

Index

a

additives 12
 amphipathic 6
 amphiphile 6

b

bead–spring model 191, 222,
 249, 256
 bicontinuous structure 7
 bilayer membrane 7
 binodal 205, 211, 217, 229, 257
 – point 140
 block copolymer microstructure
 90, 158
 bond fluctuation model 188,
 191, 192, 201, 209, 215, 230
 bond length 38
 boundary conditions 125
 Bragg condition 143
 Brazovskii fluctuations 170

c

capillary waves 208, 214, 230,
 231, 236, 245, 262, 264
 chain entropy 9
 chemical potential 148, 202
 classical path 102, 105
 classical phases 158
 coarse-grained parameters 184,
 213, 246
 colloidal suspensions 4
 complex phases 158

complexity 14
 composites 14
 composition fluctuations 169,
 198, 204, 205, 211, 214, 217,
 223, 229, 236, 244, 266, 271
 conformational asymmetry 162
 constraint release 77
 contour length 56
 – fluctuations 72
 copolymer 87
 course-grained segment 93
 course-grained trajectory 97
 critical point 140, 184, 187, 205,
 210, 214, 216, 224, 236, 244,
 253, 257, 265, 270

d

Debye function 44, 47, 48, 50,
 189, 206, 268
 deformability 1
 degree of polymerization 89, 96
 depletion interaction 13
 diffusion coefficient 68
 diffusion equation 100
 dimensionless segment
 concentration 97
 Dirac δ function 173
 dispersion colloids 4
 DNA 5
 double-tangent construction 139

e

effective interaction 12
 elastic free energy 101
 end-segment distribution 116
 end-to-end distance 38, 56, 58
 end-to-end vector 92, 183, 187,
 206, 209, 226, 229, 240, 263
 Euler–Lagrange equation 175
 exclusion zone 166

f

f \bar{d} virus 5, 14
 Flory–Huggins free energy 138,
 202, 214, 245
 Flory–Huggins parameter 181,
 186, 187, 202, 210, 212, 214,
 217, 222, 230, 236, 239, 266
 Fourier transform 109
 freely jointed chain 92
 functional 172
 – derivative 173
 – integration 175

g

Gaussian chain 42
 – model 94, 186
 ground-state dominance 107

h

hard-core potential 12
 homopolymer 87, 182
 Hubbard–Stratonovich
 transformation 170, 193, 247
 hydrophilic 6
 hydrophobic 6

i

incompressibility constraint
 125, 134
 indistinguishability 135
 interaction χ parameter 134
 interfacial tension 145, 148

interfacial width 145, 147, 148,
 158, 163
 internal energy 134
 intrinsic profile 214, 235
 invariant polymerization index
 96, 187, 204, 207, 212, 217,
 220, 225, 245, 270

k

Kuhn length 42

l

Landau–Ginzburg free energy
 108, 113, 169
 Lennard-Jones potential 133
 lever rule 139
 lipid 6
 – bilayer 7
 living polymerization 23
 living polymers 14
 local reptation 55
 loss modulus 37

m

macrophase separation 138
 melt viscosity 68
 membrane lipid 6
 method of steepest descent 123
 micelles 8
 microemulsion 8
 microphase separation 152
 molecular orientation 185, 242,
 249, 262, 264
 monomer 87

n

nucleation and growth 140

o

orthonormal basis functions 106

p

P-RISM theory 212, 224, 229, 260
 packing effects 189, 193, 212, 222, 227, 245, 250, 262, 266
 pair correlation function 28
 phosphatidyl choline 6
 plateau modulus 64
 polymer blend 180, 182, 186, 187, 190, 198, 206, 211, 226, 230, 244, 266
 polymer brush 90, 114
 polymer interface 90
 primitive path 56

r

radius of gyration 41
 random-phase approximation 111, 267
 red blood cell 3
 reptation 55
 rheology 66
 Rouse dynamics 45, 55, 56, 58, 60, 62, 63, 66, 67

s

saddle point 123
 scattering function 141, 155
 self-consistent field condition 137, 149, 198, 247
 self-correlation function 28
 shear modulus 1
 sifting property 174

sodium dodecyl sulfonate 6
 soft matter 1, 11
 – composites 14
 spectral method 106, 127, 143, 156
 spinodal 204, 205, 270
 – decomposition 140
 – point 140
 sponge phase 8
 spring–bead model 43, 45
 statistical segment length 94, 183, 188, 210, 222, 239
 Stirling approximation 136
 storage modulus 37
 surfactant 6
 suspensions 4

t

time–temperature superposition 38
 tobacco mosaic virus 5
 transfer matrix 129
 tube concept 55, 61–63
 tube survival probability 63

u

unit-cell approximation 162
 universality 13

w

weak and strong segregation limits 203, 207, 209, 214, 235
 worm-like chain model 167, 239
