I Disease Surveillance, a Public Health Priority	1
<i>Joseph S. Lombardo, David Ross</i>	
1.1 Introduction	1
1.2 The Emerging Role of Informatics in Public Health Practice	2
1.3 Early Use of Technology for Public Health Practice	5
1.3.1 Early Use of Analytics, Visualization, and Communications	5
1.3.2 Early Informatics Applications in Medicine & Public Health	6
1.3.3 Public Health Records Archiving	9
1.4 Guiding Principles for Development of Public Health Applications	10
1.5 Information Requirements for Automated Disease Surveillance	12
1.6 Historical Impact of Infectious Disease Outbreaks	14
1.6.1 Smallpox	14
1.6.2 Plague	15
1.6.3 Spanish Influenza, 1918	16
1.6.4 Influenza Pandemics after 1918	18
1.7 Disease as a Weapon	20
1.7.1 Bioterrorism	25
1.8 Modern Disease Surveillance Applications	26
1.8.1 Components of an Early Recognition Disease Surveillance System	26
1.8.2 Modern Surveillance Applications for Use by State and Local Health Departments	30
1.8.3 National Disease Surveillance Initiatives	32
1.9 Summary	35
References	35
Part I: System Design and Implementation	41

2	Understanding the Data: Health Indicators in Disease Surveillance	43
	<i>Steven Babin, Steven Magruder, Shilpa Hakre, Jacqueline Coberly, Joseph S. Lombardo</i>	
2.1	Data Source Concepts	44
2.2	Data from Pharmacy Chains	49
2.3	Data from EMS and 911	58
2.4	Data from Telephone Triage Hotlines	60
2.5	Data from School Absenteeism and School Nurses	63
2.6	Data from Hospital Visits	65
2.7	Data from Physicians' Office Visits	66
2.8	Laboratories Role in pre-diagnostic Surveillance	68
2.9	Other Health Indicator Data	70
	2.9.1 Environmental Data	70
	2.9.2 Animal Health Data	72
2.10	Data Source Evaluation	74
	2.10.1 Approach and Methodology	75
	2.10.2 Example: Wildfires (October 2003)	76
	2.10.3 Example: Influenza Outbreak (December 2003)	79
	2.10.4 Example: Gastrointestinal Illness (January–February 2004)	83
	2.10.5 Conclusions	85
2.11	Study Questions	85
	References	87
3	Obtaining the Data	91
	<i>Richard Wojcik, Logan Hancustein, Carol Sniegoski, Rekha Holtry</i>	
3.1	Introduction to Data Collection and Archiving	91
	3.1.1 The Internet: Universal Connectivity	92
	3.1.2 Databases: Flexible Data Storage	95
	3.1.3 Summary	97
3.2	Obtaining Access to Surveillance Data	98
	3.2.1 Sharing Health Indicator Data	98
	3.2.2 Data-Sharing Issues	103
	3.2.3 HIPAA and Disease Surveillance	104
	3.2.4 Summary of Data Sharing	112
3.3	The Role of Standards in Data Exchange	113
	3.3.1 Types of Standards	114
	3.3.2 Standards Development	115
	3.3.3 Standards for Health Indicator Data in Biosurveillance	117

3.3.4	National Health Information Systems — Implementing Standards	119
3.4	Establishing the Data Feeds	119
3.4.1	Information Systems of the Data Provider or Source	120
3.4.2	Setting Up the Data Feed	121
3.4.3	Data Characteristics	123
3.4.4	Data Fields or Elements	125
3.4.5	Data Transfer Format	129
3.4.6	Data Transfer Protocol	132
3.4.7	Security Considerations	134
3.4.8	Data Import Methods	135
3.4.9	Data Cleaning	135
3.4.10	Data Quality	136
3.4.11	Summary	137
3.5	Study Questions	137
	References	138
4	Alerting Algorithms for Biosurveillance	143
	<i>Howard Burkom</i>	
4.1	Statistical Alerting Algorithms	143
4.2	Features of Alerting Algorithms	147
4.2.1	Expected Data Behavior and the Denominator Problem	147
4.2.2	Recognizing the Unexpected	149
4.2.3	Use of Data Covariates	150
4.2.4	Components of an Alerting Algorithm	151
4.2.5	Steps in Algorithmic Processing	153
4.3	Outbreak Detection as a Signal-to-Noise Problem	154
4.3.1	Understanding the Noise Background	154
4.3.2	Characterizing the Outbreak Signal	155
4.3.3	Importance of Data Aggregation Decisions	158
4.4	Algorithms Based on Time-Series Data	158
4.4.1	Control Charts for Public Health Monitoring	158
4.4.2	Data Forecasting for Public Health Monitoring	167
4.5	Spatiotemporal Alerting Methods	176
4.5.1	The Search for Hotspots and the Spatial Baseline	176
4.5.2	Spatial Scan Statistics and Enhancements	177
4.5.3	Global Clustering Methods and Adaptations	182
4.6	Methods Considering Multiple Data Sources	183
4.6.1	Decision Making with Multiple Data Sources	183

4.7	Study Questions	188
	References	189
5	Putting It Together: The Biosurveillance Information System	193
	<i>Logan Hauenstein, Richard Wojcik, Wayne Lovchen, Raj Ashar, Carol Sniegoski, Nathaniel Tabernero</i>	
5.1	Introduction	193
5.2	System Architectures for Disease Surveillance	195
5.2.1	Stand-Alone System Application Design	195
5.2.2	Thick Client vs. Thin Client	196
5.2.3	Three-Tier and Multitier Architectures	197
5.3	Databases	199
5.3.1	Database Design	199
5.3.2	Database Server Software	200
5.3.3	Database Server Hardware	200
5.3.4	Database Server Costs	202
5.3.5	DBMS Vendor Overview	202
5.4	Web Applications	203
5.4.1	Web Servers	205
5.4.2	Web Applications and Browsers	206
5.4.3	Web Applications and Geographic Information Systems	208
5.4.4	Web-Based Application Integration and Automation	209
5.5	Implementing Syndromic Grouping	210
5.5.1	Fixed Vocabulary Data	210
5.5.2	Free-Text Data	212
5.6	Implementing Detectors	216
5.6.1	When Will Detectors Be Used?	216
5.6.2	Designing the Detector Interface	217
5.7	Visualization in a Disease Surveillance Application	218
5.7.1	Detection-Focused Visualizations	218
5.7.2	Information System Interfaces	226
5.7.3	Visualizing Data and Information	227
5.8	Communication Among Surveillance Users	240
5.8.1	User Comments	241
5.8.2	Embedding User Comments into System Components	241
5.9	Security	242
5.9.1	Design and Implementation of a Secure System	245
5.9.2	User Authentication	248
5.9.3	Access Privilege Management Overview	250

5.9.4	User Responsibilities	251
5.10	System Administration	252
5.10.1	Physical Administration	253
5.10.2	Maintaining Software	254
5.10.3	User Management	254
5.11	Summary	255
5.12	Study Questions	255
	References	256
Part II: Case Studies		263
6	Modern Disease Surveillance Systems in Public Health Practice	265
	<i>Sheri Happel Lewis, Kathy Hurt-Mullen, Colleen Martin, Haobo Ma, Jerome I. Tokars, Joseph S. Tombaro, Steven Babin</i>	
6.1	Public Health Surveillance Requirements	265
6.1.1	Disease Reporting Requirements	266
6.1.2	Existing Automated Disease Surveillance Systems	269
6.2	Identification of Abnormal Health Conditions	273
6.2.1	Monitoring Surveillance System Outputs	273
6.2.2	Characterization of Anomalies	274
6.2.3	Case Studies	278
6.2.4	Summary of Anomaly Characterization	284
6.2.5	Assessing the Public Health Importance of Findings	285
6.3	Utility at the Local Level	285
6.3.1	Specific System Features and Utility to Public Health Officials	286
6.3.2	Local Perspective on Implementation	286
6.3.3	Regional Perspective	288
6.4	Electronic Biosurveillance at the National Level	291
6.4.1	BioSense System Description	291
6.4.2	Monitoring of BioSense Application for National Surveillance	295
6.4.3	Movement Toward Surveillance System Standardization	297
6.5	Summary	298
6.6	Study Questions	298
	References	299
7	Canadian Applications of Modern Surveillance Informatics	303
	<i>Jeff Aramini, Shanir Nizar Mukhi</i>	
7.1	Introduction: Disease Surveillance in Canada	303
7.1.1	Understanding the True Public Health Needs	303

7.1.2	Developing and Harnessing the Right Technology	304
7.2	Disease-Specific Surveillance Enabled Through Technology	307
7.2.1	Introduction	307
7.2.2	Working with Stakeholders to Improve Disease-Specific Surveillance Through the Implementation of Technology	307
7.2.3	Lessons Learned Through Disease-Specific Surveillance Application Development	314
7.3	Real-Time Syndromic Surveillance	315
7.3.1	Canadian Early Warning System	316
7.3.2	Unique Solution for a Unique Problem: FARMS	320
7.4	Conclusions: Public Health Surveillance	328
7.4.1	Importance of Communication and Collaboration	328
7.4.2	Integrating Surveillance into a Comprehensive Public Health Information Management Framework	329
7.4.3	Future Opportunities in Public Health Surveillance	330
7.5	Study Questions	331
	References	333

8 Case Study: Use of Tele-health Data for Syndromic Surveillance in England and Wales 335

Duncan Cooper

8.1	Introduction	335
8.1.1	What Is Tele-health?	336
8.1.2	The UK Experience: NHS Direct	336
8.1.3	Using Telephone Triage Data for Syndromic Surveillance	338
8.2	System Design and Epidemiological Considerations	340
8.2.1	Data Availability	340
8.2.2	System Design	340
8.2.3	Investigating Exceedances	342
8.3	Results from the NHS Direct Syndromic Surveillance System	345
8.3.1	Stages 1 to 3	345
8.3.2	What Have the Data Detected?	346
8.3.3	Weekly Reporting	351
8.4	Adding Value to the Surveillance Data	352
8.4.1	Linking Syndromic Data with Traditional Laboratory Sources	352
8.4.2	A Statistical Model: Types of Infections That Cause People to Phone Telephone Triage Systems	354
8.5	Conclusions	356
8.5.1	Main Benefits of the System	356

8.5.2	System Evaluation	358
8.5.3	Cautionary Note for Future Work	358
8.5.4	Integration with Other UK Primary Care Surveillance	359
8.5.5	Recommendations	359
8.5.6	Final Remarks	361
8.6	Study Questions	361
	References	362
9	Surveillance for Emerging Infection Epidemics in Developing Countries: EWORS and Alerta DISAMAR	367
	<i>Jean-Paul Chretien, David Blazes, Cecilia Mundaca, Jonathan Glass, Sheri Happel Lewis, Joseph S. Lombardo, R. Loren Erickson</i>	
9.1	Improving Surveillance in Resource-Poor Settings	368
9.2	U.S. Military Overseas Public Health Capacity Building	369
9.3	Case Study 1: EWORS (Southeastern Asia and Peru)	371
9.3.1	System Development, Configuration, and Operation	371
9.3.2	Outbreak Detection and Response	373
9.3.3	System Flexibility	378
9.3.4	Summary	379
9.4	Case Study 2: Alerta DISAMAR (Peru)	380
9.4.1	System Development, Configuration, and Operation	380
9.4.2	Outbreak Detection and Response	384
9.4.3	System Flexibility	387
9.4.4	Summary	390
9.5	Conclusions	390
9.6	Study Questions	391
	References	392
	Part III: Evaluation, Education, and the Future	397
10	Evaluating Automated Surveillance Systems	399
	<i>David L. Buckeridge, Michael W. Thompson, Steven Babin, Marvin L. Sikes</i>	
10.1	The Context of Evaluation	399
10.1.1	Why? — The Need to Evaluate	399
10.1.2	What? — The Focus of Evaluation	400
10.1.3	How? — The Methods of Evaluation	401
10.2	Defining the Evaluation	401
10.2.1	Question and Scope	401
10.2.2	System Configuration	402

10.2.3	Outbreak Scenario	402
10.2.4	Evaluation Plan	402
10.3	Identifying or Creating Evaluation Data	403
10.3.1	Data for Evaluation	403
10.3.2	Authentic Outbreaks	405
10.3.3	Simulated Outbreaks	405
10.3.4	Simulated Background	409
10.4	Applying Detection Algorithms and Response Protocols	410
10.4.1	Combining Background and Outbreak Data	410
10.4.2	Applying Outbreak Detection Algorithms	410
10.4.3	Applying Response Protocols	410
10.5	Measuring Performance	411
10.5.1	Outbreak Detection	412
10.5.2	Response Protocols	420
10.6	Summary	420
10.7	Study Questions	421
	References	421
11	Educating the Workforce: Public Health Informatics Training	425
	<i>Harold Lehmann</i>	
11.1	Competencies for Disease Surveillance	425
11.2	Professions of Disease Surveillance	432
11.3	Training Opportunities in Public Health Education	432
11.4	Informatics Training	433
11.4.1	Training Opportunities in Public Health Informatics	435
11.5	Conclusions	436
11.6	Study Questions	436
	References	437
12	The Road Ahead: The Expanding Role of Informatics in Disease Surveillance	443
	<i>Joseph S. Lombardo</i>	
12.1	Introduction	443
12.2	Integration of Disease Surveillance Systems	444
12.2.1	Data Privacy and Public Health Networks	445
12.2.2	Standards for Information Sharing	446
12.2.3	Regional and National Networks	447
12.3	Surveillance System Enhancements	448
12.3.1	Better Health Indicators	448

12.3.2	Biostatistics	450
12.3.3	Information Technology	451
12.3.4	Health Department Business Processes	452
12.4	Study Questions	452
	References	453
