

# Contents

<b>Preface</b>	<b>xiii</b>
<b>1. Introduction</b>	<b>1</b>
1.1. Medical Imaging: A Collaborative Paradigm / 2	
1.2. Medical Imaging Modalities / 3	
1.3. Medical Imaging: From Physiology to Information Processing / 6	
1.4. General Performance Measures / 8	
1.5. Biomedical Image Processing and Analysis / 11	
1.6. Exercises / 14	
1.7. References / 16	
1.8. Definitions / 16	
<b>2. Image Formation</b>	<b>19</b>
2.1. Image Coordinate System / 21	
2.2. Linear Systems and Impulse Response / 22	
2.3. Principle of Image Formation / 22	
2.4. Pin-Hole Imaging / 26	
2.5. Fourier Transform / 27	
2.6. Radon Transform / 30	
2.7. Sampling / 32	
2.8. Discrete Fourier Transform / 37	
2.9. Exercises / 37	
2.10. References / 38	
<b>3. Interaction of Electromagnetic Radiation with Matter in Medical Imaging</b>	<b>41</b>
3.1. Electromagnetic (EM) Radiation / 42	
3.2. EM Radiation for Image Formation / 43	

3.3.	Radiation Interaction with Matter / 43	
3.4.	Linear Attenuation Coefficient / 46	
3.5.	Radiation Detection / 47	
3.6.	Exercises / 51	
3.7.	References / 51	
<b>4.</b>	<b>Medical Imaging Modalities</b>	<b>53</b>
4.1.	X-Ray Imaging / 54	
4.2.	Magnetic Resonance Imaging / 62	
4.3.	Nuclear Medicine Imaging Modalities / 91	
4.4.	Ultrasound Imaging / 99	
4.5.	Exercises / 107	
4.6.	References / 108	
<b>5.</b>	<b>Image Reconstruction</b>	<b>111</b>
5.1.	Mathematical Preliminaries and Basic Reconstruction Methods / 112	
5.2.	Image Reconstruction in Medical Imaging Modalities / 125	
5.3.	Exercises / 133	
5.4.	References / 134	
<b>6.</b>	<b>Image Enhancement</b>	<b>139</b>
6.1.	Spatial Domain Methods / 140	
6.2.	Frequency Domain Filtering / 153	
6.3.	Wavelet Transform for Image Processing / 162	
6.4.	Exercises / 170	
6.5.	References / 172	
<b>7.</b>	<b>Image Segmentation</b>	<b>175</b>
7.1.	Edge-Based Image Segmentation / 176	
7.2.	Pixel-Based Direct Classification Methods / 181	
7.3.	Region-Based Segmentation / 189	
7.4.	Recent Advances in Segmentation / 193	
7.5.	Exercises / 207	
7.6.	References / 208	
<b>8.</b>	<b>Image Representation and Analysis</b>	<b>211</b>
8.1.	Feature Extraction and Representation / 214	
8.2.	Feature and Image Classification / 233	
8.3.	Image Analysis Example: Analysis of Difficult-to-Diagnose Mammographic Microcalcifications / 242	
8.4.	Exercises / 246	
8.5.	References / 248	

<b>9. Image Registration</b>	<b>251</b>
9.1. Rigid-Body Transformation / 254	
9.2. Principal Axes Registration / 257	
9.3. Iterative Principal Axes Registration / 259	
9.4. Image Landmarks and Features Based Registration / 264	
9.5. Elastic Deformation Based Registration / 268	
9.6. Exercises / 273	
9.7. References / 274	
<b>10. Image Visualization</b>	<b>277</b>
10.1. Feature Enhanced 2-D Image Display Methods / 278	
10.2. Stereo Vision and Semi 3-D Display Methods / 278	
10.3. Surface and Volume Based 3-D Display Methods / 280	
10.4. Virtual Reality Based Interactive Visualization / 290	
10.5. Exercises / 291	
10.6. References / 293	
<b>11. Current and Future Trends in Medical Imaging and Image Analysis</b>	<b>297</b>
11.1. Multi-Parameter Medical Imaging / 297	
11.2. Model-Based Medical Image Analysis / 301	
11.3. References / 304	
<b>Appendix</b>	<b>307</b>
<b>Index</b>	<b>309</b>
