

Contents

Introduction xxv

Part I • Foundations 1

Chapter 1 • Delphi 7 and Its IDE 3

Editions of Delphi	3
An Overview of the IDE	4
An IDE for Two Libraries	5
Desktop Settings	5
Environment Options	6
About Menus	7
The Environment Options Dialog Box	7
The To-Do List	7
Extended Compiler Messages and Search Results in Delphi 7	9
The Delphi Editor	10
The Code Explorer	11
Browsing in the Editor	12
Class Completion	13
Code Insight	14
More Editor Shortcut Keys	16
Loadable Views	16
The Form Designer	18
The Object Inspector	19
The Object TreeView	22
Secrets of the Component Palette	23
Copying and Pasting Components	24
From Component Templates to Frames	25
Managing Projects	26
Project Options	28
Compiling and Building Projects	30
Exploring a Project's Classes	32
Additional and External Delphi Tools	33
The Files Produced by the System	34
Looking at Source Code Files	38
The Object Repository	39
Debugger Updates in Delphi 7	42
What's Next?	42

Chapter 2 • The Delphi Programming Language 43

Core Language Features	44
Classes and Objects	44
More on Methods	46
Creating Components Dynamically	47

Encapsulation	48
Private, Protected, and Public	48
Encapsulating with Properties	50
Encapsulation and Forms	52
Constructors	54
Destructors and the <i>Free</i> Method	55
Delphi's Object Reference Model	55
Assigning Objects	56
Objects and Memory	58
Inheriting from Existing Types	59
Protected Fields and Encapsulation	60
Inheritance and Type Compatibility	62
Late Binding and Polymorphism	63
Overriding and Redefining Methods	64
Virtual versus Dynamic Methods	65
Abstract Methods	66
Type-Safe Down-Casting	67
Using Interfaces	69
Working with Exceptions	71
Program Flow and the <i>finally</i> Block	72
Exception Classes	73
Logging Errors	75
Class References	76
Creating Components Using Class References	77
What's Next?	79
Chapter 3 • The Run-Time Library	81
The Units of the RTL	81
The System and SysInit Units	84
The SysUtils and SysConst Units	85
The Math Unit	88
The ConvUtils and StdConv Units	91
The DateUtils Unit	91
The StrUtils Unit	91
The Types Unit	93
The Variants and VarUtils Units	94
The DelphiMM and ShareMem Units	95
COM-Related Units	96
Converting Data	96
What About Currency Conversions?	99
Managing Files with SysUtils	102
The <i>TObject</i> Class	104
Showing Class Information	107
What's Next?	108
Chapter 4 • Core Library Classes	109
The RTL Package, VCL, and CLX	110
Traditional Sections of VCL	110

The Structure of CLX	111
VCL-Specific Sections of the Library	112
The <i>TPersistent</i> Class	112
The <i>published</i> Keyword	114
Accessing Properties by Name	115
The <i>TComponent</i> Class	117
Ownership	117
The <i>Name</i> Property	121
Removing Form Fields	121
Hiding Form Fields	122
The Customizable Tag Property	124
Events	124
Events in Delphi	124
Method Pointers	125
Events Are Properties	126
Lists and Container Classes	128
Lists and String Lists	128
Collections	131
Container Classes	131
Type-Safe Containers and Lists	133
Streaming	135
The <i>TStream</i> Class	135
Specific Stream Classes	137
Using File Streams	138
The <i>TReader</i> and <i>TWriter</i> Classes	139
Streams and Persistency	140
Compressing Streams with ZLib	145
Summarizing the Core VCL and BaseCLX Units	146
The Classes Unit	147
Other Core Units	148
What's Next?	148
Chapter 5 • Visual Controls	149
VCL versus VisualCLX	149
Delphi's Dual Library Support	151
Choosing a Visual Library	155
Converting Existing Applications	156
<i>TControl</i> and Derived Classes	158
<i>Parent</i> and Controls	158
Properties Related to Control Size and Position	159
Activation and Visibility Properties	159
Fonts	159
Colors	160
The <i>TWinControl</i> Class (VCL)	161
The <i>TWidgetControl</i> Class (CLX)	161
Opening the Component Toolbox	162
The Text Input Components	162
Selecting Options	165

Lists	167
Ranges	172
Commands	173
Control-Related Techniques	176
Handling the Input Focus	176
Control Anchors	179
Using the Splitter Component	180
Accelerator Keys	181
Using the Fly-by Hints	182
Owner-Draw Controls and Styles	184
ListView and TreeView Controls	188
A Graphical Reference List	188
A Tree of Data	193
Custom Tree Nodes	197
What's Next?	199
Chapter 6 • Building the User Interface	201
Multiple-Page Forms	202
PageControls and TabSheets	202
An Image Viewer with Owner-Draw Tabs	207
The User Interface of a Wizard	210
The ToolBar Control	213
The RichBar Example	214
A Menu and a Combo Box in a Toolbar	215
A Simple Status Bar	217
Themes and Styles	219
CLX Styles	219
Windows XP Themes	220
The ActionList Component	222
Predefined Actions in Delphi	224
Actions in Practice	225
The Toolbar and ActionList of an Editor	229
Toolbar Containers	230
The ControlBar	231
Delphi's Docking Support	234
Docking Toolbars in ControlBars	235
Docking to a PageControl	239
The ActionManager Architecture	241
Building a Simple Demo	242
Least-Recently Used Menu Items	245
Porting an Existing Program	247
Using List Actions	248
What's Next?	250
Chapter 7 • Working with Forms	251
The <i>TForm</i> Class	251
Using Plain Forms	252
The Form Style	254

The Border Style	254
The Border Icons	256
Setting More Window Styles	257
Direct Form Input	259
Supervising Keyboard Input	259
Getting Mouse Input	261
Dragging and Drawing with the Mouse	262
Painting on Forms	265
Unusual Techniques: Alpha Blending, Color Key, and the Animate API	267
Position, Size, Scrolling, and Scaling	268
The Form Position	268
Snapping to the Screen (in Delphi 7)	269
The Size of a Form and Its Client Area	269
Form Constraints	270
Scrolling a Form	270
Scaling Forms	274
Automatic Form Scaling	276
Creating and Closing Forms	277
Form Creation Events	278
Closing a Form	279
Dialog Boxes and Other Secondary Forms	280
Adding a Second Form to a Program	280
Creating Secondary Forms at Run Time	281
Creating a Dialog Box	282
The Dialog Box of the RefList Example	283
A Modeless Dialog Box	285
Predefined Dialog Boxes	287
Windows Common Dialogs	287
A Parade of Message Boxes	289
About Boxes and Splash Screens	289
Building a Splash Screen	289
What's Next?	292

Part II • Delphi Object-Oriented Architectures 293

Chapter 8 • The Architecture of Delphi Applications 295

The <i>Application</i> Object	295
Displaying the Application Window	297
Activating Applications and Forms	298
Tracking Forms with the <i>Screen</i> Object	299
From Events to Threads	302
Event-Driven Programming	302
Windows Message Delivery	303
Background Processing and Multitasking	304
Delphi Multithreading	304
Checking for a Previous Instance of an Application	307
Looking for a Copy of the Main Window	307

Using a Mutex	308
Searching the Window List	308
Handling User-Defined Window Messages	309
Creating MDI Applications	310
MDI in Windows: A Technical Overview	310
Frame and Child Windows in Delphi	311
Building a Complete Window Menu	312
The MdiDemo Example	313
MDI Applications with Different Child Windows	315
Child Forms and Merging Menus	315
The Main Form	316
Subclassing the MDI Client Window	317
Visual Form Inheritance	318
Inheriting from a Base Form	319
Polymorphic Forms	321
Understanding Frames	324
Frames and Pages	326
Multiple Frames with No Pages	328
Base Forms and Interfaces	330
Using a Base Form Class	330
Using Interfaces	333
Delphi's Memory Manager	334
What's Next?	336
Chapter 9 • Writing Delphi Components	337
Extending the Delphi Library	337
Component Packages	338
Rules for Writing Components	339
The Base Component Classes	340
Building Your First Component	340
The Fonts Combo Box	341
Creating a Package	344
Using the Font Combo Box	347
The Component Palette Bitmaps	348
Creating Compound Components	349
Internal Components	349
Publishing Subcomponents	350
External Components	352
Referring to Components with Interfaces	354
A Complex Graphical Component	358
Defining an Enumerated Property	359
Writing the <i>Paint</i> Method	361
Adding <i>TPersistent</i> Properties	362
Defining a Custom Event	364
Registering Property Categories	366
Customizing Windows Controls	368
The Numeric Edit Box	368
The Sound Button	371

Handling Internal Messages: The Active Button	372
Component Messages and Notifications	373
A Dialog Box in a Component	378
Using the Nonvisual Component	381
Collection Properties	381
Defining Custom Actions	385
Writing Property Editors	388
An Editor for the Sound Properties	388
Installing the Property Editor	391
Writing a Component Editor	392
Deriving from the <i>TComponentEditor</i> Class	393
A Component Editor for the ListDialog	393
Registering the Component Editor	395
What's Next?	395
Chapter 10 • Libraries and Packages	397
The Role of DLLs in Windows	397
What Is Dynamic Linking?	397
What Are DLLs For?	398
Rules for Delphi DLL Writers	399
Using Existing DLLs	400
Using a C++ DLL	401
Creating a DLL in Delphi	402
Your First Delphi DLL	403
Calling the Delphi DLL	406
Advanced Features of Delphi DLLs	407
Changing Project and Library Names	407
Calling a DLL Function at Run Time	408
Placing Delphi Forms in a Library	410
Libraries in Memory: Code and Data	411
Sharing Data with Memory-Mapped Files	413
Using Delphi Packages	415
Package Versioning	416
Forms Inside Packages	417
Loading Packages at Run Time	419
Using Interfaces in Packages	420
The Structure of a Package	424
What's Next?	427
Chapter 11 • Modeling and OOP Programming (with ModelMaker)	429
Understanding ModelMaker's Internal Model	430
Modeling and UML	431
Class Diagrams	431
Sequence Diagrams	433
Use Cases and Other Diagrams	434
Non-UML Diagrams	435
Common Diagram Elements	435

Coding Features of ModelMaker	436
Delphi/ModelMaker Integration	437
Managing the Code Model	438
The Unit Code Editor	439
The Method Implementation Code Editor	441
The Difference View	442
The Event Types View	443
Documentation and Macros	444
Documentation versus Comments	444
Working with Macros	445
Refactoring Your Code	446
Applying Design Patterns	447
Code Templates	450
Little-Known Tidbits	452
What's Next?	452
Chapter 12 • From COM to COM+	455
A Short History of OLE and COM	456
Implementing <i>IUnknown</i>	457
Globally Unique Identifiers	458
The Role of Class Factories	460
A First COM Server	460
COM Interfaces and Objects	461
Initializing the COM Object	464
Testing the COM Server	464
Using Interface Properties	465
Calling Virtual Methods	466
Automation	467
Dispatching an Automation Call	468
Writing an Automation Server	470
The Type-Library Editor	470
The Server Code	472
Registering the Automation Server	473
Writing a Client for the Server	474
The Scope of Automation Objects	476
The Server in a Component	477
COM Data Types	478
Using Office Programs	478
Using Compound Documents	479
The Container Component	480
Using the Internal Object	482
Introducing ActiveX Controls	483
ActiveX Controls Versus Delphi Components	484
Using ActiveX Controls in Delphi	485
Writing ActiveX Controls	486
Building an ActiveX Arrow	487
Adding New Properties	488
Adding a Property Page	489

ActiveForms	491
ActiveX in Web Pages	492
Introducing COM+	494
Creating a COM+ Component	494
Transactional Data Modules	497
COM+ Events	497
COM and .NET in Delphi 7	500
What's Next?	502

Part III • Delphi Database-Oriented Architectures 503

Chapter 13 • Delphi's Database Architecture 505

Accessing a Database: dbExpress, Local Data, and Other Alternatives	506
The dbExpress Library	506
The Borland Database Engine	507
InterBase Express	507
MyBase and the ClientDataSet Component	508
dbGo for ADO	508
Custom Dataset Components	509
MyBase: Stand-alone ClientDataSet	509
Connecting to an Existing Local Table	509
From the Midas DLL to the MidasLib Unit	510
XML and CDS Formats	511
Defining a New Local Table	511
Indexing	512
Filtering	513
Locating Records	514
Using Data-Aware Controls	515
Data in a Grid	516
DBNavigator and Dataset Actions	516
Text-Based Data-Aware Controls	516
List-Based Data-Aware Controls	517
Using Lookup Controls	518
Graphical Data-Aware Controls	520
The DataSet Component	520
The Status of a Dataset	524
The Fields of a Dataset	525
Using Field Objects	527
A Hierarchy of Field Classes	529
Adding a Calculated Field	530
Lookup Fields	533
Handling Null Values with Field Events	535
Navigating a Dataset	536
The Total of a Table Column	537
Using Bookmarks	538
Editing a Table Column	539
Customizing a Database Grid	540
Painting a DBGrid	540

A Grid Allowing Multiple Selection	542
Dragging to a Grid	544
Database Applications with Standard Controls	544
Mimicking Delphi Data-Aware Controls	545
Sending Requests to the Database	547
Grouping and Aggregates	549
Grouping	549
Defining Aggregates	550
Master/Detail Structures	552
Master/Detail with ClientDataSets	552
Handling Database Errors	553
What's Next?	554
Chapter 14 • Client/Server with dbExpress	555
The Client/Server Architecture	555
Elements of Database Design	557
Entities and Relations	557
From Primary Keys to OIDs	558
More Constraints	560
Unidirectional Cursors	560
Introducing InterBase	561
Using IBConsole	562
InterBase Server-Side Programming	564
The dbExpress Library	566
Working with Unidirectional Cursors	566
Platforms and Databases	567
Driver Versioning Troubles and Embedded Units	568
The dbExpress Components	569
The SQLConnection Component	569
The dbExpress Dataset Components	572
The SQLMonitor Component	574
A Few dbExpress Demos	574
Using a Single Component or Many Components	575
Accessing Database Metadata with <i>SetSchemaInfo</i>	578
A Parametric Query	579
When One-Way Is Enough: Printing Data	581
The Packets and the Cache	584
Manipulating Updates	584
Updating the Data	586
Using Transactions	589
Using InterBase Express	591
IBX Dataset Components	592
IBX Administrative Components	593
Building an IBX Example	593
Building a Live Query	594
Monitoring InterBase Express	598
Getting More System Data	599
Real-World Blocks	600
Generators and IDs	600

Case-Insensitive Searches	602
Handling Locations and People	603
Building a User Interface	605
Booking Classes	608
Building a Lookup Dialog	611
Adding a Free Query Form	613
What's Next?	614
Chapter 15 • Working with ADO	615
Microsoft Data Access Components (MDAC)	616
OLE DB Providers	617
Using dbGo Components	618
A Practical Example	619
The ADOConnection Component	621
Data Link Files	621
Dynamic Properties	622
Getting Schema Information	622
Using the Jet Engine	624
Paradox through Jet	624
Excel through Jet	625
Text Files through Jet	626
Importing and Exporting	628
Working with Cursors	629
Cursor Location	629
Cursor Type	630
Ask and Ye Shall Not Receive	631
No Record Count	631
Client Indexes	632
Cloning	633
Transaction Processing	634
Nested Transactions	634
ADOConnection Attributes	635
Lock Types	635
Updating the Data	636
Batch Updates	638
Optimistic Locking	639
Resolving Update Conflicts	641
Disconnected Recordsets	642
Connection Pooling	643
Persistent Recordsets	644
The Briefcase Model	645
A Word on ADO.NET	645
What's Next?	646
Chapter 16 • Multitier DataSnap Applications	647
One, Two, Three Levels in Delphi's History	647
The Technical Foundation of DataSnap	649
The <i>IAppServer</i> Interface	649

The Connection Protocol	650
Providing Data Packets	651
Delphi Support Components (Client-Side)	652
Delphi Support Components (Server-Side)	653
Building a Sample Application	653
The First Application Server	653
The First Thin Client	655
Adding Constraints to the Server	656
Field and Dataset Constraints	657
Including Field Properties	658
Field and Table Events	658
Adding Features to the Client	659
The Update Sequence	660
Refreshing Data	660
Advanced DataSnap Features	662
Parametric Queries	663
Custom Method Calls	663
Master/Detail Relations	664
Using the Connection Broker	666
More Provider Options	666
The Simple Object Broker	667
Object Pooling	667
Customizing the Data Packets	667
What's Next?	668
Chapter 17 • Writing Database Components	669
The Data Link	669
The <i>TDataLink</i> Class	670
Derived Data Link Classes	670
Writing Field-Oriented Data-Aware Controls	671
A Read-Only ProgressBar	671
A Read-Write TrackBar	674
Creating Custom Data Links	678
A Record Viewer Component	678
Customizing the DBGrid Component	683
Building Custom Datasets	686
The Definition of the Classes	687
Section I: Initialization, Opening, and Closing	690
Section II: Movement and Bookmark Management	695
Section III: Record Buffers and Field Management	698
Section IV: From Buffers to Fields	702
Testing the Stream-Based DataSet	703
A Directory in a Dataset	705
A List as a Dataset	705
Directory Data	706
A Dataset of Objects	710
What's Next?	713

Chapter 18 • Reporting with Rave	715
Introducing Rave	716
Rave: The Report Authoring Visual Environment	716
Using the RvProject Component	719
Rendering Formats	720
Data Connections	721
Components of the Rave Designer	722
Basic Components	723
Data Access Objects	725
Regions and Bands	726
Data-Aware Components	728
Advanced Rave	730
Master/Detail Reports	730
Scripting Reports	731
Mirroring	732
Calculations to the Max	733
What's Next?	734
 Part IV • Delphi, the Internet, and a .NET Preview	 735
 Chapter 19 • Internet Programming: Sockets and Indy	 737
Building Socket Applications	737
Foundations of Socket Programming	739
Using Indy's TCP Components	741
Sending Database Data over a Socket Connection	744
Sending and Receiving Mail	748
Mail In and Out	748
Working with HTTP	750
Grabbing HTTP Content	751
Browsing on Your Own	756
A Simple HTTP Server	757
Generating HTML	758
Delphi's HTML Producer Components	759
Producing HTML Pages	759
Producing Pages of Data	761
Producing HTML Tables	762
Using Style Sheets	764
Dynamic Pages from a Custom Server	764
What's Next?	766
 Chapter 20 • Web Programming with WebBroker and WebSnap	 767
Dynamic Web Pages	768
An Overview of CGI	768
Using Dynamic Libraries	769
Delphi's WebBroker Technology	770
Debugging with the Web App Debugger	772
Building a Multipurpose WebModule	774

Dynamic Database Reporting	776
Queries and Forms	777
Working with Apache	781
Practical Examples	782
A Graphical Web Hit Counter	782
Searching with a Web Search Engine	785
WebSnap	786
Managing Multiple Pages	789
Server-Side Scripts	791
Adapters	794
Locating Files	798
WebSnap and Databases	798
A WebSnap Data Module	798
The DataSetAdapter	799
Editing the Data in a Form	801
Master/Detail in WebSnap	803
Sessions, Users, and Permissions	805
Using Sessions	805
Requesting Login	807
What's Next?	808
Chapter 21 • Web Programming with IntraWeb	809
Introducing IntraWeb	810
From Websites to Web Applications	810
A First Look Behind the Scenes	813
IntraWeb Architectures	815
Building IntraWeb Applications	815
Writing Multipage Applications	818
Sessions Management	821
Integrating with WebBroker (and WebSnap)	823
Controlling the Layout	824
Web Database Applications	825
Linking to Details	827
Moving Data to the Client Side	831
What's Next?	832
Chapter 22 • Using XML Technologies	833
Introducing XML	833
Core XML Syntax	834
Well-Formed XML	835
Working with XML	836
Managing XML Documents in Delphi	837
Programming with the DOM	838
An XML Document in a TreeView	839
Creating Documents Using the DOM	842
XML Data-Binding Interfaces	846
Using the SAX API	850
Mapping XML with Transformations	854

XML and Internet Express	858
The XMLBroker Component	858
JavaScript Support	859
Building an Example	860
Using XSLT	864
Using XPath	864
XSLT in Practice	865
XSLT with WebSnap	866
Direct XSL Transformations with the DOM	868
Processing Large XML Documents	869
From a ClientDataSet to an XML Document	870
From an XML Document to a ClientDataSet	871
What's Next?	873
Chapter 23 • Web Services and SOAP	875
Web Services	875
SOAP and WSDL	876
BabelFish Translations	876
Building Web Services	879
A Currency Conversion Web Service	880
Asking for Database Data	883
Debugging the SOAP Headers	887
Exposing an Existing Class as a Web Service	888
DataSnap over SOAP	889
Building the DataSnap SOAP Server	889
Building the DataSnap SOAP Client	891
SOAP versus Other DataSnap Connections	891
Handling Attachments	892
Supporting UDDI	894
What Is UDDI?	894
UDDI in Delphi 7	895
What's Next?	898
Chapter 24 • The Microsoft .NET Architecture from the Delphi Perspective ...	899
Installing the Delphi for .NET Preview	900
Testing the Installation	901
Microsoft's .NET Platform	903
The Common Language Infrastructure (CLI)	903
The Common Language Runtime (CLR)	905
Assemblies	906
The Intermediate Language	907
Managed and Safe Code	908
The Common Type System	909
Garbage Collection	911
Garbage Collection and Efficiency	915
Deployment and Versioning	916
What's Next?	918

Chapter 25 • Delphi for .NET Preview: The Language and the RTL	919
Deprecated Delphi Language Features	920
Deprecated Types	920
Strings and Other Types	920
Deprecated Code Features	921
New Delphi Language Features	922
Unit Namespaces	922
Extended Identifiers	924
The <i>final</i> and <i>sealed</i> Keywords	924
New Visibility and Access Specifiers	925
Class Static Members	925
Nested Types	926
Multicast Events	926
Custom Attributes	927
Class Helpers	929
The Run-time Library and VCL	930
Class Helpers for the RTL	930
The VCL	931
Looking into the VCL.NET Source	931
Further VCL Examples	933
Using Microsoft Libraries	934
ASP.NET with the Delphi Language	940
What's Next?	943
Appendix A • Extra Delphi Tools by the Author	945
CanTools Wizards	945
VclToClx Conversion Program	947
Object Debugger	948
Memory Snap	948
Licensing and Contributions	949
Appendix B • Extra Delphi Tools from Other Sources	951
Delphi Preinstalled Open-Source Components	951
Other Open-Source Projects	951
Project JEDI	952
GExperts	952
The Delphree Site	952
DUnit	952
Appendix C • Free Companion Books on Delphi	953
Essential Pascal	953
Essential Delphi	954
Delphi Power Book	954
Index	955
