|------------------|---|-----------|
| <b>CHAPTER 1</b> | <b>Structural Design Process</b>  | <b>1</b>  |
| 1.1              | Nature of the Process   | 2         |
| 1.2              | General Comments Regarding Architectural Education                        | 2         |
| 1.3              | Background of the Reader  | 3         |
| 1.4              | Vehicles for Delivering the Concepts                                      | 4         |
| 1.5              | Expectations Regarding the Outcome of the Learning Process                | 5         |
| 1.6              | Types of Structural Action  | 5         |
| 1.7              | Design Guidelines for Spans and Proportions of Common Members and Systems | 24        |
| 1.8              | Flowchart of the Structural Design Process                                | 34        |
| <b>CHAPTER 2</b> | <b>Loads</b>  | <b>35</b> |
| 2.1              | Units of Measure  | 36        |
| 2.2              | Classification of Loads   | 43        |
| 2.2.1            | General Definitions and Load Combinations                                 | 43        |
| 2.2.2            | Dead Loads (Fixed Elements)   | 44        |
| 2.2.3            | Occupancy Loads (Live Loads)  | 49        |
| 2.2.4            | Snow Loads  | 56        |
| 2.2.5            | Wind Loads  | 58        |
| 2.2.5.1          | Static Effects of Wind  | 58        |
| 2.2.5.2          | Design Pressures for Sizing the Main Wind Force Resisting System          | 61        |
| 2.2.5.3          | Design Pressures for Sizing Components and Cladding                       | 65        |
| 2.2.5.4          | Wind Damping  | 67        |
| 2.2.6            | Earthquake Inertial Forces  | 71        |
| 2.2.6.1          | General Inertial Issues   | 71        |
| 2.2.6.2          | Oscillatory Movement Induced by Ground Motion                             | 73        |
| 2.2.6.3          | Ranking Structural Materials with Regard to Earthquake Resistance         | 74        |
| 2.2.7            | Residual and Settlement Stresses  | 76        |
| 2.2.8            | Thermal Stress  | 78        |

|                  |   |            |
|------------------|---|------------|
| <b>CHAPTER 3</b> | <b>Structural Analysis</b>                                  | <b>81</b>  |
| 3.1              | Forces and Moments  | 82         |
| 3.2              | Equilibrium   | 88         |
| 3.3              | Internal Resisting Moments of Spanning Members              | 99         |
| <b>CHAPTER 4</b> | <b>Materials</b>  | <b>103</b> |
| 4.1              | Materials: Basic Properties                                 | 104        |
| 4.2              | Wood Properties   | 118        |
| 4.3              | Steel Properties  | 121        |
| 4.4              | Concrete Properties   | 128        |
| 4.5              | Aluminum Properties   | 129        |
| <b>CHAPTER 5</b> | <b>Axial Members</b>  | <b>133</b> |
| 5.1              | Tension Members   | 134        |
| 5.2              | Columns: Generic Issues                                     | 134        |
| 5.3              | Steel Columns   | 154        |
| 5.4              | Precast Concrete Columns                                    | 172        |
| <b>CHAPTER 6</b> | <b>Beams</b>  | <b>177</b> |
| 6.1              | Generic Beam Issues   | 178        |
| 6.1.1            | Shear, Moment, and Deflection                               | 178        |
| 6.1.2            | Cross-Sectional Properties in Beams                         | 191        |
| 6.2              | Wood Beams  | 204        |
| 6.2.1            | Wood Decking  | 204        |
| 6.2.2            | Solid-Sawn Wood Beams                                       | 209        |
| 6.2.3            | Wood I-Joists and Laminated Veneer Lumber Beams             | 212        |
| 6.2.4            | Glue-Laminated (Glulam) Wood Beams                          | 220        |
| 6.3              | Steel Beams   | 227        |
| 6.3.1            | Corrugated Steel Decking                                    | 227        |
| 6.3.1.1          | Selecting Corrugated Steel Decking for the Roof             | 227        |
| 6.3.2            | Selecting Composite Concrete/Corrugated Steel Floor Decking | 228        |
| 6.3.3            | Sizing Steel Beams from Tables                              | 231        |
| 6.4              | Precast/Prestressed Concrete Beams                          | 242        |
| 6.4.1            | Concrete Double-T's (DTs)                                   | 242        |
| 6.4.2            | Concrete Hollow-Core Planks (HCPs)                          | 247        |
| 6.4.3            | Concrete L-Beams  | 247        |
| 6.5              | Torsion   | 252        |

|                  |  |            |
|------------------|--|------------|
| <b>CHAPTER 7</b> | <b>Trusses</b>   | <b>255</b> |
| 7.1              | Flat-Top Trusses   | 256        |
| 7.1.1            | Joints Method Applied to Systems of Two-Force Members  | 256        |
| 7.1.2            | Joints Method Applied to Four-Bay Truss Using Exploded Diagram   | 258        |
| 7.1.3            | Joints Method Applied to Five-Bay Truss Using Exploded Diagram   | 269        |
| 7.1.4            | Simplified Joints Method Applied to Systems of Two-Force Members                                       | 276        |
| 7.1.5            | Force Patterns in Simple-Span, Parallel-Chord Trusses  | 286        |
| 7.1.6            | Simplified Joints Method Applied to a Modified Warren Truss  | 288        |
| 7.1.7            | Simplified Joints Method Applied to Rectangular Bay Truss  | 292        |
| 7.1.8            | Simplified Joints Method Applied to Trusses with Double Cantilevers                                    | 294        |
| 7.1.9            | Optimal Double Cantilevers in Continuous Parallel-Chord Trusses  | 306        |
| 7.1.10           | Simplified Joints Method Applied to Trusses with Single Cantilevers                                    | 308        |
| 7.1.11           | Optimal Single Cantilevers in Continuous Parallel-Chord Trusses  | 313        |
| 7.1.12           | Modifying Simple-Span Trusses by Moment Connecting to a Stiff Column                                   | 314        |
| 7.1.13           | Concepts for Trusses with Flat-Top Chords  | 316        |
| 7.1.14           | Truss Concepts for Admitting Natural Light   | 329        |
| 7.2              | Sizing Steel Truss Members   | 330        |
| 7.3              | Selecting Standard Steel Trusses   | 339        |
| 7.4              | Economic Implications of Truss Spans   | 374        |
| 7.5              | Trusses Integrated with HVAC Systems   | 379        |
| 7.5.1            | Variations of the Column Grid  | 379        |
| 7.5.2            | Integrating the HVAC Ductwork into the Structural Volume   | 379        |
| <b>CHAPTER 8</b> | <b>Compression Structures</b>  | <b>385</b> |
| 8.1              | Arches and Bow Trusses   | 386        |
| 8.1.1            | Achieving True Arch Action   | 386        |
| 8.1.2            | Reducing Axial Force by Increasing the Depth-to-Span Ratio for an Arch                                 | 401        |
| 8.1.3            | Variations in the Internal Compressive Force in an Arch  | 403        |
| 8.1.4            | Lateral Stabilization of an Arch   | 406        |
| 8.1.5            | Vertical Stabilization of an Arch: Resisting Roll-Through Buckling                                     | 408        |
| 8.1.6            | Funicular Shape under the Primary Load   | 415        |
| 8.1.7            | Broadgate Exchange House (SOM)   | 433        |
| 8.1.8            | Parabolas, Curves, and Arcs of Circles   | 442        |
| 8.1.8.1          | Parabolas  | 442        |
| 8.1.8.2          | Catenaries   | 447        |
| 8.1.9            | Methods of Fabricating Bow Trusses   | 448        |
| 8.1.10           | Analysis of Bow Trusses and Arches in the Form of an Arc of a Circle                                   | 450        |
| 8.1.11           | Shape Responses to Nonuniform Loads  | 466        |
| 8.1.12           | Bracing Responses to Nonuniform Forces on Arches and Bow Trusses                                       | 472        |
| 8.1.13           | Responses to Shifting Live Loads, Wind Loads, Temperature Changes, and Foundation Settlement in Arches | 474        |

|  |  |            |
|--|--|------------|
| 8.1.14                                       | Cantilevered Trusses with Curved Top Chords                                | 477        |
| 8.2  | Vaults   | 480        |
| 8.2.1  | Barrel Vaults  | 480        |
| 8.2.2  | Hyperbolic Paraboloids (Hypars)  | 487        |
| 8.2.3  | Toroidal Vaults  | 495        |
| 8.2.4  | Hyperbolic Paraboloids with Boundary Elements on the Geometric Directrices | 503        |
| 8.2.5  | Cross Vaults   | 510        |
| <b>CHAPTER 9 Tensile Spanning Structures</b> |  | <b>525</b> |
| 9.1  | Suspension Structures  | 526        |
| 9.1.1  | Supporting the Suspension Element  | 534        |
| 9.1.2  | Addressing Shifting Loads  | 538        |
| 9.1.3  | Wind Loading on Suspension Structures                                      | 545        |
| 9.1.4  | Federal Reserve Bank Building  | 550        |
| 9.2  | Cable and Fabric Structures  | 557        |
| 9.2.1  | Cable Trusses of the Virginia Beach Convention Center                      | 557        |
| 9.2.2  | Cable Trusses of the General Motors International Headquarters             | 560        |
| 9.2.3  | Cable Network of the Seattle-Tacoma International Airport                  | 562        |
| 9.2.4  | Cable Networks   | 562        |
| 9.2.5  | Dorton Arena   | 570        |
| 9.2.6  | Fabric Structures  | 573        |
| 9.2.7  | Denver International Airport   | 576        |
| 9.2.8  | Munich Olympic Venues  | 580        |
| 9.2.9  | Funnel Canopy  | 580        |
| 9.2.10                                       | Tensile Models   | 581        |
| <b>CHAPTER 10 Lateral Bracing Systems</b>    |  | <b>587</b> |
| 10.1   | Basic Bracing Systems  | 588        |
| 10.2   | Triangulated Lateral Bracing   | 590        |
| 10.3   | Rigid-Frame Lateral Bracing  | 600        |
| 10.4   | Strategies for Admitting Natural Light to Multistory Buildings             | 613        |
| <b>Index</b>                                 |  | <b>619</b> |
