	An Introduction to Soft Matter	1
	<i>Gerhard Gompper and Michael Schick</i>	
1	Polymer Dynamics in Melts	17
	<i>Andreas Wischnewski and Dieter Richter</i>	
1.1	Introduction	18
1.2	What is a Polymer?	20
1.2.1	Synthesis of Polymers	21
1.3	Experimental Techniques	25
1.3.1	Neutron Scattering	25
1.3.2	Rheology	36
1.4	Static Properties	38
1.5	Brownian Motion, Viscous and Entropic Forces: the Rouse Model	45
1.5.1	Experimental Studies of the Rouse Model	49
1.6	Topological Constraints: the Tube Concept	55
1.6.1	Validating the Tube Concept on a Molecular Scale	59
1.7	Limiting Mechanisms for Reptation I: CLF	69
1.8	Limiting Mechanisms for Reptation II: CR	77
1.9	Summary and Outlook	81
2	Self-Consistent Field Theory and Its Applications	87
	<i>Mark W. Matsen</i>	
2.1	Introduction	87
2.2	Gaussian Chain	91
2.3	Gaussian Chain in an External Field	96
2.4	Strong-Stretching Theory (SST): the Classical Path	102
2.5	Analogy with Quantum/Classical Mechanics	103
2.6	Mathematical Techniques and Approximations	105
2.6.1	Spectral Method	106

2.6.2	Ground-State Dominance	107
2.6.3	Fourier Representation	109
2.6.4	Random-Phase Approximation	111
2.7	Polymer Brushes	114
2.7.1	SST for a Brush: the Parabolic Potential	115
2.7.2	Path-Integral Formalism for a Parabolic Potential	117
2.7.3	Diffusion Equation for a Parabolic Potential	120
2.7.4	Self-Consistent Field Theory (SCFT) for a Brush	121
2.7.5	Boundary Conditions	125
2.7.6	Spectral Solution to SCFT	127
2.8	Polymer Blends	133
2.8.1	SCFT for a Polymer Blend	135
2.8.2	Homogeneous Phases and Macrophase Separation	137
2.8.3	Scattering Function for a Homogeneous Blend	140
2.8.4	SCFT for a Homopolymer Interface	143
2.8.5	Interface in a Strongly Segregated Blend	145
2.8.6	Grand-Canonical Ensemble	148
2.9	Block Copolymer Melts	152
2.9.1	SCFT for a Diblock Copolymer Melt	152
2.9.2	Scattering Function for the Disordered Phase	154
2.9.3	Spectral Method for the Ordered Phases	156
2.9.4	SST for the Ordered Phases	163
2.10	Current Track Record and Future Outlook for SCFT	167
2.11	Beyond SCFT: Fluctuation Corrections	169
2.12	Appendix: The Calculus of Functionals	172
3	Comparison of Self-Consistent Field Theory and Monte Carlo Simulations	179
	<i>Marcus Müller</i>	
3.1	Introduction	180
3.2	Polymer Blends	182
3.2.1	Coarse-Grained Polymer Models	182
3.2.2	A Coarse-Grained Model for Binary Polymer Blends	187
3.2.3	Self-Consistent Field (SCF) Theory and Fluctuation Effects	190
3.2.4	Identifying the Effective Flory–Huggins Parameter, $\tilde{\chi}$	213
3.2.5	Single-Chain Conformations in the Bulk	225
3.2.6	Interfaces	229
3.3	Liquid–Vapor Interfaces	245
3.3.1	Formalism	246
3.3.2	Approximating the Excess Interaction Free-Energy Functional ΔF_{ex}	248
3.3.3	Comparison to Computer Simulations	261

3.4	Outlook	266
3.5	Appendix	267
3.5.1	Fluctuations in the Spatially Homogeneous Phase	267
3.5.2	Alternative Derivation of the SCF Equations for Liquid–Vapor Systems	271
	Index	283
