

Contents

Foreword	xi
Preface	xiii
1 Introduction	1
1.1 Artificial Autonomous Systems	2
1.2 Neural Computation and Analog Integrated Circuits	5
2 Visual Motion Perception	7
2.1 Image Brightness	7
2.2 Correspondence Problem	10
2.3 Optical Flow	12
2.4 Matching Models	13
2.4.1 Explicit matching	13
2.4.2 Implicit matching	14
2.5 Flow Models	16
2.5.1 Global motion	16
2.5.2 Local motion	18
2.5.3 Perceptual bias	22
2.6 Outline for a Visual Motion Perception System	23
2.7 Review of aVLSI Implementations	24
3 Optimization Networks	31
3.1 Associative Memory and Optimization	31
3.2 Constraint Satisfaction Problems	32
3.3 Winner-takes-all Networks	33
3.3.1 Network architecture	37
3.3.2 Global convergence and gain	38
3.4 Resistive Network	42
4 Visual Motion Perception Networks	45
4.1 Model for Optical Flow Estimation	45
4.1.1 Well-posed optimization problem	48
4.1.2 Mechanical equivalent	49

4.1.3	Smoothness and sparse data	51
4.1.4	Probabilistic formulation	52
4.2	Network Architecture	54
4.2.1	Non-stationary optimization	57
4.2.2	Network conductances	58
4.3	Simulation Results for Natural Image Sequences	65
4.4	Passive Non-linear Network Conductances	71
4.5	Extended Recurrent Network Architectures	75
4.5.1	Motion segmentation	77
4.5.2	Attention and motion selection	85
4.6	Remarks	91
5	Analog VLSI Implementation	93
5.1	Implementation Substrate	93
5.2	Phototransduction	95
5.2.1	Logarithmic adaptive photoreceptor	96
5.2.2	Robust brightness constancy constraint	99
5.3	Extraction of the Spatio-temporal Brightness Gradients	100
5.3.1	Temporal derivative circuits	100
5.3.2	Spatial sampling	104
5.4	Single Optical Flow Unit	109
5.4.1	Wide-linear-range multiplier	109
5.4.2	Effective bias conductance	121
5.4.3	Implementation of the smoothness constraint	123
5.5	Layout	124
6	Smooth Optical Flow Chip	127
6.1	Response Characteristics	128
6.1.1	Speed tuning	129
6.1.2	Contrast dependence	133
6.1.3	Spatial frequency tuning	133
6.1.4	Orientation tuning	136
6.2	Intersection-of-constraints Solution	137
6.3	Flow Field Estimation	138
6.4	Device Mismatch	142
6.4.1	Gradient offsets	143
6.4.2	Variations across the array	145
6.5	Processing Speed	147
6.6	Applications	150
6.6.1	Sensor modules for robotic applications	151
6.6.2	Human-machine interface	152
7	Extended Network Implementations	157
7.1	Motion Segmentation Chip	157
7.1.1	Schematics of the motion segmentation pixel	158
7.1.2	Experiments and results	162

- 7.2 Motion Selection Chip 167
 - 7.2.1 Pixel schematics 169
 - 7.2.2 Non-linear diffusion length 171
 - 7.2.3 Experiments and results 171

- 8 Comparison to Human Motion Vision 177**
 - 8.1 Human vs. Chip Perception 177
 - 8.1.1 Contrast-dependent speed perception 178
 - 8.1.2 Bias on perceived direction of motion 179
 - 8.1.3 Perceptual dynamics 182
 - 8.2 Computational Architecture 183
 - 8.3 Remarks 188

- Appendix**

- A Variational Calculus 191**

- B Simulation Methods 195**

- C Transistors and Basic Circuits 197**

- D Process Parameters and Chips Specifications 207**

- References 209**

- Index 223**
