

CONTENTS

List of Figures	xi
List of Tables	xiii
Preface	xv
1 Introduction	1
2 Overview of Probability Theory	5
2.1 Probability Spaces and Information Structures	6
2.2 Random Variables, Moments and Transforms	11
2.3 Multivariate Distributions	20
2.4 Conditional Probability and Conditional Distributions	24
2.5 Conditional Expectation	34
2.6 The Central Limit Theorem	43
3 Discrete-Time Stochastic Processes	45
3.1 Stochastic Processes and Information Structures	45
	vii

3.2	Random Walks	47
3.3	Discrete-Time Markov Chains	55
3.4	Martingales and Change of Probability Measure	60
3.5	Stopping Times	66
3.6	Option Pricing with Binomial Models	72
3.7	Binomial Interest Rate Models	84
4	Continuous-Time Stochastic Processes	97
4.1	General Description of Continuous-Time Stochastic Processes	97
4.2	Brownian Motion	98
4.3	The Reflection Principle and Barrier Hitting Probabilities	104
4.4	The Poisson Process and Compound Poisson Process	112
4.5	Martingales	117
4.6	Stopping Times and the Optional Sampling Theorem	122
5	Stochastic Calculus: Basic Topics	131
5.1	Stochastic (Ito) Integration	131
5.2	Stochastic Differential Equations	141
5.3	One-Dimensional Ito's Lemma	144
5.4	Continuous-Time Interest Rate Models	148
5.5	The Black-Scholes Model and Option Pricing Formula	155
5.6	The Stochastic Version of Integration by Parts	162
5.7	Exponential Martingales	165
5.8	The Martingale Representation Theorem	168
6	Stochastic Calculus: Advanced Topics	173
6.1	The Feynman-Kac Formula	174
6.2	The Black-Scholes Partial Differential Equation	175
6.3	The Girsanov Theorem	177
6.4	The Forward Risk Adjusted Measure and Bond Option Pricing	181
6.5	Barrier Hitting Probabilities Revisited	187
6.6	Two-Dimensional Stochastic Differential Equations	191
7	Applications in Insurance	197
7.1	Deferred Variable Annuities and Equity-Indexed Annuities	198
7.2	Guaranteed Annuity Options	206
7.3	Universal Life	210

References	217
Topic Index	221

LIST OF FIGURES

2.1.	The price of a stock over a two-day period.	11
2.2.	The probability tree of the stock price over a two-day period.	26
2.3.	The expectation tree of the stock price over a two-day period.	39
3.1.	The tree of a standard random walk.	49
3.2.	The binomial model of the stock price.	53
3.3.	The binomial tree of the stock price.	55
3.4.	The returns of a stock and a bond.	73
3.5.	The payoff function of a call.	74
3.6.	The payoff function of a put.	74
3.7.	The payoff function of a strangle.	77
3.8.	Treasury yield curve, Treasury zero curve, and Treasury forward rate curve based on the quotes in Table 3.1.	88
3.9.	Constructing a short rate tree: step one.	92

3.10.	Constructing a short rate tree: step two.	93
3.11.	The complete short rate tree.	93
4.1.	A sample path of standard Brownian motion ($\mu = 0$ and $\sigma = 1$).	103
4.2.	A sample path of Brownian motion with $\mu = 1$ and $\sigma = 1$.	104
4.3.	A sample path of Brownian motion with $\mu = -1$ and $\sigma = 1$.	105
4.4.	A sample path of Brownian motion with $\mu = 0$ and $\sigma = 2$.	106
4.5.	A sample path of Brownian motion with $\mu = 0$ and $\sigma = 0.5$.	107
4.6.	A path of standard Brownian motion reflected after hitting.	109
4.7.	A path of standard Brownian motion reflected before hitting.	110
4.8.	A sample path of a compound Poisson process.	114
4.9.	A sample path of the shifted Poisson process $\{X_\tau(t)\}$.	116

LIST OF TABLES

3.1.	A sample of quotes on U.S. Treasuries.	86
3.2.	The market term structure.	91
5.1.	The product rules in stochastic calculus.	146
