Foreword to the Revised Edition	ix
Foreword to the Original Edition	xi
Preface	xiii
Acknowledgments	xv
1. Before You Breed	1
What You Should Know Before Breeding Dogs • The Breed Standard • Genetics • Structure and Locomotion • A Good Eye and a Gentle Hand • What You Should Have Before Breeding Dogs • Proper Facilities • Seaward Kennels (Newfoundlands)	
2. The Mechanics of Heredity	11
A Monk Counts His Peas • Dominant and Recessive “Particles” • Mendel’s Law of Segregation • Red and White Equals Pink • The Cells—Sperm and Ovum • Chromosomes and Genes • Four Important Words • Homozygous and Heterozygous • Genotype and Phenotype • Applying Mendel’s Laws to the Breeding of Dogs • Homozygosity Is the Breeder’s Key to Genetic Purity • A Single Pair of Genes • The Back-Cross • Two Pairs of Genes and the Law of Independent Assortment • Three Pairs of Heterozygous Genes or a Trihybrid • Facing Reality • Returning to Mendel • Linked Inheritance • Incomplete Dominant Genes • Modifying Genes • Lethal Genes • Sex-Linked Genes • Atavism or Reversion • Mutations • Modern Advances in Genetics • Genetically Dominant and Recessive Traits	

3.	Pedigrees and Breeding Systems	31
	What Pedigrees Tell the Breeder • An Open Pedigree • A Genetic Card Game • Inbreeding • Brother-Sister Inbreeding • Father-Daughter or Dam-Son Inbreeding • Half-Brother—Half-Sister Inbreeding • The Pros and Cons of Inbreeding • Linebreeding • Outbreeding • Outcrossing • Non-Genetic Breeding Systems • Like-to-Like • Divergent Breeding • The Nick • Conclusion	
4.	Pedigrees and Progeny	49
	Which Breeding System Is Best? • A Few Breeding Tips Based Solely on Experience • Interpreting Pedigrees • Jay-Mac Miniature Pinschers • Ch. Cede Higgins • Ch. Blairsville Royal Seal • Ch. Mayfair Barban Verikoko • Redway Silky Terriers • Alekai Standard Poodles • Salilyn English Springer Spaniels • Potala Lhasa Apsos • Hetherbull Bulldogs • St. Aubrey-Elsdon Pekingese • Vin-Melca Norwegian Elkhounds	
5.	The Mating Game	89
	Evaluating a Brood Bitch • Getting a Foot in the Door • Organs of Reproduction • The Bitch • The Normal Heat or Estrus Cycle • Ovulation • Vaginal Smears • Other Indicators of Ovulation • Best Time to Mate • Induced Abortion • Before Breeding Your Bitch • Testing for Canine Brucellosis • Shipping • Care of the Bitch After Breeding • The Stud Dog • Responsibilities of the Owner • Selecting a Stud Dog • Managing a Stud Dog • Reproductive Organs of the Male • Cryptorchids • The Actual Mating • What Happens During the Mating? • Breeding Etiquette • Pick of Litter • The Importance of Integrity • Artificial Insemination • Infertility • Lack of Exercise • Proper Diet Is Important • Incorrect Timing • Age Is a Factor • Strictures • Change of Environment • Resorption • Psychological Impotence • Overaggression • Hormonal Infertility • Infections • Overuse of Drugs	
6.	Pregnancy and Whelping	119
	Signs of Pregnancy • Vaginal Discharge • Personality Changes • Abdominal Movement • Radiography • Abdominal Palpation • Resorption • Pseudo or False Pregnancies • Nutritional Requirements and Exercise for the In-Whelp Bitch • Normal Whelpings • The Whelping Room • Whelping Boxes or Pens • Whelping Rings for Small Breeds • Preparing the Bitch for Motherhood • Temperature Is the Tip-Off • Records Are Important • Temperature Patterns • Temperature Chart A • Temperature Chart B • Temperature Chart C • Whelping Equipment • Stages of Parturition • First Stage of Parturition • Second and Third Stages of Parturition • Various Ways Puppies Can Be Born • Head-First Presentation • Posterior Presentation • Breech Birth • Posterior Presentation and Upside Down • Posterior Presentation • Length of Whelping Time • Distressed Puppies • Auxiliary Oxygen • Artificial Respiration • Dystocia or Problem Whelping • Uterine Inertia • Episiotomy • Prolapse of the Uterus • Caesarean Sections • Care of the Dam After Whelping • Post-Parturition Complications • Eclampsia • Metritis • Mastitis • Toxic Milk	

7. The Critical First Three Weeks	155
The Neonatal Period • Continuous Crying • Colic • The Sick Puppy • Warmth Is Important • Dam Culling • The Cold Puppy • The First 48 Hours Are Critical • Hypo- and Hyperglycemia • Using Glucose to Save Puppies • Bottle Feeding • Intubation or Tube Feeding • How Much Formula to Feed • Formula Chart • Orphan Puppies • Foster Mothers • Hand-Rearing Orphan Pups • Nail Trimming • Removal of Dew Claws and Tail Docking • Neonatal Mortality • Chondrodystrophia Fetalis • Congenital Hydrocephalus • Cleft Palate • Harelip • Diaphragmatic Hernias • Non-Inherited Physiological Neonatal Deaths • Alveolar Dysplasia • Primary Atelactasis • Parasitical Neonatal Deaths • Hookworm • Roundworm • Viral and Bacterial Neonatal Deaths • Herpesvirus • Puppy Septicemia • Umbilical Infections • Fading-Puppy Syndrome	
8. Puppy Rearing and Socialization	177
Weaning the Puppies • Teething • Immunizations • Rabies • Gastroenteritis • Internal Parasites and Worming • Heartworm • Ear Cropping • House Training • Congenital Abnormalities • Elongated Soft Palate • Collapsed Trachea • Dilated Esophagus • Pyloric Stenosis • Entropion • Congenital Deafness • Progressive Retinal Atrophy (PRA) • Canine Hip Dysplasia (CHD) • Subluxed Patellas or Knee Caps • Legg-Perthes • Socialization • The Critical Periods • The First Stage (Birth to 3 Weeks) • The Second Stage (3 to 5 Weeks) • The Third Stage (5 to 7 Weeks) • The Fourth Stage (7th Week or from 49 to 56 Days) • The Fifth Stage (8 to 10 Weeks) • The Sixth Stage (10 to 16 Weeks)	
9. Evaluating Puppies and Young Adults	201
To Sell or to Keep? • Culling a Litter • Kennel Blindness • The Importance of Keeping Records • A Breeder's Responsibilities • Screening the Buyer • A Breeder's Responsibility to the Pet Buyer • A Visit to the Veterinarian • Your First Show Puppy • You Are Boss • Good Health Is Important • Attending Dog Shows • Doing It Yourself • Handling Classes • Match Shows
