Preface	xiii
1 Introduction	1
PART I ENERGY: CONCEPTS, HISTORY AND PROBLEMS	7
2 Energy	9
2.1 What is energy?	9
2.2 Units	11
2.3 Power	13
2.4 Energy in various disguises	14
2.5 Energy quality and exergy	21
2.6 Student exercises	25
3 The planet's energy balance	27
3.1 The sun	27
3.2 The earth	31
3.3 Comparisons	41
3.4 Student exercises	43
4 A history of humankind's use of energy	45
4.1 Energy and society	46
4.2 Wealth, urbanization and conflict	66
4.3 Our current level of energy use	69
4.4 Student exercises	74
5 Sustainability, climate change and the global environment	77
5.1 Sustainability	77
5.2 Climate change	79
5.3 Other concerns	114
5.4 Debating climate change and answering the sceptics	127
5.5 The atmosphere	134
5.6 Student exercises	139

6 Economics and the environment	143
6.1 Key concepts	143
6.2 Environmental economics	154
6.3 Student exercises	158
7 Combustion, inescapable inefficiencies and the generation of electricity	159
7.1 Combustion	159
7.2 Calorific values	161
7.3 Inescapable inefficiencies	161
7.4 Heat pumps	165
7.5 Double Carnot efficiencies	168
7.6 The generation of electricity from heat	168
7.7 Student exercises	177
PART II UNSUSTAINABLE ENERGY TECHNOLOGIES	179
8 Coal	183
8.1 History	184
8.2 Extraction	185
8.3 The combustion of coal	186
8.4 Technologies for use	187
8.5 Example applications	190
8.6 Global resource	193
8.7 Student exercises	196
9 Oil	199
9.1 Extraction	200
9.2 The combustion of oil	204
9.3 Technologies for use	205
9.4 Example application: the motor car	205
9.5 Global resource	208
9.6 Student exercises	210
10 Gas	211
10.1 Extraction	211
10.2 The combustion of gas	214
10.3 Technologies for use	214
10.4 Example application: the domestic boiler	215
10.5 Global resource	216
10.6 Student exercises	220
11 Non-conventional hydrocarbons	221
11.1 Oil shale	221
11.2 Tar sands	222

CONTENTS

ix

11.3 Methane hydrate	223
11.4 Student exercises	226
12 Nuclear power	227
12.1 Physical basis	227
12.2 Technologies for use	229
12.3 Environmental concerns	239
12.4 Waste	244
12.5 World resource	245
12.6 Example applications	248
12.7 Is nuclear power the solution to global warming?	254
12.8 Student exercises	257
13 Hydropower	259
13.1 History	259
13.2 Technologies for use	261
13.3 Example application: Itaipu hydroelectric station	268
13.4 Environmental impacts	271
13.5 Pumped storage	273
13.6 Global resource	273
13.7 Student exercises	275
14 Transport and air quality	277
14.1 Present day problems	278
14.2 Air quality and health	282
14.3 Example application: air quality in Exeter, UK	290
14.4 Student exercises	290
15 Figures and philosophy: an analysis of a nation's energy supply	291
15.1 The economy	293
15.2 Production	294
15.3 Consumption	294
15.4 Oil and gas production	296
15.5 Prices	298
15.6 Fuel poverty	302
15.7 Carbon emissions	303
15.8 Sustainable energy in the UK: the current state of play	303
15.9 Student exercises	307
PART III CLIMATE CHANGE: PREDICTIONS AND POLICIES	309
16 Future world energy use and carbon emissions	311
16.1 The world's future use of energy	312
16.2 Student exercises	322

17	The impact of a warmer world	323
17.1	Climate models	324
17.2	Natural variability and model reliability	326
17.3	Future climate change	331
17.4	Impacts	331
17.5	Costing the impact	343
17.6	Student exercises	343
18	Politics in the greenhouse: contracting and converging	345
18.1	Climate negotiations	348
18.2	Another approach	355
18.3	Bringing it all together	358
18.4	Conclusion	364
18.5	Student exercises	364
PART IV	SUSTAINABLE ENERGY TECHNOLOGIES	365
IV.1	Current world sustainable energy provision	367
19	Energy efficiency	371
19.1	Cogeneration	372
19.2	Reducing energy losses	374
19.3	Energy recovery	383
19.4	Energy efficiency in buildings	386
19.5	Student exercises	394
20	Solar power	397
20.1	Passive solar heating	398
20.2	Heat pumps	405
20.3	Solar water heating	409
20.4	Low temperature solar water heating	409
20.5	Example application: solar water heating, Phoenix Federal Correction Institution, USA	416
20.6	High temperature solar power	417
20.7	Low temperature water-based thermal energy conversion	422
20.8	OECD resource	423
20.9	Student exercises	424
21	Photovoltaics	427
21.1	History	427
21.2	Basic principles	427
21.3	Technologies for use	431
21.4	Electrical characteristics	433
21.5	Roof-top PV	436
21.6	Example application: Doxford Solar Office, UK	439
21.7	OECD resource	440
21.8	Student exercises	440

CONTENTS

xi

22	Wind power	441
22.1	History	444
22.2	Technologies for use	447
22.3	The modern horizontal axis wind turbine	459
22.4	Environmental impacts	462
22.5	OECD resource	467
22.6	Example application: Harøy Island Wind Farm, Sandøy, Norway	468
22.7	Student exercises	469
23	Wave power	471
23.1	Wave characteristics	472
23.2	Technologies for use	474
23.3	Example application: the Pelamis P-750 wave energy converter	478
23.4	Student exercises	478
24	Tidal and small-scale hydropower	481
24.1	Tides	482
24.2	Small-scale hydropower	490
24.3	OECD resource	496
24.4	Student exercises	498
25	Biomass	499
25.1	History	499
25.2	Basic principles	500
25.3	Technologies for use	502
25.4	Example application: anaerobic digester, Walford College Farm, UK	510
25.5	Global resource	511
25.6	OECD resource	513
25.7	Student exercises	514
26	Geothermal	515
26.1	Background	515
26.2	History	519
26.3	Resource and technology	520
26.4	Technologies for use	523
26.5	Environmental problems	525
26.6	World resource	525
26.7	OECD resource	526
26.8	Example application: Hachobaru geothermal power station, Kokonoe-machi, Japan	526
26.9	Student exercises	528
27	Fast breeders and fusion	529
27.1	Fast breeder reactors	529
27.2	Fusion	532
27.3	Example application: JET Torus, Culham, UK	535
27.4	Student exercises	537

28	Alternative transport futures and the hydrogen economy	539
28.1	Improving energy efficiency	541
28.2	Alternative transport fuels and engines	544
28.3	Hydrogen powered vehicles and the hydrogen economy	550
28.4	Fuel cells	552
28.5	Example application: the greening of natural gas	558
28.6	Student exercises	559
29	Carbon sequestration and climate engineering	561
29.1	Capture technologies	562
29.2	Storage technologies	563
29.3	The reflection of solar radiation	567
29.4	Example application: Statoil, Sleipner West gas field, North Sea	568
29.5	Student exercises	569
30	A sustainable, low carbon future?	571
30.1	Methodology and assumptions	572
30.2	Results	572
30.3	Worldwide reductions	578
30.4	Conclusion	581
30.5	What can I do?	581
30.6	Student exercises	582
	References	583
	Appendix 1 National energy data	593
	Appendix 2 Answers to in-text problems	613
	Appendix 3 Bibliography and suggested reading	641
	Appendix 4 Useful data	643
	Index	649
