Foreword	xi
Series Preface	xiii
Preface	xv
List of Abbreviations	xvii
1 The Use of Timber in the Twenty-first Century	1
1.1 Introduction	1
1.2 Nonrenewables: a Finite and Exhaustible Resource	2
1.3 Renewable Materials	4
1.4 The Global Timber Resource	7
1.5 Timber Production	10
1.6 Wood Preservation	11
1.7 Preservative-treated Wood and Legislation	14
1.8 Competition from Nonrenewable Materials	16
1.9 The Need for Wood Modification	17
1.10 Conclusions	17
2 Modifying the Properties of Wood	19
2.1 Introduction	19
2.2 Wood Properties and Wood Modification	19
2.3 Wood Modification Methods	21
2.4 The Cell Wall of Wood	23
2.5 The Chemical Constituents of Wood	25
2.6 The Wood–Water Relationship	30
2.7 The Mechanical Properties of Modified Wood	37
2.8 Modified Wood and Biological Degradation	39
2.9 Wood and Weathering	43
2.10 Proof of Bonding	43
2.11 Conclusions	44

3	Chemical Modification of Wood (I): Acetic Anhydride Modification	45
3.1	Introduction	45
3.2	Reaction Protocols	46
3.3	Cell Wall Reactivity	52
3.4	Analysis of Anhydride-modified Wood	55
3.5	Dimensional Stability	56
3.6	Mechanical Properties	58
3.7	Microbiological Degradation	60
3.8	Biological Degradation by Insects and Marine Organisms	69
3.9	Moisture Relationships of Anhydride-modified Wood	70
3.10	Composites Utilizing Acetic Anhydride Modified Wood	72
3.11	Conclusions	76
4	Chemical Modification of Wood (II): Reaction with Other Chemicals	77
4.1	Introduction	77
4.2	Reaction of Wood with Other Noncyclic Anhydrides	77
4.3	Reaction of Wood with Cyclic Anhydrides	79
4.4	Acetylation Using Ketene Gas	83
4.5	Carboxylic Acid Modification	84
4.6	Acid Chloride Modification	85
4.7	Isocyanate Modification	85
4.8	Epoxide Modification	90
4.9	Alkyl Halide Modification	93
4.10	Aldehyde Modification	93
4.11	Cyanoethylation	96
4.12	Beta-Propiolactone	96
4.13	Quinone Methides	97
4.14	Conclusions	97
5	Thermal Modification of Wood	99
5.1	Introduction	99
5.2	Process Variables	100
5.3	Chemical Changes in Wood due to Thermal Modification	102
5.4	Physical Changes in Wood due to Thermal Modification	110
5.5	Biological Properties of Thermally Modified Wood	123
5.6	Compressed Wood	125
5.7	Oil Heat-treatments	126
5.8	Conclusions	126
6	Surface Modification	129
6.1	Introduction	129
6.2	Surface Chemical Modification for UV Stability	129
6.3	Modification to Render the Wood Surface Hydrophobic	133
6.4	Surface Chemical Modification for Bonding	133
6.5	Enzymatic Modification	143

6.6	Corona or Plasma Discharge	145
6.7	Conclusions	147
7	Impregnation Modification	149
7.1	Introduction	149
7.2	Resin Treatments	150
7.3	Impregnations using Silicon-containing Compounds	162
7.4	Other Inorganic Cell Wall Precipitation Treatments	170
7.5	Cell Wall Impregnation with Monomers	170
7.6	Cell Wall Impregnation with Polymers	171
7.7	Conclusions	173
8	Commercialization of Wood Modification	175
8.1	Introduction	175
8.2	Thermal Modification	175
8.3	Oil Heat Modification/Treatments	182
8.4	Acetylation	183
8.5	Impregnation Modification	188
8.6	Conclusions	190
9	Wood Modification: Environmental Considerations and Future Developments	191
9.1	Introduction	191
9.2	Principles of the Determination of Environmental Impact	192
9.3	Methods of Determining Environmental Impacts	193
9.4	The Environmental Impact of Wood Modification	194
9.5	Industrial Ecology and Wood Modification	194
9.6	The Future of Wood Modification	198
	References	201
	Index	233
