	<b>Notes</b>	245
	<b>Bibliography</b>	273
	<b>Index</b>	281
	<b>Colophon</b>	291

“The capitals of distant nations might be united by chains of posts, and, the settling of those disputes which at present take up months or years might then be accomplished in as many hours. An establishment of telegraphs might then be made like that of the post; and instead of being an expence, it would produce a revenue.”

*Encyclopaedia Britannica*, 1797, in the first entry on the telegraph.
