Part I: Design	1
Chapter 1: Language Selection	3
<hr/>	
Language Addiction	3
Disadvantages	4
Interpreted, Not Compiled	4
Language Features	6
Multiple Inheritance	7
Platform Dependencies	8
Upgrading from Visual Basic 6	8
GUI Building	8
Verbosity	9
Power and Flexibility	9
Advantages	9
Self-Documenting	10
Prototyping and Simple Applications	10
IDE	11
Language Relatives	11
Garbage Collection	11
Large Talent Pool	12
Summary	12

Contents

Chapter 2: Lifecycle Methodologies	15
Lifecycle Stages	15
Idea Formulation and Refinement	16
Team Building	17
Requirements Gathering	19
Feasibility Analysis	21
High-Level Design	23
Lower-Level Design	24
Implementation	25
Testing	26
Deployment	30
Support	31
Lifecycle Models	33
Throwaway	34
Waterfall	34
Prototyping	40
Mix and Match	46
Summary	47
Chapter 3: Agile Methodologies	49
Agile Programming	49
Crystal Clear	51
Extreme Programming (XP)	52
Agile Versus Traditional Lifecycles	60
Agile Strengths and Weaknesses	61
Design by Contract	62
Microsoft Tools for Agile Development	67
Summary	68
Chapter 4: Object-Oriented Design	69
The Bug Hunter Example	69
Building an Object Model	70
Picking Candidate Classes	70
Converting Candidates into Classes	71
Adding Internal Classes	74
Adding Database Classes	75
Studying Different Design Views	75
Improving the Classes	76
UML	79
Use Case Diagrams	80
Class Diagrams	83

Sequence Diagrams	85
Activity Diagrams	86
State Chart Diagrams	87
Component Diagrams	89
Deployment Diagrams	90
UML Summary	91
UML Tools	92
Summary	95
Chapter 5: User-Interface Design	97
UI Design Philosophy	98
Give the User Control	98
Focus on Tasks	98
Advise, Don't Act	99
Help Users Do the Right Thing	100
Users	101
Understand the User's Job	101
Respect the User	101
Understand the User's Environment	102
Understand User Types	102
Forms	104
MDI versus SDI	104
Resizing Forms	105
Editors	107
Property Sheets	108
Design Principles	109
Prototype in Stages	110
Promote Form Flow	110
Group Related Items	113
Support Resizing	114
Support Different Font Sizes	115
Optimize Menus	119
Use Space Wisely	121
Design Good Headers	122
Preserve State	122
Undo and Redo	123
Accommodate Different Skills Levels	127
Provide Appropriate Feedback	129
Consistency	131
Summary	131

Contents

Chapter 6: Data Storage Design **133**

Relational Databases	133
Relational Database Products	139
Compiled-In Data	140
Resource Files	145
Satellite Assemblies	148
System Registry	149
INI Files	154
XML	157
Other Text File Formats	159
Object Databases	160
Summary	162

Chapter 7: Design Patterns **163**

Creation Patterns	164
Clone	164
Factory	168
Relation Patterns	170
Adapter	171
Facade	171
Interface	172
Behavior Patterns	172
Abstract Base Class	173
Chain of Responsibility	176
Chain of Events	178
Command	181
Delegation	183
Model, View, Controller	185
Property Procedure	193
Snapshot	195
Strategy	199
For More Information	201
Summary	201

Part II: Meta-Development **203**

Chapter 8: Snippets, Macros, and Add-ins **205**

Snippets	205
Using Snippets	206
Making Snippets	208

Installing Snippets	211
Sharing Snippets	211
Macros	212
Recording Macros	213
Editing Macros	214
Modifying Macros	214
Using Sample Macros	218
Customizing Visual Studio	218
Sharing Macros	221
Add-ins	222
Making an Add-in	222
Adding Add-in Code	227
Making a Better Add-in	230
Learning About Other Objects	231
Summary	236
Chapter 9: Scripting	237
Scripting Safely	237
Executing SQL Statements	241
Running Queries	241
Generating Queries	244
Running Commands	247
Executing Visual Basic Code	251
Running Code	251
Exposing an Object Model	254
Simplifying Scripting	257
Evaluating Expressions	259
Summary	261
Chapter 10: Custom Controls and Components	263
Building Derived Controls	264
Setting Toolbox Bitmaps	270
Testing Controls	271
Building UserControl	272
Building Controls from Scratch	275
Building Components	282
Building Extender Providers	287
A Simple Example	289
A More Useful Example	291
Summary	294

Contents

Chapter 11: Property Support	297
Customizations Overview	298
Displaying and Editing LineWidth	304
LineWidthEditor	304
LineWidthListBox	306
Displaying and Editing LineColor	307
Displaying and Editing PolyPolyline	308
PolyPolylineConverter	309
PolyPolylineEditor	310
Displaying Smart Tags	313
Displaying Property Sheets	319
Displaying Object Properties	322
Summary	328
Chapter 12: Attributes and XML Comments	329
Attributes	330
Helping the Properties Window	332
Helping the Form Designer	339
Helping the Code Editor	340
Helping Serialization	344
XML Comments	347
Automatic Documentation	348
Design-Time Support	350
Recommended Tags	351
Recommendations	355
Summary	357
Part III: Development	359
Chapter 13: Documentation	361
Documentation Timing	361
Documentation Types	364
User Documentation	364
Developer Documentation	369
XML Documentation	373
Custom XML Tags	374
Using XML Documentation	375
Program XmlDocToText	376
Program XmlDocToHtml	381
Summary	388

Chapter 14: Development Philosophy	391
Program for People	392
Keep the User in Charge	393
Make the Program Find Errors	394
Make it Work First	395
Look Before You Leap	397
Do a Good Job; Then Move On	398
Use Object-Oriented Principles	399
Take Advantage of Visual Studio	400
Beware of the Weakest Link	401
Save Everything	403
Avoid the Bleeding Edge	404
Use the Agile Smorgasbord	405
Summary	406
Chapter 15: Coding Standards	409
Names	410
Hungarian Notation	410
Component Names	411
Constant Names	413
Routine Variable Names	413
Other Names	414
Boolean Names	415
Abbreviations	415
Escaped Names	416
Class Names	416
Property Names	417
Method Names	417
Event Names	418
Declaring Variables	419
Overloading and Optional Parameters	422
ParamArrays	426
If Then and Select Case	427
Block Endings	429
Exit Points	430
Exit For, Exit Do, and Continue	431
End	432
Summary	432

Contents

Chapter 16: Bug Proofing	435
Catching Bugs	435
Waiting for Bugs	436
Global Error Handling	438
Hunting for Bugs	441
Try Catch Blocks	445
Responding to Bugs	447
Summary	451
Chapter 17: Testing	453
Testing Philosophy	453
Test Early and Often	454
Test Everything	455
Save Tests Forever	455
Don't Shoot the Messenger	456
Kinds of Tests	456
Sub-Unit Tests	456
Unit Tests	457
Integration Tests	458
System Tests	458
Regression Tests	459
Test Techniques	459
Exhaustive Testing	460
Black Box Testing	460
White Box Testing	461
Random Testing	461
Testing Mechanics	461
Testing Inside the Application	461
Testing Outside the Application	464
A Testing Example	465
Testing Tools	467
Visual Studio Testing Tools	470
GUI Testing	471
Summary	475
Chapter 18: Deployment	477
Deployment Models	477
User Types	478
Major and Minor Releases	479
Agile Releases	480

Deployment Methods	480
ClickOnce	480
Windows Installer	486
Other Solutions	490
Xcopy	491
Summary	492
Part IV: Specific Techniques	493
Chapter 19: Splash Screens	495
<hr/>	
Determining Splash Screen Contents	496
Displaying Splash Screens	498
Displaying About Dialogs	500
Providing Feedback	500
Controlling Item Placement	501
Shaping Forms	502
Filling Text	504
Rotating Text	505
Displaying Hidden Screens	506
Summary	508
Chapter 20: Printing	511
<hr/>	
Event-Driven Printing	512
Printing Forms	514
Wrapping Text	518
Flowing Text	522
Printing Procedurally	528
Summary	532
Chapter 21: Threading	535
<hr/>	
Threading Pros and Cons	536
Advantages	536
Disadvantages	537
Using Background Workers	542
UI Threading	542
Providing Feedback	547
Providing Graphical Feedback	550
Dividing Tasks	551
Understanding SyncLock	554
Summary	557

Chapter 22: Reflection	559
Exploring Assemblies	559
Exploring Enumerations	567
Loading Classes Dynamically	571
Invoking Methods Dynamically	575
Discovering Resources	577
Retrieving Known Resources	580
Summary	583
Chapter 23: Memory Management	585
Garbage Collection	585
Finalization	587
Disposing Resources	589
Disposing Custom Classes	590
Pre-allocating Objects	591
Weak References	595
Improving Garbage Collection	597
Summary	599
Index	601
