Preface	xi
1 Single-degree-of-freedom Systems	1
1.1 Introduction	1
1.2 Spring–Mass System	1
1.3 Spring–Mass–Damper System	4
1.4 Forced Response	8
1.5 Transfer Functions and Frequency Methods	14
1.6 Measurement and Testing	19
1.7 Stability	22
1.8 Design and Control of Vibrations	24
1.9 Nonlinear Vibrations	27
1.10 Computing and Simulation in MATLAB	29
Chapter Notes	35
References	35
Problems	36
2 Lumped-parameter Models	39
2.1 Introduction	39
2.2 Classifications of Systems	42
2.3 Feedback Control Systems	44
2.4 Examples	45
2.5 Experimental Models	49
2.6 Influence Methods	50
2.7 Nonlinear Models and Equilibrium	52
Chapter Notes	54
References	55
Problems	55
3 Matrices and the Free Response	57
3.1 Introduction	57
3.2 Eigenvalues and Eigenvectors	58
3.3 Natural Frequencies and Mode Shapes	63

vi CONTENTS

3.4	Canonical Forms	71
3.5	Lambda Matrices	74
3.6	Oscillation Results	77
3.7	Eigenvalue Estimates	81
3.8	Computation Eigenvalue Problems in MATLAB	88
3.9	Numerical Simulation of the Time Response in MATLAB	91
	Chapter Notes	93
	References	94
	Problems	95
4	Stability	99
4.1	Introduction	99
4.2	Lyapunov Stability	99
4.3	Conservative Systems	101
4.4	Systems with Damping	103
4.5	Semidefinite Damping	103
4.6	Gyroscopic Systems	104
4.7	Damped Gyroscopic Systems	106
4.8	Circulatory Systems	107
4.9	Asymmetric Systems	109
4.10	Feedback Systems	113
4.11	Stability in State Space	116
4.12	Stability Boundaries	118
	Chapter Notes	119
	References	120
	Problems	121
5	Forced Response of Lumped-parameter Systems	123
5.1	Introduction	123
5.2	Response via State-space Methods	123
5.3	Decoupling Conditions and Modal Analysis	128
5.4	Response of Systems with Damping	132
5.5	Bounded-input, Bounded-output Stability	134
5.6	Response Bounds	136
5.7	Frequency Response Methods	138
5.8	Numerical Simulation in MATLAB	140
	Chapter Notes	142
	References	142
	Problems	143
6	Design Considerations	145
6.1	Introduction	145
6.2	Isolators and Absorbers	145
6.3	Optimization Methods	148
6.4	Damping Design	153
6.5	Design Sensitivity and Redesign	155
6.6	Passive and Active Control	158

6.7	Design Specifications	160
6.8	Model Reduction	161
	Chapter Notes	164
	References	165
	Problems	165
7	Control of Vibrations	169
7.1	Introduction	169
7.2	Controllability and Observability	171
7.3	Eigenstructure Assignment	176
7.4	Optimal Control	179
7.5	Observers (Estimators)	185
7.6	Realization	190
7.7	Reduced-order Modeling	192
7.8	Modal Control in State Space	198
7.9	Modal Control in Physical Space	202
7.10	Robustness	206
7.11	Positive Position Feedback	208
7.12	MATLAB Commands for Control Calculations	211
	Chapter Notes	216
	References	217
	Problems	218
8	Modal Testing	221
8.1	Introduction	221
8.2	Measurement Hardware	222
8.3	Digital Signal Processing	225
8.4	Random Signal Analysis	229
8.5	Modal Data Extraction (Frequency Domain)	232
8.6	Modal Data Extraction (Time Domain)	235
8.7	Model Identification	241
8.8	Model Updating	243
	Chapter Notes	244
	References	245
	Problems	246
9	Distributed-parameter Models	249
9.1	Introduction	249
9.2	Vibration of Strings	249
9.3	Rods and Bars	256
9.4	Vibration of Beams	260
9.5	Membranes and Plates	264
9.6	Layered Materials	268
9.7	Viscous Damping	270
	Chapter Notes	271
	References	272
	Problems	273

10	Formal Methods of Solution	275
10.1	Introduction	275
10.2	Boundary Value Problems and Eigenfunctions	275
10.3	Modal Analysis of the Free Response	278
10.4	Modal Analysis in Damped Systems	280
10.5	Transform Methods	282
10.6	Green's Functions	284
	Chapter Notes	288
	References	289
	Problems	289
11	Operators and the Free Response	291
11.1	Introduction	291
11.2	Hilbert Spaces	291
11.3	Expansion Theorems	296
11.4	Linear Operators	297
11.5	Compact Operators	303
11.6	Theoretical Modal Analysis	304
11.7	Eigenvalue Estimates	306
11.8	Enclosure Theorems	308
11.9	Oscillation Theory	310
	Chapter Notes	312
	References	313
	Problems	313
12	Forced Response and Control	315
12.1	Introduction	315
12.2	Response by Modal Analysis	315
12.3	Modal Design Criteria	318
12.4	Combined Dynamical Systems	320
12.5	Passive Control and Design	324
12.6	Distributed Modal Control	326
12.7	Nonmodal Distributed Control	328
12.8	State-space Control Analysis	329
	Chapter Notes	330
	References	331
	Problems	332
13	Approximations of Distributed-parameter Models	333
13.1	Introduction	333
13.2	Modal Truncation	333
13.3	Rayleigh–Ritz–Galerkin Approximations	335
13.4	Finite Element Method	337
13.5	Substructure Analysis	342
13.6	Truncation in the Presence of Control	345
13.7	Impedance Method of Truncation and Control	352
