

INDEX

A

Acceptable uncertainty, and game effectiveness, 46
Adams, E., 126, 137
ADDIE design process, 123, 124–125
Affect: ARCS instructional model and, 27;
as element of design, 63–64, 71, 134,
179; information processing and, 180;
learning and, 12
Age, designing for, 169–170
Algorithms, use of, 147
Allen, M., 62, 125
American Society for Training and Development (ASTD), 193
Analogical reasoning, 41
Anchored instruction, 31–32
Anderson, J. R., 32
Animation: costs of, 158; versus graphics,
165
ARCS (Attention, Relevance, Confidence,
& Satisfaction) model of instructional
design, 27

Artificial intelligence (AI), 183–184
Audio: as dynamic media, 163–165; and
speech recognition technology, 186; and
use of music/noises, 165
Avatar, character development of, 141

B

Barrows, H. S., 14
Behavioral objectives, in design framework,
124
Benchmarks, game effectiveness, 46
Biofeedback, 185
Bloom, B. S., 26
Branching scenarios. *See* Contingent
scenarios
Briggs, L., 26
Brown, J. S., 30, 32
Budget, and design choice, 157–159
Buxton, W.A.S., 186

C

Campbell, J., 44

- Carroll, J. M., 31, 46
- Cartoons and comics, 163; communication power of, 167; value and ease of using, 85–86, 166–167
- Challenges: adjustment of, 139, 164; as element of engagement, 43–44, 49, 58–59, 135; incorporating into game, 67–68; and levels of play, 67
- Chandler, P., 164
- Clark, R. C., 164
- Clarke, A. C., 186
- Cleary, C., 14, 31
- Coaching engine, 67–68, 184–185
- Cognition and Technology Group at Vanderbilt, 14, 31
- Cognitive apprenticeship model, 30–31
- Cognitive flexibility theory, 31
- Collins, A., 30, 32
- Complexity, engaged learning and, 27, 33, 135
- Component display theory, 124
- Computer game design: elements of engagement in, 43–44, 46; level design concept in, 47–48; meaningful narrative in, 45
- Conner, M. L., 32, 184
- Console game: defined, 40–41; tutorials, 145
- Constructivist learning approaches, 32
- Content model, 81–82
- Contingent scenarios, 142; advantages/disadvantages of, 96; case study of, 96–102; flow diagram for, 99–101 (*fig*); learners' misconceptions and, 95; tracking performance in, 174
- Control, as element of engagement, 43–44, 46
- Cordova, D. I., 14
- Corporate e-learning strategy, 80–87
- Costs: of alternatives to game engine, 158–159; media, 164; production values and, 158
- Coulson, R. L., 31
- Crawford, C., 47, 126
- Creativity, sources of inspiration for, 138
- Critiquing, value of, 190
- Csikszentmihalyi, I. S., 43
- Csikszentmihalyi, M., 43
- Culture-specific games, 168
- Curiosity, as element of engagement, 43–44
- ## D
- Decision points, tools for capturing, 147–148
- Decisions, defined, 33
- “Déjà Vu,” 57
- Denning, S., 4, 45
- Design document: in gaming industry, 126; for model-based designs, 151
- Design documentation, reasons for, 138–139
- Design of Everyday Things, The* (Norman), 145
- Design teams, 116, 125; advantages of, 175; necessary skills for, 176–177; potential problems for, 175; in usability design, 175–176
- Developmental level, designing for, 169–170
- “Diamond Age, The,” 172
- Direct manipulation, in HCI studies, 46
- DreamWeaver, 161
- Drug therapy demo case study: feedback and outcomes, 111–112; game model for, 109–112; overview, 107–108; practice tasks in, 109; subject matter experts' role in, 111
- Duguid, P., 32
- ## E
- Ease of learning, as design criterion, 117
- Elaboration theory, 27
- e-Learning Guild, 193
- Emergent Learning Forum, 193
- Emotional Design* (Norman), 179–180
- Emotional experience, cognition and, 12, 15
- Empirical testing, 120
- Engaged design: knowledge application in, 128–132; learning in context and, 129; meaningful practice in, 128–132; overview, 132–133 (*Exhibit 6.2*); secondary objectives in, 135; target performance in, 132; typical learner problems and, 130–131; usability testing in, 152–153

- Engaged design model: analysis phase of, 133–136; implementation of, 146–150, 151; qualitative, set of rules in, 147–148; quantitative environment for, 147; random population of, 148–149; specification phase of, 136–151
- Engaged learning: affect and, 12, 180; defined, 3; and engagement-education alignment, 2, 3(*tab*), 11, 18, 54–55(*tab*); learning theory and, 14, 15; value of, 14–15, 17–18. *See also* Learning
- Engagement metrics, 152
- Engaging experiences, 11–13; common elements of, 43–44, 48–49; in computer game design, 47–48; and computer interface design, 45–46; elements of drama in, 46; flow state in, 43, 46; narrative and, 44–45
- Environments: programming, 104–105, 162; technology, 127, 173–174; visual, 186
- Evaluation: authentic, 173; educational metrics for, 152–153; expert, 171; heuristic, 170; measures, 117; process, 121–122; scoring and success rules in, 174; statistical significance and, 121; usability, 125; and usability goals, 152; user testing as, 170–171
- “EverQuest,” 171
- Evolutionary prototyping, 120
- Experience(s): as element of engagement, 43–44; emotional, 12, 15; of flow, 43, 46; psychological aspects of, 43–44. *See also* Interface experiences; Learning experiences
- Experience design field, 173
- Extreme programming movement, 176
- F**
- Facilitator guidelines, 4–5
- Fantasy, engagement and, 43–44
- Feedback, 46; mechanism, 57; requirements, 142; and story context, 62–63; and theme, 57
- Feltovich, P. J., 31
- Flash, 93, 182; full games developed in, 160
- Flow diagrams, 149–150
- 4C/ID (four-component instructional design), 31
- Freeman, D., 47, 126
- Functional fixedness, as design trap, 118
- G**
- Gagné, R., 26
- Game, The* (movie), 183
- Game(s): commercial, as tools, 160; cultural barriers to using, 167–168; defined, 15; as evaluation environments, 173–174; major categories of, 40–43
- Game design. *See* Learning game design
- Game Developers Association, 193
- Game engine model: advantages of, 142–143; case study based on, 107–112; costs of, 157–158; design teams and, 177; help and feedback in, 144; implementation requirements for, 104–105, 146; nondeterministic outcome in, 104; overview, 102–103; scenarios and, 104; simulations and, 103–105; specifications for, 105–107; success rules in, 174; tools for, 159–160; underlying model for, 102, 104, 146, 147
- Game industry: compared to movie industry, 125–126; constraints in, 126; design process in, 127–128; game criteria in, 127; technology environment for, 127; testing and quality control in, 128
- Game platforms, 40–41
- Game play, defining elements of, 137
- Gender, and game design, 58
- Genre, choice of, 137
- Gilmore, J. H., 187
- Goal clarity, as design element, 49
- Goal-based scenarios, 31
- Goldman, W., 175
- Graphics: versus animation, 165; conceptual, 163
- Group games, 171–172
- H**
- Haptic input, 186
- Help system, 144, 147–148
- High-fidelity simulations, 12
- Hogg, R., 15
- Hollan, J. D., 46

Howland, J., 32
 HTML, uses of, 98, 158, 161
 Human-computer interaction (HCI), elements of engagement in, 45–46
 Humor, use of, 139, 166
 Hutchins, E. L., 46
 HyperCard: as development environment, 65; as prototyping tool, 159

I

IFETS, 193
 Input-output interreferentiality, 49
 Instructional design, 24–28; ADDIE prototypical approach to, 123–125; defined, 25; design teams and, 125; elements of learning in, 27–28; empirical basis of, 25; enhanced model of, 35 (*fig*), 76–77; instruction cycle and, 25 (*fig*); models, 30–33, 35; specification, 124; structure, 27–28; theoretical frameworks for, 26–27
 Instructional navigation structure, component-based, 82 (*fig*)
 Instructional system design (ISD). *See* Instructional design
 Instructional task, help system for, 144
 Intelligent tutoring systems (ITS), 183–184
 Interactive learning, 12; mobile devices for, 182
 Interface experiences: direct options in, 70; dramatic elements in, 46
 Interface(s), 158; cost factors in choosing, 158; design tools, 161; help system, 144; mapping learning to, 144–146; theme and, 56; tutorial for, 145–146; wire-frame versions of, 138
 International Society for Performance and Improvement (ISPI), 193
 Issue-based information systems (IBIS), 139
 ITFORUM, 193

J

Jacobson, M. F., 31
 Job aids: creation of, 142, 143; as learning objects, 181
 Johnston-Laird, P. N., 14
 Jonassen, D. H., 32
 “Journey to the Wild Divine,” 185

K

Kay, A., 187
 Keller, J., 26, 27
 Knowledge application: disparate contexts for, 79; in engaged design, 128–133; learning objectives and, 33
 Knowledge taxonomies, 26
 Knowledge testing: versus knowledge application, 33, 128, 129 (*tab*); in mini-scenarios, 78–79
 Kolb, D. A., 184
 Krathwohl, D. R., 26

L

Laurel, B., 46
 Lave, J., 14
 Learner characteristics: personalized learning and, 183–184; setting and, 137; types of, 134
 Learner misconceptions: choosing distractors for, 130–131; in contingent scenarios, 95; story-based feedback on, 134
 Learner styles, support for, 82
 Learning: cycle, 24 (*fig*); cognitive research on, 30–33; goals, 29–30, 116; as “hard fun,” 10; hierarchy of knowledge in, 16–17; online, 12, 15–16; reflection and, 24, 30; retention, 29–30, scaffolded, 30; self-directed, 13; transfer, 29–30, 32. *See also* Engaged learning
 Learning by doing, and game effectiveness, 46
 Learning content design, 26
 Learning design model: basic (waterfall), 114; five levels of, 76; implementation requirements of, 146–150; trade-offs in choice of, 112. *See also specific model*
 Learning evaluation. *See* Evaluation
 Learning experiences: core elements of, 27–28, 36–37, 53–55; designing, 136–139; engagement and, 4, 11–13, 39–40; and use context, 135
 Learning game design: action-domain link in, 59–60, 68–69; active decision making in, 61, 69–70; adding constraints to, 119; affective elements in, 63–64, 71; brainstorming in, 118, 119; character

- development in, 141; coaching tool in, 67–68, 184–185; cognitive challenge in, 58–59, 60; component stages of, 116–123; data collection and analysis in, 116–117; design traps in, 118; direct versus indirect mapping in, 61–62; element of unpredictability in, 63–64; evaluation in, 117, 121–122; feedback and help system in, 57, 62–63, 71, 130, 139, 144; future research and, 179–188; genre choice in, 59–60, 137; goals and objectives in, 10, 57, 117; implementation phase of, 120–121; incorporating difficulty levels into, 143; introduction in, 57; iterative design cycle in, 114, 115(*fig.*), 117, 122–123; iterative testing in, 120; larger learning process and, 143; launching system for, 173–174; learning support in, 142–144; mapping learning to interface in, 144–146; media use in, 140; pedagogical support in, 142–144; problem-learner link in, 60, 69; process, 114–122; question set in, 120; setting in, 60; solution criteria in, 117, 118; specification process in, 118–120; spiral model of, 115; story/story line in, 56, 139–141; tutorials in, 145–146. *See also* Engaged design
- Learning game design checklist, 153–154(*Exhibit 6-4*)
- Learning Management System (LMS), 93, 173
- Learning models: cognitive apprenticeship, 30–31; cognitive flexibility theory and, 31; constructivist, 32; convergent framework for, 27–28, 33–37; four component instructional design (4C/ID), 31; goal-based scenarios, 31; situated learning, 32; whole-body learning, 32; ZOPD (zones of proximal development), 32–33
- Learning objective: cognitive development as, 58–59; defined, 3; complexity in, 33; defined, 3; and directness of transfer, 137; engaged learning approach to, 16, 18–19; establishment of, 27, 28, 34; and game design, 18–19; and knowledge application, 33; and learning-doing continuum, 15–17; and performance outcomes, 27; usability of, 133–135
- Learning objects, 184; concept of, 180–181; standards, argument for, 181
- Learning styles, and personalized learning experiences, 183–184
