Preface—Volume 2: Multiparametric Model-Based Control	<i>xi</i>
References	<i>xvi</i>
List of Authors	<i>xvii</i>

Part I Theory 1

1 Linear Model Predictive Control via Multiparametric Programming	3
1.1 Introduction	3
1.1.1 Multiparametric Programming	4
1.1.2 Model Predictive Control	5
1.2 Multiparametric Quadratic Programming	7
1.2.1 Definition of CR^{rest}	11
1.3 Numerical Example	13
1.4 Computational Complexity	16
1.4.1 Computational Time	19
1.5 Extensions to the Basic MPC Problem	20
1.5.1 Reference Tracking	20
1.5.2 Relaxation of Constraints	21
1.5.3 The Constrained Linear Quadratic Regulator Problem	22
1.6 Conclusions	22
References	22
2 Hybrid Parametric Model-Based Control	25
2.1 Introduction	25
2.2 The Explicit Control Law for Hybrid Systems via Parametric Programming	26
2.2.1 General Hybrid Systems	26
2.2.2 Piecewise Linear Systems	29
2.3 The Explicit Control Law for Continuous Time Systems via Parametric Programming	36

2.3.1	Problem Formulation	36
2.3.2	Stability Requirements	36
2.3.3	Solution Procedures	38
2.3.4	Illustrative Process Example 2.3	39
2.3.5	Illustrative Biomedical Process Example 2.3.2	42
2.3.6	Illustrative Mathematical Example 2.3.3	44
2.4	Conclusions	45
	References	47
3	Robust Parametric Model-Based Control	49
3.1	Introduction	49
3.2	Robust Parametric Model-Based Control for Systems with Input Uncertainties	50
3.2.1	Open-Loop Robust Parametric Model Predictive Controller	50
3.2.2	Parametric Solution of the Inner Maximization Problem	52
3.2.3	Closed-Loop Robust Parametric Model-Based Control	54
3.2.4	Reference Tracking Robust Parametric Model-Based Controller	58
3.2.5	Example—Two State MIMO Evaporator	59
3.3	Robust Parametric Model-Based Control for Systems with Model Parametric Uncertainties	62
3.3.1	MPC of Parametric Uncertain Linear Systems	62
3.3.2	Uncertain Matrices	65
3.3.3	The Robust Counterpart Problem	67
3.3.4	Example of Two-Dimensional Linear Parametric Uncertain System	73
3.4	Conclusions	74
	References	75
4	Parametric Dynamic Optimization	77
4.1	Introduction	77
4.2	Solution Procedure—Theoretical Developments for mp-DO	78
4.2.1	Control Vector Parametrization	79
4.2.2	Parameter Representation	79
4.2.3	Problems Without Path Constraints	80
4.2.4	Problems with Path Constraints	82
4.3	Illustrative Examples	87
4.3.1	Example 1: Exothermic CSTR	87
4.3.2	Example 2: Fluidized Catalytic Cracking Unit	93
4.4	Software Implementation Issues	96
4.5	Concluding Remarks	97

Appendix A. Critical Parameter Values in Path Constraints	98
Appendix B. Solution Properties of the mp-DO Algorithm	101
Appendix B.1. Convergence Properties of the Direct mp-DO Algorithm	101
Appendix B.2. Solution of a Semiinfinite Program	101
Acknowledgment	102
References	102
5	Continuous-Time Parametric Model-Based Control
5.1	Introduction
5.1.1	Linear Continuous-Time MPC
5.1.2	Implicit MPC
5.2	Multiparametric Dynamic Optimization
5.2.1	Optimality Conditions
5.2.2	Parametric Control Profile
5.2.3	Algorithm for Solving the mp-DO Problem
5.3	Control Implementation
5.4	Comparison Between Continuous-Time and Discrete-Time MPC
5.5	Examples
5.5.1	Example of a SISO System with One State
5.5.2	Example of a SISO System with Two States
5.6	Extension to Nonlinear Problem
5.6.1	Example
5.7	Conclusions
	References
Part II	Applications
6	Integration of Design and Control
6.1	Introduction
6.1.1	Process and Control Design Using Advanced Control Schemes
6.1.2	Simultaneous Design and Control Under Uncertainty Framework
6.1.3	Mixed-Integer Dynamic Optimization
6.2	Problem Formulation
6.3	Theoretical Developments—Solution Procedure
6.3.1	Problem Reformulation
6.3.2	Decomposition Approach for Process and Control Design—Algorithm 6.2
6.3.3	Modeling Aspects of the Parametric Controller
6.3.4	Disturbance Rejection
6.3.5	Control Structure Selection
6.4	Process Example 6.2—Evaporation Process
6.4.1	Objective Function

6.4.2	Inequality Constraints	157
6.4.3	Disturbances	158
6.4.4	Decision Variables	158
6.5	Process Example 6.3—Distillation Column	160
6.5.1	Problem Formulation	160
6.6	Computational Times and Software Implementation Issues	167
6.7	Conclusions	168
	References	168
7	Model-Based Control of Blood Glucose for Type 1 Diabetes	173
7.1	Introduction	173
7.2	Model Predictive Control for Type 1 Diabetes	175
7.3	Explicit Insulin Delivery Rate	177
7.4	Inter- and IntraPatient Variability	183
7.5	Multiobjective Blood Glucose Control	188
7.5.1	Asymmetric Objective Function	188
7.5.2	Constraint Prioritization	191
7.6	Concluding Remarks	194
	Acknowledgments	196
	References	196
8	Control of Anesthesia	197
8.1	Introduction	197
8.2	Compartmental Model for Anesthesia	200
8.2.1	Pharmacokinetic Modeling of Anesthesia	200
8.2.2	Pharmacodynamic Modeling of Anesthesia	202
8.2.3	Baroreflex	205
8.3	Validation of the Compartmental Model for Anesthesia	207
8.4	Model-Based and Parametric Control of Anesthesia	211
8.5	Concluding Remarks	214
	References	215
9	Model-Based Control of Pilot Plant Reactor	217
9.1	Introduction	217
9.2	Description of the Reactor	218
9.2.1	Reactor Simulation	221
9.3	Planning Experiments: Steady-State Reactor Behavior	221
9.4	Derivation of the Explicit Model-Based Control Law	224
9.5	Results	225
9.5.1	Implementation of the Parametric Controller	226
9.6	Concluding Remarks	228
	References	229

10	MPC on a Chip	231
10.1	Introduction	231
10.2	Automatic Control: History and Present	231
10.2.1	Proportional Integral Derivative Control	233
10.2.2	Model-Based Predictive Control	233
10.3	Parametric MPC	235
10.3.1	Online Optimization via Off-Line Optimization	236
10.4	Putting Theory into Practice	238
10.4.1	A Parametric MPC Controller for the PARSEX Pilot Plant	238
10.4.2	Parametric MPC for an Air Separation Unit	240
10.4.3	An Automotive Example—pMPC for an Active Valve Train Actuation System	243
10.5	Blood Glucose Control for Type 1 Diabetes	248
10.6	Conclusions	252
	References	253
	Index	255
