Preface to the third edition	xi
Preface to the second edition	xiii
Preface to the first edition	xv
1 Introduction to protective relaying	1
1.1 What is relaying?	1
1.2 Power system structural considerations	2
1.3 Power system bus configurations	4
1.4 The nature of relaying	7
1.5 Elements of a protection system	13
1.6 International practices	17
1.7 Summary	18
Problems	18
References	22
2 Relay operating principles	23
2.1 Introduction	23
2.2 Detection of faults	24
2.3 Relay designs	28
2.4 Electromechanical relays	29
2.5 Solid-state relays	37
2.6 Computer relays	41
2.7 Other relay design considerations	42
2.8 Control circuits, a beginning	44
2.9 Summary	45
Problems	45
References	47
3 Current and voltage transformers	49
3.1 Introduction	49
3.2 Steady-state performance of current transformers	49
3.3 Transient performance of current transformers	56
3.4 Special connections of current transformers	59
3.5 Linear couplers and electronic current transformers	62

3.6	Voltage transformers	63
3.7	Coupling capacitor voltage transformers	64
3.8	Transient performance of CCVTs	67
3.9	Electronic voltage transformers	70
3.10	Summary	70
	Problems	71
	References	72
4	Nonpilot overcurrent protection of transmission lines	75
4.1	Introduction	75
4.2	Fuses, sectionalizers, reclosers	77
4.3	Inverse, time-delay overcurrent relays	80
4.4	Instantaneous overcurrent relays	88
4.5	Directional overcurrent relays	90
4.6	Polarizing	92
4.7	Summary	96
	Problems	96
	References	99
5	Nonpilot distance protection of transmission lines	101
5.1	Introduction	101
5.2	Stepped distance protection	101
5.3	$R-X$ diagram	104
5.4	Three-phase distance relays	108
5.5	Distance relay types	117
5.6	Relay operation with zero voltage	117
5.7	Polyphase relays	118
5.8	Relays for multi-terminal lines	119
5.9	Protection of parallel lines	121
5.10	Effect of transmission line compensation devices	125
5.11	Loadability of relays	127
5.12	Summary	128
	Problems	129
	References	131
6	Pilot protection of transmission lines	133
6.1	Introduction	133
6.2	Communication channels	134
6.3	Tripping versus blocking	138
6.4	Directional comparison blocking	138
6.5	Directional comparison unblocking	142
6.6	Underreaching transfer trip	142
6.7	Permissive overreaching transfer trip	146
6.8	Permissive underreaching transfer trip	147
6.9	Phase comparison relaying	148
6.10	Current differential	151
6.11	Pilot wire relaying	151
6.12	Multi-terminal lines	153

6.13	Summary	155
	Problems	156
	References	157
7	Rotating machinery protection	159
7.1	Introduction	159
7.2	Stator faults	160
7.3	Rotor faults	174
7.4	Unbalanced currents	174
7.5	Overload	175
7.6	Overspeed	177
7.7	Abnormal voltages and frequencies	177
7.8	Loss of excitation	179
7.9	Loss of synchronism	180
7.10	Power plant auxiliary system	180
7.11	Winding connections	185
7.12	Startup and motoring	187
7.13	Inadvertent energization	189
7.14	Torsional vibration	189
7.15	Sequential tripping	190
7.16	Summary	190
	Problems	191
	References	193
8	Transformer protection	195
8.1	Introduction	195
8.2	Overcurrent protection	196
8.3	Percentage differential protection	198
8.4	Causes of false differential currents	201
8.5	Supervised differential relays	206
8.6	Three-phase transformer protection	208
8.7	Volts-per-hertz protection	212
8.8	Nonelectrical protection	213
8.9	Protection systems for transformers	214
8.10	Summary	220
	Problems	221
	References	223
9	Bus, reactor and capacitor protection	225
9.1	Introduction to bus protection	225
9.2	Overcurrent relays	226
9.3	Percentage differential relays	226
9.4	High-impedance voltage relays	227
9.5	Moderately high impedance relay	229
9.6	Linear couplers	229
9.7	Directional comparison	230
9.8	Partial differential protection	231
9.9	Introduction to shunt reactor protection	233

9.10	Dry-type reactors	233
9.11	Oil-immersed reactors	234
9.12	Introduction to shunt capacitor bank protection	235
9.13	Static var compensator protection	237
9.14	Static compensator	239
9.15	Summary	240
	Problems	240
	References	241
10	Power system phenomena and relaying considerations	243
10.1	Introduction	243
10.2	Power system stability	243
10.3	Steady-state stability	244
10.4	Transient stability	249
10.5	Voltage stability	253
10.6	Dynamics of system frequency	254
10.7	Series capacitors and reactors	258
10.8	Independent power producers	258
10.9	Islanding	259
10.10	Blackouts and restoration	259
10.11	Summary	262
	Problems	262
	References	262
11	Relaying for system performance	265
11.1	Introduction	265
11.2	System integrity protection schemes	265
11.3	Underfrequency load shedding	266
11.4	Undervoltage load shedding	268
11.5	Out-of-step relaying	268
11.6	Loss-of-field relaying	272
11.7	Adaptive relaying	273
11.8	Hidden failures	275
11.9	Distance relay polarizing	276
11.10	Summary	278
	Problems	279
	References	279
12	Switching schemes and procedures	281
12.1	Introduction	281
12.2	Relay testing	281
12.3	Computer programs for relay setting	283
12.4	Breaker failure relaying	284
12.5	Reclosing	286
12.6	Single-phase operation	287
12.7	Summary	287
	References	288

13	Monitoring performance of power systems	289
13.1	Introduction	289
13.2	Oscillograph analysis	290
13.3	Synchronized sampling	297
13.4	Fault location	299
13.5	Alarms	303
13.6	COMTRADE and SYNCHROPHASOR standards	305
13.7	Summary	306
	Problems	306
	References	308
	Appendix A: IEEE device numbers and functions	311
	Appendix B: Symmetrical components	313
	Appendix C: Power equipment parameters	317
	Appendix D: Inverse time overcurrent relay characteristics	321
	Index	325
