4.4.1 Knudsen and slip flow	104
4.4.2 Viscous flow	105
4.4.3 Surface flow	106
4.4.4 Capillary condensation	107
4.4.5 Configurational or micropore diffusion	109
4.4.6 Simultaneous occurrence of different mechanisms	111
4.5 Modification of Porous Ceramic Membranes for Gas Separation	114
4.6 Resistance Model for Gas Transport in Composite Membranes	117
4.6.1 Effect of support layers	118
4.6.2 Effect of nonzeolitic pores	119
4.6.3 Effect of coating	120
4.7 System Design	122
4.7.1 Operating Schemes	122
4.7.2 Design equations for membrane processes in gas separation	124

Notation	129
Greek letters	130
Superscripts	130
Subscripts	130
References	131
5 Ceramic Hollow Fibre Membrane Contactors for Treatment of Gases/Vapours	135
5.1 Introduction	135
5.2 General Review	136
5.3 Operating Modes and Mass Transfer Coefficients	139
5.3.1 Nonwetted mode	139
5.3.2 Wetted mode	141
5.3.3 Mass transfer coefficients determined from experiments	142
5.4 Mass Transfer in Hollow Fibre Contactors	144
5.4.1 Mass transfer in hollow fibre lumens	144
5.4.2 Mass transfer across membranes	146
5.4.3 Mass transfer in shell side of a contactor	151
5.4.4 Nonwetted, wetted and partially wetted conditions in a hollow fibre contactor	153
5.5 Effect of Chemical Reaction	156
5.5.1 Instantaneous reaction	156
5.5.2 Fast reaction	158
5.6 Design Equations	159
Notation	162
Symbols	163
Subscripts	163
Superscripts	164
Appendix 5.1	164
References	165
6 Mixed Conducting Ceramic Membranes for Oxygen Separation	169
6.1 Introduction	169
6.2 Fundamentals of Mixed Conducting Ceramic Materials	170
6.2.1 Structure of perovskite-type materials	170
6.2.2 Doping strategies	172
6.2.3 Properties of materials	172
6.3 Current Status of Oxygen Permeable Membranes	173
6.3.1 Perovskite-type oxides	174
6.3.2 Non-perovskite-type oxides	179
6.3.3 Summary of ceramic oxygen permeable materials	181
6.4 Dual Phase Membranes	182
6.5 Oxygen Transport	183
6.5.1 Transport mechanism	183
6.5.2 Transport equations	185
6.5.3 Transport analysis	187

6.6	Air Separation	190
6.6.1	Design equations	193
6.6.2	Performance analysis	195
6.7	Further Development – Challenges and Prospects	206
	Notation	207
	Greek letters	208
	Superscripts	208
	Subscripts	208
	References	209
7	Mixed Conducting Ceramic Membranes for Hydrogen Permeation	217
7.1	Introduction	217
7.2	Proton and Electron (Hole) Conducting Materials and Membranes	218
7.2.1	Perovskite-type oxides	219
7.2.2	Non-perovskite-type oxides	224
7.3	Dual Phase Membranes	225
7.4	Proton Transport	226
7.4.1	Transport mechanism	226
7.4.2	Transport equations for mixed proton–hole conducting membranes	228
7.4.3	Transport analysis	230
7.5	Applications of Proton Conducting Ceramic Membranes	236
7.5.1	Hydrogen production	236
7.5.2	Dehydrogenation reactions	237
	Notation	239
	Subscripts	239
	References	239
8	Ceramic Membrane Reactors	245
8.1	Introduction	245
8.2	Membranes as Product Separators	246
8.2.1	Microporous membrane reactors	246
8.2.2	Dense ceramic membrane reactors	249
8.3	Membranes as Reactant Distributors	256
8.3.1	Porous membrane reactors	257
8.3.2	Dense ceramic membranes	273
	Notation	288
	Greek letters	289
	Subscripts	290
	References	290
	Index	299
