Foreword	xvii
Preface	xix
Thoughts for Instructors	xxiii
Contributors	xxvii
Acknowledgments	xxxiii
Acronyms	xxxv
1 Introduction	1
<i>Gregory S. Parnell and Patrick J. Driscoll</i>	
1.1 Purpose	1
1.2 System	3
1.3 Stakeholders	3
1.4 System Life Cycle	5
1.5 Systems Thinking	7
1.6 Systems Engineering Thought Process	8
1.7 Systems Engineering	10
1.8 Engineering Management	11
1.9 Systems Decision Process	12
1.10 Overview	13
1.11 Exercises	14
References	15

PART I SYSTEMS THINKING

2 Systems Thinking	19
<i>Patrick J. Driscoll</i>	
2.1 Introduction	19
2.2 Structure	23
2.3 Classification	24
2.4 Boundaries	26
2.5 Visibility	29
2.6 IDEF ϕ Models	31
2.7 Mathematical Structure	38
2.8 Spatial Arrangement	44
2.9 Evolution	47
2.10 Summary	48
2.11 Exercises	49
References	52
3 System Life Cycle	55
<i>Patrick J. Driscoll</i>	
3.1 Introduction	55
3.2 System Life Cycle Model	58
3.2.1 Establish System Need	58
3.2.2 Develop System Concept	60
3.2.3 Design and Develop System	60
3.2.4 Produce System	61
3.2.5 Deploy System	61
3.2.6 Operate System	62
3.2.7 Retire System	63
3.3 Other Major System Life Cycle Models	63
3.4 Risk Analysis in the System Life Cycle	67
3.4.1 Risk Assessment in the System Life Cycle	69
3.4.2 Prioritizing Risks for Risk Management	71
3.5 Summary	75
3.6 Exercises	76
References	77
4 Systems Modeling and Analysis	79
<i>Paul D. West, John E. Kobza, and Simon R. Goerger</i>	
4.1 Introduction	79
4.2 Developing System Measures	80
4.3 Modeling the System Design	82
4.3.1 What Models Are	83
4.3.2 Why We Use Models	83

4.3.3	Role of Models in Solution Design	85
4.3.4	Qualities of Useful Models	85
4.4	The Modeling Process – How We Build Models	88
4.4.1	Create a Conceptual Model	88
4.4.2	Construct the Model	90
4.4.3	Exercise the Model	90
4.4.4	Revise the Model	92
4.5	The Model Toolbox: Types of Models, Their Characteristics, and Uses	92
4.5.1	Characteristics of Models	95
4.5.2	The Model Toolbox	98
4.6	Simulation Modeling	105
4.6.1	Analytical Solutions versus Simulation; When it is Appropriate to Use Simulation	105
4.6.2	Simulation Tools	106
4.7	Determining Required Sample Size	111
4.8	Summary	114
4.9	Exercises	114
	References	116
5	Life Cycle Costing	119
	<i>Edward Pohl and Heather Nachtmann</i>	
5.1	Introduction to Life Cycle Costing	119
5.2	Introduction to Cost Estimating Techniques	121
5.2.1	Types of Costs	125
5.3	Cost Estimation Techniques	126
5.3.1	Estimating by Analogy Using Expert Judgment	127
5.3.2	Parametric Estimation Using Cost Estimating Relationships	128
5.3.3	Learning Curves	141
5.4	System Cost for Systems Decision Making	147
5.4.1	Time Value of Money	147
5.4.2	Inflation	148
5.4.3	Net Present Value	151
5.4.4	Breakeven Analysis and Replacement Analysis	152
5.5	Risk and Uncertainty in Cost Estimation	152
5.5.1	Monte Carlo Simulation Analysis	153
5.5.2	Sensitivity Analysis	157
5.6	Summary	158
5.7	Exercises	159
	References	161

PART II SYSTEMS ENGINEERING

6	Introduction to Systems Engineering	165
	<i>Gregory S. Parnell</i>	
6.1	Introduction	165
6.2	Definition of System	165
6.3	Brief History of Systems Engineering	166
6.4	Systems Trends that Challenge System Engineers	166
6.5	Three Fundamental Tasks of Systems Engineers	167
6.6	Relationship of Systems Engineers to Other Engineering Disciplines	170
6.7	Education and Training of Systems Engineers	170
6.8	Exercises	171
	References	172
7	Systems Engineering In Professional Practice	173
	<i>Roger C. Burk</i>	
7.1	The Systems Engineer in the Engineering Organization	173
7.1.1	The Systems Engineering Job	173
7.1.2	Three Systems Engineering Perspectives	174
7.1.3	Organizational Placement of Systems Engineers	175
7.2	Systems Engineering Activities	175
7.2.1	Establish System Need	176
7.2.2	Develop System Concept	177
7.2.3	Design and Develop the System	177
7.2.4	Produce System	178
7.2.5	Deploy System	178
7.2.6	Operate System	178
7.2.7	Retire System	178
7.3	The Systems Engineer and Others	178
7.3.1	The SE and the Program Manager	178
7.3.2	The SE and the Customer, the User, and the Consumer	180
7.3.3	The SE and the CTO or CIO	180
7.3.4	The SE and the Operations Researcher or System Analyst	181
7.3.5	The SE and the Configuration Manager	181
7.3.6	The SE and the Life-Cycle Cost Estimator	181
7.3.7	The SE and the Engineering Manager	181
7.3.8	The SE and the Discipline Engineer	182
7.3.9	The SE and the Test Engineer	182
7.3.10	The SE and the Specialty Engineer	182
7.3.11	The SE and the Industrial Engineer	183
7.3.12	The SE and Quality Assurance	183

7.4	Building an Interdisciplinary Team	183
7.4.1	Team Fundamentals	183
7.4.2	Team Attitude	184
7.4.3	Team Selection	185
7.4.4	Team Life Cycle	185
7.5	Systems Engineering Responsibilities	186
7.5.1	Systems Engineering Management Plan (SEMP)	186
7.5.2	Technical Interface with Users and Consumers	187
7.5.3	System Requirements Analysis and Management	187
7.5.4	System Architecting	188
7.5.5	Interface Control Documents (ICDs)	189
7.5.6	Test and Evaluation Master Plan (TEMP)	189
7.5.7	Configuration Management (CM)	190
7.5.8	Specialty Engineering	190
7.5.9	Major Program Technical Reviews	191
7.5.10	System Integration and Test	192
7.6	Roles of the System Engineer	192
7.7	Characteristics of the Ideal Systems Engineer	193
7.8	Summary	194
7.9	Exercises	195
	References	196
8	System Effectiveness	197
	<i>Edward Pohl</i>	
8.1	Introduction to System Effectiveness	197
8.2	Reliability Modeling	198
8.3	Mathematical Models in Reliability	199
8.3.1	Common Continuous Reliability Distributions	203
8.3.2	Common Discrete Distributions	210
8.4	Basic System Models	214
8.4.1	Series System	214
8.4.2	Parallel System	215
8.4.3	K -out-of- N Systems	215
8.4.4	Complex Systems	216
8.5	Component Reliability Importance Measures	218
8.5.1	Importance Measure for Series System	218
8.5.2	Importance Measure for Parallel System	219
8.6	Reliability Allocation and Improvement	219
8.7	Markov Models of Repairable Systems	222
8.7.1	Kolmogorov Differential Equations	222
8.7.2	Transient Analysis	223
8.7.3	Steady State Analysis	225

8.7.4	CTMC Models of Repairable Systems	225
8.7.5	Modeling Multiple Machine Problems	227
8.7.6	Conclusions	232
8.8	Exercises	232
	References	240

PART III SYSTEMS DECISION MAKING

9 Systems Decision Process Overview 243

Gregory S. Parnell and Paul D. West

9.1	Introduction	243
9.2	Value-Focused Versus Alternative-Focused Thinking	244
9.3	Decision Quality	246
9.4	Systems Decision Process	247
9.5	Role of Stakeholders	249
9.6	Role of Decision Makers	250
9.7	Environment	251
9.8	Comparison with Other Processes	253
9.9	When to Use the Systems Decision Process	253
9.9.1	Need	254
9.9.2	Resources	254
9.9.3	Decision Maker and Stakeholder Support	254
9.10	Tailoring the Systems Decision Process to the Systems Engineering Project	254
9.11	Example of Use of the Systems Decision Process	257
9.12	Illustrative Example: Systems Engineering Curriculum Management System (CMS)—Summary and Introduction	258
9.13	Exercises	260
	References	261

10 Problem Definition 263

Timothy Trainor and Gregory S. Parnell

10.1	Introduction	263
10.1.1	Introduction to the Problem Definition Phase	264
10.1.2	Comparison with Other Systems Engineering Processes	266
10.1.3	Purpose of the Problem Definition Phase	266
10.1.4	Chapter Example	266
10.2	Stakeholder Analysis	267
10.2.1	Introduction	267
10.2.2	Techniques for Stakeholder Analysis	268
10.2.3	Stakeholder Analysis for the Rocket System Decision Problem	278
10.2.4	Conclusion	279
10.3	Functional Analysis	279

10.3.1	Terminology	279
10.3.2	Importance of Functional Analysis	280
10.3.3	Functional Analysis Techniques	280
10.3.4	Conclusion	288
10.4	Value Modeling	289
10.4.1	Introduction	289
10.4.2	Definitions Used in Value Modeling	289
10.4.3	Qualitative Value Modeling	290
10.4.4	Quantitative Value Model	294
10.4.5	Conclusion	301
10.5	Output of the Problem Definition Phase: Problem Statement, Screening Criteria, and Value Model	303
10.5.1	Introduction	303
10.5.2	Discussion	303
10.5.3	Conclusion	304
10.6	Illustrative Example: Systems Engineering Curriculum Management System (CMS)—Problem Definition	304
10.7	Exercises	313
	References	313
11	Solution Design	317
	<i>Paul D. West</i>	
11.1	Introduction to Solution Design	317
11.2	Survey of Idea Generation Techniques	319
11.2.1	Brainstorming	319
11.2.2	Brainwriting	322
11.2.3	Affinity Diagramming	322
11.2.4	Delphi	322
11.2.5	Groupware	324
11.2.6	Lateral and Parallel Thinking and Six Thinking Hats	325
11.2.7	Morphology	325
11.2.8	Ends-Means Chains	327
11.2.9	Existing or New Options	327
11.2.10	Other Ideation Techniques	327
11.3	Turning Ideas into Alternatives	328
11.3.1	Alternative Generation Approaches	329
11.3.2	Feasibility Screening	330
11.4	Enhancing Solution Candidates	332
11.4.1	Modeling Alternatives	332
11.4.2	Simulating Alternatives	332
11.4.3	Design of Experiments	333
11.4.4	Fractional Factorial Design	339
11.4.5	Pareto Analysis	349

11.5	Summary	350
11.6	Illustrative Example: Systems Engineering Curriculum Management System (CMS)—Solution Design	351
11.7	Exercises	353
	References	354
12	Decision Making	357
	<i>Michael J. Kwinn, Jr. and Gregory S. Parnell</i>	
12.1	Introduction	357
12.2	Preparing to Score Candidate Solutions	358
	12.2.1 Revised Problem Statement	358
	12.2.2 Value Model	359
	12.2.3 Candidate Solutions	359
	12.2.4 Modeling and Simulation Results	359
	12.2.5 Confirm Value Measure Ranges and Weights	359
12.3	Four Scoring Methods	360
	12.3.1 Operations	360
	12.3.2 Testing	360
	12.3.3 Modeling	360
	12.3.4 Simulation	361
	12.3.5 Expert Opinion	361
	12.3.6 Revisit Value Measures and Weights	362
12.4	Score Candidate Solutions or Candidate Components	362
	12.4.1 Software for Decision Analysis	363
	12.4.2 Candidate Solution Scoring and Value Calculation	364
	12.4.3 Candidate Components Scoring and System Optimization	366
12.5	Conduct Sensitivity Analysis	371
	12.5.1 Analyzing Sensitivity on Weights	372
	12.5.2 Sensitivity Analysis on Weights Using Excel	373
	12.5.3 Conduct Monte Carlo Simulation on Measure Scores	377
12.6	Use Value-Focused Thinking to Improve Solutions	380
12.7	Conduct Cost Analysis	383
12.8	Conduct Cost/Benefit Analysis	384
12.9	Prepare Recommendation Report and Presentation	385
	12.9.1 Develop Report	385
	12.9.2 Develop Presentation	386
12.10	Prepare for Solution Implementation	391
12.11	Illustrative Example: Systems Engineering Curriculum Management System (CMS)—Decision Making	391
12.12	Exercises	394
	References	397

13 Solution Implementation	399
<i>Robert Powell</i>	
13.1 Introduction	399
13.2 The Solution Implementation Phase	400
13.3 Planning for Action: The Work Breakdown Structure	403
13.4 System Performance Measurement	405
13.4.1 Monitoring	406
13.4.2 Assessing	406
13.4.3 Controlling	406
13.5 Solution Implementation Strategy	407
13.6 Implementation for the “Produce the System” Life Cycle Stage	408
13.6.1 Planning for Action	409
13.6.2 Developing the Organization	409
13.6.3 Execution	412
13.6.4 Assessment and Control	413
13.7 Implementation for the “Deploy the System” Life Cycle Stage	414
13.7.1 Planning for Action	415
13.7.2 Execution	416
13.7.3 Assessment and Control	416
13.8 Implementation in the “Operate the System” Life Cycle Stage	417
13.8.1 Planning for Action	417
13.8.2 Execution	418
13.8.3 Assessment and Control	418
13.9 Summary	419
13.10 Illustrative Example: Systems Engineering Curriculum Management System (CMS)—Implementation	422
13.11 Exercises	426
References	427
14 Summary	429
<i>Gregory S. Parnell</i>	
14.1 Systems Thinking is the Key to Systems Engineering and Systems Decision Making	430
14.1.1 Systems Thinking Focuses on System Behavior in the Current and Future Operating Environment	430
14.1.2 System Managers Must Consider the System Life Cycle	430
14.1.3 Modeling and Simulation are Important Tools for Systems Engineers	430
14.1.4 The System Life Cycle is a Key Risk Management Tool	430
14.1.5 Life Cycle Costing is an Important Tool for Systems Engineering	431
14.2 Systems Engineers Play a Critical Role in the System Life Cycle	431

14.2.1	Systems Engineers Lead Interdisciplinary Teams to Obtain System Solutions That Create Value for Decision Makers and Stakeholders	431
14.2.2	Systems Engineers Convert Stakeholder Needs to System Functions and Requirements	431
14.2.3	Systems Engineers Define Value and Manage System Effectiveness	432
14.2.4	Systems Engineers Have Key Roles Throughout the System Life Cycle	432
14.3	A Systems Decision Process is Required for Complex Systems Decisions	432
14.3.1	Problem Definition is the Key to Systems Decisions	433
14.3.2	If We Want Better Decisions, We Need Better System Solution Designs	433
14.3.3	We Need to Identify the Best Value for the Resources	433
14.3.4	Solution Implementation Requires Planning and Execution	433
14.4	Systems Engineering will Become More Challenging	434
	Index	435
