

Contents at a Glance

<i>Introduction</i>	1
<i>Part I: Lining Up the Basics of Linear Algebra</i>	7
Chapter 1: Putting a Name to Linear Algebra.....	9
Chapter 2: The Value of Involving Vectors.....	19
Chapter 3: Mastering Matrices and Matrix Algebra	41
Chapter 4: Getting Systematic with Systems of Equations.....	65
<i>Part II: Relating Vectors and Linear Transformations</i>	85
Chapter 5: Lining Up Linear Combinations	87
Chapter 6: Investigating the Matrix Equation $Ax = b$	105
Chapter 7: Homing In on Homogeneous Systems and Linear Independence	123
Chapter 8: Making Changes with Linear Transformations	147
<i>Part III: Evaluating Determinants</i>	173
Chapter 9: Keeping Things in Order with Permutations	175
Chapter 10: Evaluating Determinants.....	185
Chapter 11: Personalizing the Properties of Determinants.....	201
Chapter 12: Taking Advantage of Cramer’s Rule	223
<i>Part IV: Involving Vector Spaces</i>	239
Chapter 13: Involving Vector Spaces.....	241
Chapter 14: Seeking Out Subspaces of Vector Spaces	255
Chapter 15: Scoring Big with Vector Space Bases	273
Chapter 16: Eyeing Eigenvalues and Eigenvectors.....	289
<i>Part V: The Part of Tens</i>	309
Chapter 17: Ten Real-World Applications Using Matrices	311
Chapter 18: Ten (Or So) Linear Algebra Processes You Can Do on Your Calculator	327
Chapter 19: Ten Mathematical Meanings of Greek Letters	339
<i>Glossary</i>	343
<i>Index</i>	351

<i>Introduction</i>	1
About This Book	1
Conventions Used in This Book	2
What You're Not to Read	2
Foolish Assumptions	2
How This Book Is Organized	3
Part I: Lining Up the Basics of Linear Algebra	3
Part II: Relating Vectors and Linear Transformations	3
Part III: Evaluating Determinants	3
Part IV: Involving Vector Spaces	4
Part V: The Part of Tens	4
Icons Used in This Book	4
Where to Go from Here	5
<i>Part I: Lining Up the Basics of Linear Algebra</i>	7
Chapter 1: Putting a Name to Linear Algebra	9
Solving Systems of Equations in Every Which Way but Loose	10
Matchmaking by Arranging Data in Matrices	12
Valuating Vector Spaces	14
Determining Values with Determinants	15
Zeroing In on Eigenvalues and Eigenvectors	16
Chapter 2: The Value of Involving Vectors	19
Describing Vectors in the Plane	19
Homing in on vectors in the coordinate plane	20
Adding a dimension with vectors out in space	23
Defining the Algebraic and Geometric Properties of Vectors	24
Swooping in on scalar multiplication	24
Adding and subtracting vectors	27
Managing a Vector's Magnitude	29
Adjusting magnitude for scalar multiplication	30
Making it all right with the triangle inequality	32
Getting an inside scoop with the inner product	35
Making it right with angles	37

Chapter 3: Mastering Matrices and Matrix Algebra 41

Getting Down and Dirty with Matrix Basics	41
Becoming familiar with matrix notation	42
Defining dimension	43
Putting Matrix Operations on the Schedule.....	43
Adding and subtracting matrices	43
Scaling the heights with scalar multiplication	45
Making matrix multiplication work	45
Putting Labels to the Types of Matrices.....	48
Identifying with identity matrices.....	49
Triangulating with triangular and diagonal matrices.....	51
Doubling it up with singular and non-singular matrices.....	51
Connecting It All with Matrix Algebra.....	52
Delineating the properties under addition.....	52
Tackling the properties under multiplication.....	53
Distributing the wealth using matrix multiplication and addition	55
Transposing a matrix	55
Zeroing in on zero matrices.....	56
Establishing the properties of an invertible matrix	57
Investigating the Inverse of a Matrix.....	58
Quickly quelling the 2×2 inverse.....	59
Finding inverses using row reduction.....	60

Chapter 4: Getting Systematic with Systems of Equations. 65

Investigating Solutions for Systems	65
Recognizing the characteristics of having just one solution	66
Writing expressions for infinite solutions	67
Graphing systems of two or three equations.....	67
Dealing with Inconsistent Systems and No Solution.....	71
Solving Systems Algebraically	72
Starting with a system of two equations.....	73
Extending the procedure to more than two equations.....	74
Revisiting Systems of Equations Using Matrices.....	76
Instituting inverses to solve systems	77
Introducing augmented matrices.....	78
Writing parametric solutions from augmented matrices	82

Part II: Relating Vectors and Linear Transformations 85**Chapter 5: Lining Up Linear Combinations 87**

Defining Linear Combinations of Vectors.....	87
Writing vectors as sums of other vectors	87
Determining whether a vector belongs.....	89
Searching for patterns in linear combinations	93

Visualizing linear combinations of vectors	95
Getting Your Attention with Span	95
Describing the span of a set of vectors.....	96
Showing which vectors belong in a span.....	98
Spanning \mathbb{R}^2 and \mathbb{R}^3	101
Chapter 6: Investigating the Matrix Equation $Ax = b$	105
Working Through Matrix-Vector Products	106
Establishing a link with matrix products.....	106
Tying together systems of equations and the matrix equation...	108
Confirming the Existence of a Solution or Solutions.....	110
Singling out a single solution.....	110
Making way for more than one solution	112
Getting nowhere because there's no solution	120
Chapter 7: Homing In on Homogeneous Systems and Linear Independence	123
Seeking Solutions of Homogeneous Systems.....	123
Determining the difference between trivial and nontrivial solutions	124
Formulating the form for a solution	126
Delving Into Linear Independence.....	128
Testing for dependence or independence.....	129
Characterizing linearly independent vector sets	132
Connecting Everything to Basis.....	135
Getting to first base with the basis of a vector space.....	136
Charting out the course for determining a basis.....	138
Extending basis to matrices and polynomials	141
Finding the dimension based on basis.....	144
Chapter 8: Making Changes with Linear Transformations	147
Formulating Linear Transformations	147
Delineating linear transformation lingo	148
Recognizing when a transformation is a linear transformation...	151
Proposing Properties of Linear Transformations	154
Summarizing the summing properties.....	154
Introducing transformation composition and some properties..	156
Performing identity checks with identity transformations	159
Delving into the distributive property	161
Writing the Matrix of a Linear Transformation.....	161
Manufacturing a matrix to replace a rule	162
Visualizing transformations involving rotations and reflections	163
Translating, dilating, and contracting.....	167
Determining the Kernel and Range of a Linear Transformation.....	169
Keeping up with the kernel.....	169
Ranging out to find the range.....	170

Part III: Evaluating Determinants 173**Chapter 9: Keeping Things in Order with Permutations 175**

Computing and Investigating Permutations.....	176
Counting on finding out how to count	176
Making a list and checking it twice.....	177
Bringing permutations into matrices (or matrices into permutations)	180
Involving Inversions in the Counting	181
Investigating inversions	181
Inviting even and odd inversions to the party.....	183

Chapter 10: Determining Values of Determinants 185

Evaluating the Determinants of 2×2 Matrices	185
Involving permutations in determining the determinant	186
Coping with cofactor expansion	189
Using Determinants with Area and Volume	192
Finding the areas of triangles	192
Pursuing parallelogram areas	195
Paying the piper with volumes of parallelepipeds	198

Chapter 11: Personalizing the Properties of Determinants 201

Transposing and Inverting Determinants.....	202
Determining the determinant of a transpose	202
Investigating the determinant of the inverse	203
Interchanging Rows or Columns.....	204
Zeroing In on Zero Determinants	206
Finding a row or column of zeros	206
Zeroing out equal rows or columns	206
Manipulating Matrices by Multiplying and Combining.....	209
Multiplying a row or column by a scalar	209
Adding the multiple of a row or column to another row or column	212
Taking on Upper or Lower Triangular Matrices	213
Tracking down determinants of triangular matrices	213
Cooking up a triangular matrix from scratch.....	214
Creating an upper triangular or lower triangular matrix.....	217
Determinants of Matrix Products	221

Chapter 12: Taking Advantage of Cramer's Rule 223

Inviting Inverses to the Party with Determined Determinants.....	223
Setting the scene for finding inverses	224
Introducing the adjoint of a matrix.....	225
Instigating steps for the inverse	228
Taking calculated steps with variable elements.....	229

Solving Systems Using Cramer’s Rule..... 231
 Assigning the positions for Cramer’s rule 231
 Applying Cramer’s rule 232
 Recognizing and Dealing with a Nonanswer 234
 Taking clues from algebraic and augmented matrix solutions.... 234
 Cramming with Cramer for non-solutions 235
 Making a Case for Calculators and Computer Programs..... 236
 Calculating with a calculator 236
 Computing with a computer..... 238

Part IV: Involving Vector Spaces..... 239

Chapter 13: Promoting the Properties of Vector Spaces 241

Delving into the Vector Space..... 241
 Describing the Two Operations..... 243
 Letting vector spaces grow with vector addition..... 243
 Making vector multiplication meaningful 244
 Looking for closure with vector operations 245
 Ferreting out the failures to close 246
 Singling Out the Specifics of Vector Space Properties 247
 Changing the order with commutativity of vector addition 248
 Regrouping with addition and scalar multiplication..... 250
 Distributing the wealth of scalars over vectors..... 251
 Zeroing in on the idea of a zero vector 253
 Adding in the inverse of addition 253
 Delighting in some final details 254

Chapter 14: Seeking Out Subspaces of a Vector Space 255

Investigating Properties Associated with Subspaces 256
 Determining whether you have a subset 256
 Getting spaced out with a subset being a vector space 259
 Finding a Spanning Set for a Vector Space 261
 Checking out a candidate for spanning..... 261
 Putting polynomials into the spanning mix..... 262
 Skewing the results with a skew-symmetric matrix 263
 Defining and Using the Column Space 265
 Connecting Null Space and Column Space..... 270

Chapter 15: Scoring Big with Vector Space Bases 273

Going Geometric with Vector Spaces 274
 Lining up with lines 274
 Providing plain talk for planes 275
 Creating Bases from Spanning Sets..... 276

Making the Right Moves with Orthogonal Bases.....	279
Creating an orthogonal basis	281
Using the orthogonal basis to write the linear combination	282
Making orthogonal orthonormal.....	283
Writing the Same Vector after Changing Bases	285

Chapter 16: Eyeing Eigenvalues and Eigenvectors 289

Defining Eigenvalues and Eigenvectors	289
Demonstrating eigenvectors of a matrix.....	290
Coming to grips with the eigenvector definition	291
Illustrating eigenvectors with reflections and rotations	291
Solving for Eigenvalues and Eigenvectors.....	294
Determining the eigenvalues of a 2×2 matrix.....	294
Getting in deep with a 3×3 matrix.....	297
Circling Around Special Circumstances	299
Transforming eigenvalues of a matrix transpose	300
Reciprocating with the eigenvalue reciprocal	301
Triangulating with triangular matrices	302
Powering up powers of matrices	303
Getting It Straight with Diagonalization.....	304

***Part V: The Part of Tens*..... 309**

Chapter 17: Ten Real-World Applications Using Matrices 311

Eating Right	311
Controlling Traffic	312
Catching Up with Predator-Prey.....	314
Creating a Secret Message.....	315
Saving the Spotted Owl.....	317
Migrating Populations.....	318
Plotting Genetic Code	318
Distributing the Heat.....	320
Making Economical Plans	321
Playing Games with Matrices.....	322

Chapter 18: Ten (Or So) Linear Algebra Processes You Can Do on Your Calculator 327

Letting the Graph of Lines Solve a System of Equations	328
Making the Most of Matrices.....	329
Adding and subtracting matrices	330
Multiplying by a scalar	330
Multiplying two matrices together	330

Performing Row Operations..... 331
 Switching rows 331
 Adding two rows together 331
 Adding the multiple of one row to another 332
 Multiplying a row by a scalar 332
 Creating an echelon form..... 333
 Raising to Powers and Finding Inverses 334
 Raising matrices to powers 334
 Inverting inverses..... 334
 Determining the Results of a Markov Chain..... 334
 Solving Systems Using $A^{-1} * B$ 336
 Adjusting for a Particular Place Value 337

Chapter 19: Ten Mathematical Meanings of Greek Letters 339

Insisting That π Are Round..... 339
 Determining the Difference with Δ 340
 Summing It Up with Σ 340
 Row, Row, Row Your Boat with ρ 340
 Taking on Angles with θ 340
 Looking for a Little Variation with ϵ 341
 Taking a Moment with μ 341
 Looking for Mary’s Little λ 341
 Wearing Your ΦBK Key 342
 Coming to the End with ω 342

Glossary 343
