backwards normal problems
 fish length example, 181–186
 overview, 180–181
 returning to X units, using Z-formula
 solved for X, 185–186
 setting up, 181–183
 using Z table backward, 183–185
 finding Z given greater-than
 probability, 184–185
 finding Z given less-than probability,
 183–184
 overview, 183
bank entry example, 248
basketball free throw example
 contingency table, 68–73
 expected value of variance formulas,
 271–272
 geometric distribution, 256
 negative binomial probability formula,
 266–268, 270
 whether 50-50 situation, 17
basketball tournament example, 16

Bayes' Theorem

 blood test example, 60, 63
 finding posterior probability with,
 60–64
 formalizing Bayes' Theorem, 61–62
 overview, 60–61
 setting up tree diagram and putting in
 probabilities, 62
 grocery example, 56
 restaurant example, 61–63, 64
beads in jar example, 154
between-values probabilities
 and cdf, 142–143
 for an exponential, 305–307
BINGO, 121–124
 overview, 121
 probability of winning, 123–124
 ways to win, 121–123
binomial distribution
 approximating with normal distribution
 coin example, 197–200
 determining if n is large enough,
 192–193
 finding mean and standard deviation
 to put in Z-formula, 193
 identifying when you need to, 187–188
 making continuity correction, 194–197
 overview, 187, 192
 why normal approximation works
 when n is large enough, 188–192
beads in jar example, 154
cdf of, table, 333–336
choosing geometric distribution over,
 253–254
coin flip example, 152–157, 163
comparing and contrasting with
 negative binomial distribution,
 262–263
expected value of binomial, 165

binomial distribution (*continued*)

- finding probabilities for binomial,
 - 155–164
 - with cdf, 160–164
 - overview, 155
 - with pmf, 155–160
- negative
 - applying expected value and variance formulas, 271–272
 - applying negative binomial pmf, 265–269
 - checking off conditions for, 262
 - comparing and contrasting with geometric and binomial models, 262–263
 - developing negative binomial probability formula, 264–265
 - expected value of, 269–270
 - overview, 261
 - recognizing, 261–263
 - variance and standard deviation of, 270–271
- overview, 151
- versus Poisson distribution, 237
- recognizing
 - checking binomial conditions step by step, 152–153
 - overview, 151–152
 - spotting variable that isn't binomial, 153–154
- traffic light example, 157–158, 161
- variance and standard deviation of binomial, 166
- birdfeeder example, 14, 15
- birth and death process, 309
- birth rates, 235
- birthday problem, 103
- blood test example, 60, 63
- Bonferroni approach, 230
- brackets, 22
- branches, in tree diagrams, 48

• C •

- calculus, 301
- capture-recapture technique, 282
- car insurance example, 11
- cards example. *See also* Poker hands
 - combinations, 92–93, 101
 - independence or exclusivity, 37
 - mutually exclusive events, 35–36
- carpet blemish example, 241, 242, 244–245
- cdf. *See* cumulative distribution function
- cells, 69
- center, of normal distribution, 168–170
- Central Limit Theorem (CLT)
 - applied to sample mean, 215
 - applied to sample proportion, 217–218
 - applied to sample total, 210–211
 - die-rolling example, 207–214, 216–217, 219
 - main results of, 205–206
 - overview, 205
 - why works, 206–210
- chance, concept of, 10
- checking answers, 319–321
- checking conditions, 317
- classical approach to probability
 - die-roll example, 13
 - random processes, 14
 - refrigerator-repair example, 14
- CLT. *See* Central Limit Theorem
- coin-flipping example
 - approximate binomials, 188
 - binomial conditions, 152–154
 - binomial probabilities, 156–157, 163
 - independent events, 51
 - mutually exclusive events, 35
 - normal approximation to binomial, 193, 197–200
 - patterns, 18
 - symmetric situations, 191

- columns, in contingency tables, 69
- columns bet, 117, 120
- combinations
 - cards example, 92–102
 - comic book example, 102
 - committee-choosing example, 100–101
 - confusing with permutations, 330–331
 - finding probabilities involving
 - calculating probabilities for poker hands, 101–102
 - choosing with restrictions, 100–101
 - grouping and regrouping, 102
 - overview, 100
 - lottery example, 92–93
 - overview, 88
 - and Pascal’s Triangle, 90–91
 - probability problems involving
 - overview, 91
 - picking items in any order with no repeats allowed, 92
 - picking items in any order with repeats allowed, 92–93
 - splitting objects or individuals into two groups, 91
 - seating arrangement example, 91
 - solving combination problems, 89
- comic book example, 102
- committee-choosing example
 - combinations, 100–101
 - hypergeometric distribution, 274–282
 - represented by tree diagram, 52–56
- complement probabilities, 26–27
- complement rule, 29–30, 178
- complements, 23, 35
- complex problems, finding probabilities
 - for with Venn diagrams
 - answering “exactly one” question, 47
 - answering “neither” question, 46–47
 - overview, 45
 - setting up diagram, 45–46
 - computer game example, 298
- conditional probabilities, 24
 - die-roll example, 27
 - identifying, 38
 - organizing with tree diagrams
 - connecting tree’s branches to rules of probability, 53–54
 - for dependent events, 52–53
 - for independent events, 51
 - overview, 51
- confidence intervals
 - assessing cost of probably, 224–225
 - creating for p , 222–223
 - die-roll probability example, 225
 - dog “debris” example, 222
 - figuring with Z table, 223–224
 - interpreting with probability, 225
 - overview, 221–222
- Consumer Reports* magazine, and relative frequency approach, 15
- contingency tables
 - basket ball free throw example, 68–73
 - checking for independence of two events, 74–75
 - finding and interpreting probabilities within
 - calculating marginal probabilities, 71–72
 - figuring joint probabilities, 71
 - identifying conditional probabilities, 72–73
 - overview, 70
 - organizing
 - adding row, column, and grand totals, 70
 - defining sample space, 68
 - inserting data, 69
 - overview, 67–68
 - setting up rows and columns, 69
 - overview, 67
- continuous distribution, 167, 190
- continuous random variables, 133

- continuous uniform distribution
 - corralling cumulative probabilities, using $F(x)$, 294–296
 - determining density function for, 287–290
 - building general form of $f(x)$, 287–288
 - finding $f(x)$ given a and b , 288–289
 - finding value of b given $f(x)$, 289–290
 - overview, 287
 - drawing up probabilities for, 290–294
 - finding greater-than probabilities, 292–293
 - finding less-than probabilities, 291–292
 - finding probabilities between two values, 293–294
 - overview, 290
 - expected value of, 297
 - overview, 285–286
 - variance and standard deviation of, 297–298
 - corner bet, 119, 120
 - countably infinite sample spaces, 20
