

Index

Note to the reader: Throughout this index **boldfaced** page numbers indicate primary discussions of a topic. *Italicized* page numbers indicate illustrations.

Symbols

- | (pipe), 92
- ~ (tilde character), as line continuation character, 105

A

- Actions pane, in DPM Management console, 64
- active/active clusters, 171, 202, 240
- Active Directory, 23
 - for DPM server, 39
 - extending from command line, **148–149**
 - extending with GUI, **145–147**
 - preparing, for DPM end-user recovery, **144–149**
 - protecting data in, 274
 - upgrading schema, **144–145**
- active node in failover cluster, 171, 202, 240
- active/passive clusters, 171, 202, 240
- Add (DMS cmdlet verb), 95
- Add-BackupNetworkAddress cmdlet, **105, 368**
- Add-ChildDatasource cmdlet (DMS), 102, **105–106**
- Add-DPMDisk cmdlet (DMS), **106**
- Add-Tape cmdlet (DMS), 100, **106**
- administrative group (AG), 23
- Agent Coordinator, 31
- aging, and tape failure, 8
- alerts
 - in DPM Management console, 69
 - options for, 66, 67
- aliases in PowerShell, 90
- AMD Opteron/Intel EMT64 architecture, 238–239
- application-level backup, of virtual machine, **312**
- Archive, marking tape as, 132
- archive tape, displaying dataset state, 110
- asynchronous replicas, 18, *18*, 377
- Automated System Restore backup sets, 7
- availability, of disk-based backups, 10

B

- backup administrators, design questions and compromises of, 4
- backup network, 368
 - displaying, 109
 - for DPM, 105
- backup procedures, 3–7
 - benefits in data protection, 20
 - centralized on mainframes, 3
 - design issues, 5–7
 - for Exchange servers, **204–215**
 - protection agent install, **204–215, 205, 206**
 - for file servers, **173–186**
 - clustered configurations, **182–186**
 - standalone configurations, **174–182**
 - for SharePoint server, **275–284**
 - database protection, **279–284, 280–285**
 - protection agent install, 276, 278
 - for SQL Server, **243–256**
 - database protection, **246–252**
 - database protection on cluster nodes, **254–256**
 - protection agent install for clustered configuration, 253
 - protection agent install for standalone application, 244, **244–246, 245**
 - third-party software, **31–32**
- bandwidth
 - for backup, 5
 - for copying SQL database to tape, 267
 - for database restore, 258
 - for Exchange restore, 220, 228
 - for file server restore process, 189, 191
 - for server protection over WAN, 369–370
 - for SharePoint data restore, 288, 292, 298, 299, 301
 - for SQL Server recovery, 262
 - to network folder, 263
 - for virtual machine recovery, 324
- baseline virtual machine, creating, **404–406**
- best practices
 - end-user recovery, **455–456**
 - Exchange Server, 457

- file servers, **456–457**
 - generic, **459–460**
 - installation and architecture, **453–454**
 - SharePoint server, **458**
 - SQL server, **458**
 - virtual server, **459**
 - Bitlocker, **337**
 - .bkf file format, **7**
 - block-level replicas, **19, 19, 377**
 - blocks, for data storage, **19**
 - brick-level backups, for Exchange data, **196**
 - budgetary constraints, in network deployment, **355**
 - byte-level replicas, **18, 18, 377**
- C**
- capacity, for backup, **5**
 - case sensitivity, in PowerShell, **89**
 - CCR (Continuous Clustered Replication), for Exchange 2007, **199**
 - CCR (Local Clustered Replication), for Exchange 2007, **199**
 - certificates for data encryption, **372**
 - importing in Windows, **373–374**
 - checklists
 - DPM configuration, **462–463**
 - DPM deployment and installation, **462**
 - DPM planning, **461–462**
 - DPM protection group, **463–464**
 - end-user recovery, **463**
 - wrap up, **464**
 - Choose Replica Creation Method screen, **58, 59**
 - Choose Restart Method screen, **206, 245, 277, 314, 339**
 - Cisco, **90**
 - Clean (DMS cmdlet verb), **95**
 - Clean-TapeDrive cmdlet (DMS), **100**
 - Cleaner, marking tape as, **132**
 - CLI XML, **94**
 - clickstream software, assumptions, **35**
 - client, for end-user recovery, deploying, **149–153**
 - Client Submission Port, **67**
 - cluster nodes, with installed protection agent, listing, **115**
 - cluster resources, **170, 201, 239**
 - types, **240**
 - clustered configurations
 - of Exchange servers, **200–201**
 - of file servers, **170**
 - resource protection, **184–186**
 - of SharePoint server, **273**
 - of SQL Server, **239–240**
 - clusters, **167**
 - for Exchange data, **196**
 - for Exchange mailbox servers, **423–427, 427–430**
 - installing protection agent, **183–184**
 - listing with DPM agent installed, **114**
 - for SQL databases, **436–445, 438–447**
 - types, **170–171, 201–202**
 - cmdlets in PowerShell, **90–91**
 - data as objects, **87**
 - file formats to convert data between, **94**
 - formatting output with page breaks, **99, 100**
 - objects, **96–98**
 - pipeline for, **92**
 - verbs, **95–96**
 - collections, in PowerShell, **93–94**
 - colors, for PowerShell, customizing, **91**
 - columns in SQL tables, **242**
 - command-line interface
 - extending Active Directory from, **148–149**
 - vs. graphical user interface (GUI), historical perspective, **86–87**
 - Windows and, **85**
 - “commit” shadow copy phase, **16**
 - component load-balancing clusters, **171, 201–202, 240**
 - Component Services MMC snap-in console, **278**
 - Computer Management screen, **407**
 - opening, **407**
 - computing, history, **331**
 - Configure Active Directory dialog box, **146, 146**
 - Connect (DMS cmdlet verb), **95**
 - Connect-DPMServer cmdlet (DMS), **106**
 - Connect-Server cmdlet (DMS), **103**
 - Consistency check job, **70**
 - starting, **133**
 - Content Management Server 2001, **270**
 - Continuous Clustered Replication (CCR), for Exchange 2007, **199**
 - continuous replicas, **17, 17**
 - converting data, between file formats, **94**
 - cooling issues, for disk-based backups, **11**
 - Copy (DMS cmdlet verb), **95**
 - Copy data tape job, **70**
 - Copy-DPMTapeData cmdlet (DMS), **100, 107**
 - copy to tape
 - for file server restore process, **192–194**
 - for SQL Server restore process, **266–267**

- for virtual machine restore process, 327–328
 - for workstation restore process, 352–353
 - costs of backup, 5, 11
 - disk-based, 10, 11
 - to tape, 8
 - Create New Protection Group Wizard
 - for Exchange data
 - Choose Replica Creation Method screen, 214, 214
 - Customize Protection Objective screen, 212, 213
 - Modify Disk Allocation screen, 211, 211
 - Modify Long-Term Backup Schedule screen, 212, 213
 - Optimize Performance screen, 210, 210
 - Review Disk Allocation screen, 211, 211
 - Select Data Protection Method screen, 209
 - Select Group Members screen, 208
 - Select Library and Tape Details screen, 212, 214
 - Specify Exchange Protection Options screen, 209
 - Specify Long-Term Protection Goals screen, 212, 212
 - Specify Short-Term Goals screen, 209, 210
 - Summary screen, 215, 215
 - Welcome screen, 207, 207
 - for file server
 - Review Disk Allocation screen, 179
 - Select Data Protection Method screen, 178, 178
 - Select Library and Tape Details screen, 180, 182
 - Select New Group Members screen, 177, 177
 - Specify Short-Term Goals screen, 178
 - Summary screen, 181, 183
 - Welcome screen, 177
 - for SharePoint farm
 - Choose Replica Creation Method screen, 284
 - Review Disk Allocation screen, 281
 - Select Data Protection Method screen, 280
 - Select Library and Tape Details screen, 284
 - Select Long-Term Goals screen, 282
 - Specify Short-Term Goals screen, 280
 - Summary screen, 284, 285
 - for SQL Server
 - Choose Replica Creation Method screen, 251, 252, 255
 - Review Disk Allocation screen, 249
 - Select Data Protection Method screen, 248
 - Select Group Members screen, 247, 254
 - Select Library and Tape Details screen, 251, 255
 - Select Long-Term Goals screen, 250
 - Specify Short-Term Goals screen, 248, 249
 - Summary screen, 252, 252, 255
 - Welcome screen, 247
 - for virtual machine
 - Choose Replica Creation Method screen, 321
 - Optimize Performance screen, 317
 - Review Disk Allocation screen, 318
 - Select Data Protection Method screen, 316
 - Select Group Members screen, 316
 - Select Library and Tape Details screen, 320
 - Select Long-Term Goals screen, 319
 - Specify Short-Term Goals screen, 317
 - Summary screen, 321
 - Welcome screen, 315
 - for workstations
 - Choose Replica Creation Method screen, 345, 346
 - Review Disk Allocation screen, 343
 - Select Data Protection Method screen, 341
 - Select Library and Tape Details screen, 345
 - Select New Group Members screen, 341
 - Specify Short-Term Goals screen, 342
 - Summary screen, 346, 346
 - Welcome screen, 340
 - CSV file format, 94
 - Customize Recovery Goal screen, 283
 - for SQL Server, 250, 250
 - for virtual machine, 319
 - for workstations, 344
- ## D
- D2D2T (disk to disk to tape), 12–13, 13
 - benefits in data protection, 20
 - DAS (Direct Attached Storage), 40
 - data assets, need for protecting, 2
 - data loss
 - as catastrophe, 1
 - from file locks, 15
 - hardware and, 165
 - data mirroring, 17

- data protection, 20
 - general concepts, 377–379
- Data Protection Manager (DPM). *See* System Center Data Protection Manager (DPM) 2007
- data protection method, of protection group, 24
- data protection strategies, priorities, 166
- data sources, 25
 - protection options for, 111, 128
 - recovering version to target location, 123
- data, value of, 1
- database replication, for Exchange data, 196
- database server farm, backup strategy, 4–5, 5
- databases
 - for DPM server, 42
 - in SharePoint, 275
 - in SQL Server, 243
 - protecting, 246–252
- Dataset copy job, 70
- datasets, listing incomplete on tape, 112
- DCOM protocol, 375
- dedicated Exchange 2007 bridgehead servers, 199
- default folders, for PowerShell, customizing, 91
- default gateway, 368
- default instances in SQL Server, 243
- default storage allocation, overriding, 60
- deployment completion, 356–366, 393–395. *See also* email notifications
 - disk partition sizing, 357–359
 - multi-forest and multi-domain considerations, 359–360
- Detailed inventory job, 70
- DFS (Distributed File System), 19
 - junction points, 169, 334
- DFS namespaces, data protection in, 169
- Digital Dashboard Starter Kit, 269
- DIR command, 87
- Direct Attached Storage (DAS), 40
- Disable (DMS cmdlet verb), 95
- Disable-DPMLibrary cmdlet (DMS), 100, 108
- Disable-TapeDrive cmdlet (DMS), 100, 108
- Disconnect (DMS cmdlet verb), 95
- Disconnect-DPMServer cmdlet (DMS), 108
- Disconnect-Server cmdlet (DMS), 103
- disk allocation, for protection group, 25
- disk backup, 9–11
 - benefits in data protection, 20
 - combining with tape, 12
 - vs. tape, 11–14
- Disk recovery job, 70
- disk space
 - allocation for protected data, 111
 - for DPM server program, 38
 - removing from storage pool, 125
- disk to disk to tape (D2D2T), 12–13, 13
 - benefits in data protection, 20
- Disk Utilization Report, 77, 77
- disk volume
 - adding to storage pool, 51, 51
 - directly attached, 40
 - on workstation, protecting, 335
- disks, listing found during scan, 112
- Dispose (DMS cmdlet verb), 95
- Dispose-DPMObject cmdlet (DMS), 103
- Distributed File System (DFS), 19
 - junction points, 169, 334
- distribution groups, 23
 - for email notifications, 357
- DMS (DPM Management Shell), 98, 98
- DNS protocol, 375
- DNS server, 368
- documentation, 63
 - for DPM, 36–37
- documents
 - recovering from Office 2003, 159, 159–160, 160
 - recovering from Office 2007, 161–163, 161–163
 - in SharePoint, 275
- dogfooding, 13
- Domain Admins security group, 144

 - DPM servers
 - installing, **44–50**
 - Customer Experience Improvement Program, **49**
 - licensing agreement, **44**
 - Microsoft Update enable decision, **48**
 - password for SQL service account, **48**
 - Prerequisites check, **45, 46**
 - SQL server instance selection, **47**
 - summary, **49**
 - user and company information, **46**
 - Welcome screen, **45**
 - report on, **77, 77**
 - requirements, **37–42**
 - database, **42**
 - hardware, **38**
 - software, **38–40**
 - storage, **40–42**
 - sharing with other applications, **39–40**
 - DPM SQL Server database, **366**
 - DPM SQL Server Reporting Services database, **366**
 - DPMAExtension.exe, **148**
 - DPMBackup.exe utility, **174, 366–367**
 - DPMDB2007.mdf file, **366**
 - DPMRecoveryWebApplication, **275**
 - Drive cleaning job, **70**
 - starting, **135–136**
 - dump files, **360**
 - filename for, **362**
 - dynamic disks, and iSCSI, **357**
- ## E
- Edge Transport servers, **199**
 - EFS (Encrypting File System), **337**
 - email, **195**
 - email notifications, **356–357**
 - for database restore, **258**
 - of SQL Server recovery, **262**
 - to tape, **267**
 - of virtual machine recovery, **324**
 - EMS (Exchange 2007 Management Shell), **98**
 - Enable (DMS cmdlet verb), **95**
 - Enable-DPMLibrary cmdlet (DMS), **100, 108**
 - Enable-TapeDrive cmdlet (DMS), **100, 109**
 - encrypted data, **370–372**
 - protecting, **337**
 - Encrypting File System (EFS), **337**
 - end-user recovery, **28–29, 383–384**
 - best practices, **455–456**
 - checklist, **463**
 - deploying client, **149–153**
 - using Group Policy, **151**
 - and DFS namespace, **169**
 - DPM, **142–143**
 - enabling, **143–153**
 - introducing, **139–143**
 - limitations, **154**
 - Windows, **141–142**
 - Enter Credentials screen, **205, 245, 277, 314, 339**
 - Enterprise License (E-DPML), for DPM, **37**
 - Erase (DMS cmdlet verb), **95**
 - Erase-Tape cmdlet (DMS), **101**
 - ESE (Extensible Storage Engine), **197**
 - ESEUTIL utility, **207**
 - Exchange data stores, component objects, **197**
 - Exchange Server, **454**
 - best practices, **457**
 - database recovery limitations, **226**
 - as domain controllers, impact, **203**
 - installing, **420–422, 420–422**
 - protection agent install, **204–215, 205, 206**
 - VSS for snapshot, **307–308**
 - Exchange Server 2003
 - administrative group (AG), **23**
 - front-end servers, **199**
 - routing group (RG), **24**

Exchange Server 2007

- Client Submission Port for, 67
- Hub Transport servers, 199
- Management Shell (EMS), 98
- PowerShell and administrative interface for, 87
- Exchange server protection, 386–387
 - backup and restore strategies, 195–196
 - backup procedures, 204–215
 - protection agent install, 204–215, 205, 206
 - considerations, 197–204
 - clustered configurations, 200–201
 - prerequisites, 199–200
 - protected data sources, 203–204
 - system state, 202–203
 - lab environment setup, 420–430
 - clustered configurations, 423–427, 427–430
 - standalone configurations, 420–422, 420–423
 - restore procedures, 215–221
 - copy to network folder, 228
 - individual mailbox, 229–233, 230
 - individual mailbox recovery to network folder, 232–233
 - individual mailbox recovery to tape, 233
 - mailbox or public folder database, 221–229
 - mailbox or public folder database to another database, 224–226, 225, 226
 - mailbox or public folder database to network folder, 228
 - mailbox or public folder database to original location, 223–224
 - mailbox or public folder database to recovery storage group, 226–228
 - mailbox or public folder database to tape, 229
 - to recovery storage group, 226–228
 - storage group restore to tape, 220, 221
 - storage group to alternate location, 218–220
 - storage group to original location, 216–218
 - server requirement, 43
- exclusive file locks, and backup, 14–15
- express full backup, 22
 - changing schedule for, 56, 57, 249, 249
- Extensible Storage Engine (ESE), 197

F

- failover clusters, 171, 201–202, 240
- familiarity, of disk technology, 10
- farm in SharePoint, 274–275

- Fast inventory job, 70
- FAT, DPM and, 42
- fault tolerance, RAID for, 358
- file exclusions, for workstation protection, 336
- file formats, to convert data between cmdlets, 94
- file-level replicas, 18, 19, 377
- file recovery, by users. *See* end-user recovery
- file server protection, 384–386
 - advanced technologies, 167
 - backup procedures, 173–186
 - clustered configurations, 182–186
 - standalone configurations, 174–182
 - best practices, 456–457
 - considerations, 167–173
 - clustered configurations, 170
 - prerequisites, 167–169
 - protected data sources, 172–173
 - system state, 171–172
 - lab environment setup, 406–419
 - clustered configurations, 412–419
 - standalone configurations, 406–411, 407–411
 - of resources, 176–182
 - restore procedures, 186–194
 - to alternate location, 190–192
 - copy to tape, 192–194
 - to original location, 186–189
 - server requirement, 43
- files
 - recovering, 154–156, 155–156
 - versioning, 167
- filesystem objects, displaying protectable, 109
- firewalls, 375
- folders
 - default, for PowerShell, customizing, 91
 - protecting, 172
 - recovering with Windows Explorer, 157–158, 157–159
 - on workstation, protecting, 335
- Format-List cmdlet, 93
- Format-Table cmdlet, 94
- Free, marking tape as, 132
- functions, for PowerShell, customizing, 91
