

# Contents

Preface	xv
Acknowledgments	xix
1 Introduction	1
1.1 The Goal	1
1.2 Design for Six Sigma – State of the Art	2
1.3 Approach	3
1.4 Guide to This Book	7
2 Driving Growth through Innovation	11
2.1 Delivering on the Promise	11
2.2 Creating a Better Promise	12
2.3 Ambidextrous Organization	14
2.4 Platforms for Growth	17
2.5 Innovation and Design	18
2.5.1 Managing the Paradox of Preservation and Evolution	20
2.5.2 Types of Paradoxes	21
2.6 Conclusions	28
3 Process for Systematic Innovation	29
3.1 Balanced Innovation Portfolio	30
3.2 Effective Teams for Collaboration	32
3.3 Process for Executing Innovation Projects	35

3.4	Proven Techniques and Tools	38
3.5	Climate for Innovation	39
3.6	The Governance System	40
4	Lean Six Sigma Essentials	41
4.1	Origins of Six Sigma	42
4.2	Six Sigma Approach	43
4.3	Origins of Lean	47
4.4	Lean Six Sigma: Faster, Better, and Cheaper	55
5	Deploying Design for Lean Six Sigma	59
5.1	Deploying DFLSS	59
5.2	Design for Lean Six Sigma Enterprise	66
5.2.1	Executive Sponsors	67
5.2.2	Deployment Champions	68
5.2.3	Design Project Champions	68
5.2.4	Design Black Belts	68
5.2.5	Core Team	68
5.2.6	Extended Team	69
5.2.7	Building Support Infrastructure	69
6	Capturing the Voice of the Customer	73
6.1	Defining Elements of Customer–Producer Relationship	75
6.2	Customer Expectations	78
6.3	Methods of Collecting Customer Expectations	83
6.4	Research Ethics	89
7	Design Axioms and Their Usefulness in DFLSS	91
7.1	Design Axioms	92
7.2	Domain Thinking	93
7.3	Designing of MTS Software System	96
7.4	Designing a System that Will Market Sporting Goods	101

Contents		ix
7.5	Designing a Fan Belt/Pulley System	104
7.6	Use of Design Principles in an Academic Department	106
7.6.1	Mechanical Engineering Department at MIT	106
7.6.2	FR-DP Identification	108
7.6.3	Actions Taken	109
7.7	Designing a University System that Will Teach Students Only through the Internet	112
8	Implementing Lean Design	115
8.1	Key Principles of Lean Design	115
8.2	Strategies for Maximizing Value and Minimizing Costs and Harm	118
8.3	Modular Designs	118
8.4	Value Engineering	122
8.5	The 3P (Production, Preparation, Process) Approach	123
9	Theory of Inventive Problem Solving (TRIZ)	127
9.1	Introduction to TRIZ	127
9.2	TRIZ Journey	129
9.2.1	TRIZ Road Map	129
9.2.2	Ideality Equation	131
9.2.3	Itself Method	132
9.2.4	TRIZ Analysis Tools	132
9.2.5	TRIZ Database Tools	139
9.3	Case Examples of TRIZ	147
9.3.1	Improving the Process of Fluorination	147
9.3.2	Coordinate Measuring Machine (CMM) Support Problem	152

9.4	Robustness through Inventions	157
9.4.1	What Is a Robustness Invention?	159
9.4.2	Research Methodology	160
9.4.3	Results of the Patent Search	161
9.4.4	Robust Invention Classification Scheme	161
9.4.5	Signal-based–Robust Invention	163
9.4.6	Response-based Robust Invention	165
9.4.7	Noise-factor–based Robust Invention	167
9.4.8	Control-factor–based Robust Invention	169
10	Design for Robustness	171
10.1	Engineered Quality	171
10.1.1	Evaluation of the Function Using Energy Transformation	173
10.1.2	Studying the Interactions between Control and Noise Factors	174
10.1.3	Use of Orthogonal Arrays (OAs) and Signal-to-Noise Ratios to Improve Robustness	174
10.1.4	Two-step Optimization	174
10.1.5	Tolerance Design Using Quality Loss Function	174
10.2	Additional Topics in Designing for Robustness	175
10.2.1	Parameter Diagram (P-diagram)	175
10.2.2	Design of Experiments	176
10.2.3	Signal-to-Noise (S/N) Ratios	178
10.3	Role of Simulations in Design for Robustness	179
10.4	Example – Circuit Stability Design	180
10.4.1	Control Factors and Noise Factors	181
10.4.2	Parameter Design	182

10.5	PCB Drilled-hole Quality Improvement	184
10.5.1	Introduction	185
10.5.2	Drilled-hole Quality Characteristics	186
10.5.3	Background	186
10.5.4	Hole-quality Standard	187
10.5.5	Experiment Description	190
10.5.6	Selection of Levels for These Factors	191
10.5.7	Designing the Experiment	192
10.5.8	Predictions and Confirmation Run	195
10.5.9	Benefits	196
10.6	Design of a Valveless Micropump Using Taguchi Methods	197
10.6.1	Introduction	197
10.6.2	Working Principle and Finite Element Modeling	199
10.6.3	Design for Robustness	200
10.6.4	Conclusions	208
11	Robust System Testing	209
11.1	Introduction	209
11.1.1	A Typical System Used in Testing	210
11.1.2	Role of the Orthogonal Arrays	211
11.2	Method of Software Testing	212
11.2.1	Study of Two-factor Combinations	213
11.2.2	Construction of Combination Tables	213
11.3	MTS Software Testing (Case Study 1)	215
11.4	Case Study 2	219
11.4.1	Analysis of Results	221
11.4.2	Debugging the Software	221
11.5	Conclusions	223
12	Development of Multivariate Measurement System Using the Mahalanobis–Taguchi Strategy	225

12.1	What Is Mahalanobis–Taguchi Strategy?	226
12.2	Stages in MTS	229
12.3	Signal-to-Noise Ratio – A Measure of Prediction Accuracy	231
12.3.1	Types of S/N Ratios in MTS	232
12.4	Medical Case Study	234
12.4.1	Stage 1: Development of Measurement Scale Using Mahalanobis Space	234
12.4.2	Stage 2: Validation of the Measurement Scale	235
12.4.3	Stage 3: Identification of Useful Variables (Development Stage)	236
12.5	Case Example 2: Auto Marketing Case Study	240
12.5.1	Introduction	240
12.5.2	Construction of Mahalanobis Space	241
12.5.3	Validation of the Measurement Scale	241
12.5.4	Identification of Useful Variables	242
12.6	Case Study 3: Improving Client Experience	245
12.6.1	Methodology	245
12.6.2	Improvements Made Based on Recommendations from MTS Analysis	246
12.7	Improvement of the Utility Rate of Nitrogen while Brewing Soy Sauce	247
12.7.1	Introduction	247
12.7.2	Process of Producing Soy Sauce or Tamari	248
12.7.3	Selection of Factors for MTS Application	248
12.7.4	MTS for Aging	249
12.7.5	MTS for Koji-molding	249

12.8	Application of MTS for Measuring Oil in Water Emulsion	250
12.8.1	Introduction	250
12.8.2	Application of MTS	251
12.9	Prediction of Fasting Plasma Glucose (FPG) from Repetitive Annual Health Check-up Data	252
12.9.1	Introduction	252
12.9.2	Diabetes Mellitus	253
12.9.3	Application of MTS	253
	References	255
	<b>Appendixes</b>	<b>263</b>
	Appendix A: TRIZ Contradiction Matrix	265
	Appendix B: 40 TRIZ Inventive Principles	267
	Appendix C: Some Useful Orthogonal Arrays	269
	Appendix D: Equations for Signal-to-noise (S/N) Ratios	277
	Appendix E: Related Topics of Matrix Theory	281
	Index	287
