

Contents at a Glance

Introduction	1
Part I: Getting Cozy with Numbers, Atoms, and Elements	7
Chapter 1: Noting Numbers Scientifically	9
Chapter 2: Using and Converting Units	21
Chapter 3: Organizing Matter into Atoms and Phases	33
Chapter 4: Surveying the Periodic Table of the Elements	49
Part II: Making and Remaking Compounds	63
Chapter 5: Building Bonds	65
Chapter 6: Naming Compounds	85
Chapter 7: Managing the Mighty Mole	97
Chapter 8: Getting a Grip on Chemical Equations	111
Chapter 9: Putting Stoichiometry to Work	125
Part III: Examining Changes in Terms of Energy	141
Chapter 10: Understanding States in Terms of Energy	143
Chapter 11: Obeying Gas Laws	151
Chapter 12: Dissolving into Solutions	163
Chapter 13: Playing Hot and Cold: Colligative Properties	175
Chapter 14: Exploring Rate and Equilibrium	187
Chapter 15: Warming Up to Thermochemistry	201
Part IV: Swapping Charges	213
Chapter 16: Giving Acids and Bases the Litmus Test	215
Chapter 17: Achieving Neutrality with Equivalents, Titration, and Buffers	227
Chapter 18: Accounting for Electrons in Redox	239
Chapter 19: Galvanizing Yourself into Electrochemistry	249
Chapter 20: Doing Chemistry with Atomic Nuclei	263
Part V: Going Organic	271
Chapter 21: Making Chains with Carbon	273
Chapter 22: Seeing Isomers in Stereo	289
Chapter 23: Moving through the Functional Groups	301
Part VI: The Part of Tens	319
Chapter 24: Ten Formulas to Tattoo on Your Brain	321
Chapter 25: Ten Annoying Exceptions to Chemistry Rules	327
Index	333

Table of Contents

<i>Introduction</i>	1
About This Book	1
Conventions Used in This Book.....	1
Foolish Assumptions	2
How This Book Is Organized	2
Part I: Getting Cozy with Numbers, Atoms, and Elements	2
Part II: Making and Remaking Compounds	2
Part III: Examining Changes in Terms of Energy	3
Part IV: Swapping Charges	3
Part V: Going Organic	3
Part VI: The Part of Tens	3
Icons Used in This Book	4
Where to Go from Here	4
<i>Part I: Getting Cozy with Numbers, Atoms, and Elements</i>	7
Chapter 1: Noting Numbers Scientifically	9
Using Exponential and Scientific Notation to Report Measurements.....	9
Multiplying and Dividing in Scientific Notation	11
Using Exponential Notation to Add and Subtract	12
Distinguishing between Accuracy and Precision	14
Expressing Precision with Significant Figures	15
Doing Arithmetic with Significant Figures	17
Answers to Questions on Noting Numbers Scientifically.....	19
Chapter 2: Using and Converting Units	21
Familiarizing Yourself with Base Units and Metric System Prefixes	21
Building Derived Units from Base Units	23
Converting between Units: The Conversion Factor	24
Letting the Units Guide You	28
Answers to Questions on Using and Converting Units.....	31
Chapter 3: Organizing Matter into Atoms and Phases	33
Building Atoms from Subatomic Particles	33
J. J. Thomson: Cooking up the “plum pudding” model.....	35
Ernest Rutherford: Shooting at gold.....	35
Niels Bohr: Comparing the atom to the solar system	36
Deciphering Chemical Symbols: Atomic and Mass Numbers	37
Accounting for Isotopes Using Atomic Masses	40
Moving between the Phases of Solids, Liquids, and Gases	42
Answers to Questions on Organizing Matter	46
Chapter 4: Surveying the Periodic Table of the Elements	49
Reading Periods and Groups in the Periodic Table	49
Predicting Properties from Periodic and Group Trends.....	52

Seeking Stability with Valence Electrons by Forming Ions.....	54
Putting Electrons in Their Places: Electron Configurations.....	56
Measuring the Amount of Energy (Or Light) an Excited Electron Emits.....	59
Answers to Questions on the Periodic Table.....	61

Part II: Making and Remaking Compounds 63

Chapter 5: Building Bonds 65

Pairing Charges with Ionic Bonds.....	66
Sharing Charge with Covalent Bonds.....	68
Occupying and Overlapping Molecular Orbitals.....	72
Tugging on Electrons within Bonds: Polarity.....	74
Shaping Molecules: VSEPR Theory and Hybridization.....	77
Answers to Questions on Bonds	82

Chapter 6: Naming Compounds 85

Naming Ionic Compounds	85
Dealing with Those Pesky Polyatomic Ions	87
Giving Monikers to Molecular Compounds.....	89
Seeing the Forest: A Unified Scheme for Naming Compounds	91
Answers to Questions on Naming Compounds	94

Chapter 7: Managing the Mighty Mole 97

Counting Your Particles: The Mole.....	97
Assigning Mass and Volume to Moles.....	99
Giving Credit Where It's Due: Percent Composition	102
Moving from Percent Composition to Empirical Formulas.....	103
Moving from Empirical Formulas to Molecular Formulas.....	105
Answers to Questions on Moles	107

Chapter 8: Getting a Grip on Chemical Equations 111

Translating Chemistry into Equations and Symbols	111
Making Your Chemical Equations True by Balancing.....	113
Recognizing Reactions and Predicting Products.....	116
Combination	116
Decomposition	116
Single replacement	117
Double replacement	118
Combustion	118
Getting Rid of Mere Spectators: Net Ionic Equations.....	120
Answers to Questions on Chemical Equations.....	122

Chapter 9: Putting Stoichiometry to Work 125

Using Mole-Mole Conversions from Balanced Equations.....	125
Putting Moles at the Center: Conversions Involving Particles, Volumes, and Masses	128
Limiting Your Reagents.....	130
Counting Your Chickens after They've Hatched: Percent Yield Calculations.....	133
Answers to Questions on Stoichiometry.....	135

Part III: Examining Changes in Terms of Energy 141**Chapter 10: Understanding States in Terms of Energy.....143**

Describing States of Matter with Kinetic Theory	143
Make a Move: Figuring Out Phase Transitions and Diagrams	146
Discerning Differences in Solid States	148
Answers to Questions on Changes of State.....	150

Chapter 11: Obeying Gas Laws.....151

Getting the Vapors: Evaporation and Vapor Pressure	152
Playing with Pressure and Volume: Boyle's Law	153
Tinkering with Volume and Temperature: Charles's Law and Absolute Zero.....	155
All Together Now: The Combined and Ideal Gas Laws	156
Mixing It Up with Dalton's Law of Partial Pressures	158
Diffusing and Effusing with Graham's Law	159
Answers to Questions on Gas Laws	161

Chapter 12: Dissolving into Solutions.....163

Seeing Different Forces at Work in Solubility	163
Altering Solubility with Temperature.....	165
Concentrating on Molarity and Percent Solutions	168
Changing Concentrations by Making Dilutions	170
Answers to Questions on Solutions	172

Chapter 13: Playing Hot and Cold: Colligative Properties.....175

Portioning Particles: Molality and Mole Fractions	175
Too Hot to Handle: Elevating and Calculating Boiling Points	178
How Low Can You Go? Depressing and Calculating Freezing Points	180
Determining Molecular Masses with Boiling and Freezing Points	182
Answers to Questions on Colligative Properties.....	184

Chapter 14: Exploring Rate and Equilibrium.....187

Measuring Rates	187
Focusing on Factors that Affect Rates	191
Measuring Equilibrium.....	193
The equilibrium constant	194
Free energy	194
Checking Out Factors that Disrupt Equilibrium	197
Answers to Questions on Rate and Equilibrium.....	199

Chapter 15: Warming Up to Thermochemistry201

Working with the Basics of Thermodynamics	201
Holding Heat: Heat Capacity and Calorimetry.....	203
Absorbing and Releasing Heat: Endothermic and Exothermic Reactions	206
Summing Heats with Hess's Law	208
Answers to Questions on Thermochemistry.....	211

Part IV: Swapping Charges213**Chapter 16: Giving Acids and Bases the Litmus Test.....215**

Three Complementary Methods for Defining Acids and Bases.....	215
Method 1: Arrhenius sticks to the basics	215
Method 2: Brønsted-Lowry tackles bases without a hydroxide ion.....	216
Method 3: Lewis relies on electron pairs.....	217
Measuring Acidity and Basicity: pH, pOH, and K_w	219
Finding Strength through Dissociation: K_a and K_b	222
Answers to Questions on Acids and Bases	224

Chapter 17: Achieving Neutrality with Equivalents, Titration, and Buffers.....227

Examining Equivalents and Normality.....	228
Concentrating on Titration to Figure Out Molarity.....	230
Maintaining Your pH with Buffers	233
Measuring Salt Solubility: K_{sp}	235
Answers to Questions on Neutralizing Equivalents.....	237

Chapter 18: Accounting for Electrons in Redox239

Keeping Tabs on Electrons with Oxidation Numbers	239
Balancing Redox Reactions under Acidic Conditions.....	242
Balancing Redox Reactions under Basic Conditions	244
Answers to Questions on Electrons in Redox.....	246

Chapter 19: Galvanizing Yourself into Electrochemistry.....249

Identifying Anodes and Cathodes	249
Calculating Electromotive Force and Standard Reduction Potentials.....	252
Coupling Current to Chemistry: Electrolytic Cells	256
Answers to Questions on Electrochemistry	259

Chapter 20: Doing Chemistry with Atomic Nuclei.....263

Decaying Nuclei in Different Ways.....	263
Alpha decay	263
Beta decay	264
Gamma decay	264
Measuring Rates of Decay: Half-Lives	266
Making and Breaking Nuclei: Fusion and Fission	267
Answers to Questions on Nuclear Chemistry.....	269

Part V: Going Organic271**Chapter 21: Making Chains with Carbon.....273**

Single File Now: Linking Carbons into Continuous Alkanes.....	273
Going Out on a Limb: Making Branched Alkanes by Substitution	276
Getting Unsaturated: Alkenes and Alkynes	280
Rounding 'em Up: Circular Carbon Chains.....	282
Wrapping your head around cyclic aliphatic hydrocarbons	282
Sniffing out aromatic hydrocarbons.....	283
Answers to Questions on Carbon Chains.....	285

Chapter 22: Seeing Isomers in Stereo	289
Picking Sides with Geometric Isomers.....	289
Alkenes: Keen on cis-trans configurations	290
Alkanes that aren't straight-chain: Making a ringside bond.....	290
Alkynes: No place to create stereoisomers	291
Staring into the Mirror with Enantiomers and Diastereomers	293
Getting a grip on chirality.....	293
Depicting enantiomers and diastereomers in Fischer projections	294
Answers to Questions on Stereoisomers.....	299
Chapter 23: Moving through the Functional Groups	301
Meeting the Cast of Chemical Players	301
Alcohols: Hosting a hydroxide	303
Ethers: Invaded by oxygen	303
Carboxylic acids: -COOH brings up the rear	304
Esters: Creating two carbon chains.....	304
Aldehydes: Holding tight to one oxygen.....	305
Ketones: Lone oxygen sneaks up the chain	305
Halocarbons: Hello, halogens!.....	306
Amines: Hobnobbing with nitrogen.....	306
Reacting by Substitution and Addition.....	309
Seeing Chemistry at Work in Biology	311
Carbohydrates: Carbon meets water	311
Proteins: Built from amino acids.....	312
Nucleic acids: The backbones of life.....	313
Answers to Questions on Functional Groups	316

Part VI: The Part of Tens.....**319**

Chapter 24: Ten Formulas to Tattoo on Your Brain	321
The Combined Gas Law	321
Dalton's Law of Partial Pressures	322
The Dilution Equation	322
Rate Laws.....	322
The Equilibrium Constant	323
Free Energy Change.....	323
Constant-Pressure Calorimetry	324
Hess's Law	324
pH, pOH, and K_w	324
K_a and K_b	325
Chapter 25: Ten Annoying Exceptions to Chemistry Rules	327
Hydrogen Isn't an Alkali Metal.....	327
The Octet Rule Isn't Always an Option.....	327
Some Electron Configurations Ignore the Orbital Rules.....	328
One Partner in Coordinate Covalent Bonds Giveth Electrons; the Other Taketh	329
All Hybridized Orbitals Are Created Equal.....	329
Use Caution When Naming Compounds with Transition Metals	330

You Must Memorize Polyatomic Ions.....	330
Liquid Water Is Denser than Ice.....	331
No Gas Is Truly Ideal	331
Common Names for Organic Compounds Hearken Back to the Old Days.....	332

<i>Index</i>	333
