

CONTENTS

Preface	xiii
Acronyms	xvii
1 Stationary Processes	1
1.1 Fundamental Concepts	2
1.1.1 Stationarity	4
1.1.2 Singularity and Regularity	5
1.1.3 Wold Decomposition Theorem	5
1.1.4 Causality	7
1.1.5 Invertibility	7
1.1.6 Best Linear Predictor	8
1.1.7 Szegő-Kolmogorov Formula	8
1.1.8 Ergodicity	9
1.1.9 Martingales	11
1.1.10 Cumulants	12
1.1.11 Fractional Brownian Motion	12
1.1.12 Wavelets	14
	v

1.2	Bibliographic Notes	15
	Problems	16
2	State Space Systems	21
2.1	Introduction	22
2.1.1	Stability	22
2.1.2	Hankel Operator	22
2.1.3	Observability	23
2.1.4	Controllability	23
2.1.5	Minimality	24
2.2	Representations of Linear Processes	24
2.2.1	State Space Form to Wold Decomposition	24
2.2.2	Wold Decomposition to State Space Form	25
2.2.3	Hankel Operator to State Space Form	25
2.3	Estimation of the State	26
2.3.1	State Predictor	27
2.3.2	State Filter	27
2.3.3	State Smoother	27
2.3.4	Missing Observations	28
2.3.5	Steady State System	28
2.3.6	Prediction of Future Observations	30
2.4	Extensions	32
2.5	Bibliographic Notes	32
	Problems	33
3	Long-Memory Processes	39
3.1	Defining Long Memory	40
3.1.1	Alternative Definitions	41
3.1.2	Extensions	43
3.2	ARFIMA Processes	43
3.2.1	Stationarity, Causality, and Invertibility	44
3.2.2	Infinite AR and MA Expansions	46
3.2.3	Spectral Density	47
3.2.4	Autocovariance Function	47
3.2.5	Sample Mean	48
3.2.6	Partial Autocorrelations	49
3.2.7	Illustrations	49
3.2.8	Approximation of Long-Memory Processes	55

3.3	Fractional Gaussian Noise	56
3.3.1	Sample Mean	56
3.4	Technical Lemmas	57
3.5	Bibliographic Notes	58
	Problems	59
4	Estimation Methods	65
4.1	Maximum-Likelihood Estimation	66
4.1.1	Cholesky Decomposition Method	66
4.1.2	Durbin-Levinson Algorithm	66
4.1.3	Computation of Autocovariances	67
4.1.4	State Space Approach	69
4.2	Autoregressive Approximations	71
4.2.1	Haslett-Raftery Method	72
4.2.2	Beran Approach	73
4.2.3	A State Space Method	74
4.3	Moving-Average Approximations	75
4.4	Whittle Estimation	78
4.4.1	Other versions	80
4.4.2	Non-Gaussian Data	80
4.4.3	Semiparametric Methods	81
4.5	Other Methods	81
4.5.1	A Regression Method	82
4.5.2	Rescaled Range Method	83
4.5.3	Variance Plots	85
4.5.4	Detrended Fluctuation Analysis	87
4.5.5	A Wavelet-Based Method	91
4.6	Numerical Experiments	92
4.7	Bibliographic Notes	93
	Problems	94
5	Asymptotic Theory	97
5.1	Notation and Definitions	98
5.2	Theorems	99
5.2.1	Consistency	99
5.2.2	Central Limit Theorem	101
5.2.3	Efficiency	104
5.3	Examples	104

5.4	Illustration	108
5.5	Technical Lemmas	109
5.6	Bibliographic Notes	109
	Problems	109
6	Heteroskedastic Models	115
6.1	Introduction	116
6.2	ARFIMA-GARCH Model	117
	6.2.1 Estimation	119
6.3	Other Models	119
	6.3.1 Estimation	121
6.4	Stochastic Volatility	121
	6.4.1 Estimation	122
6.5	Numerical Experiments	122
6.6	Application	123
	6.6.1 Model without Leverage	123
	6.6.2 Model with Leverage	124
	6.6.3 Model Comparison	124
6.7	Bibliographic Notes	125
	Problems	126
7	Transformations	131
7.1	Transformations of Gaussian Processes	132
7.2	Autocorrelation of Squares	134
7.3	Asymptotic Behavior	136
7.4	Illustrations	138
7.5	Bibliographic Notes	142
	Problems	143
8	Bayesian Methods	147
8.1	Bayesian Modeling	148
8.2	Markov Chain Monte Carlo Methods	149
	8.2.1 Metropolis-Hastings Algorithm	149
	8.2.2 Gibbs Sampler	150
	8.2.3 Overdispersed Distributions	152
8.3	Monitoring Convergence	153
8.4	A Simulated Example	155

8.5	Data Application	158
8.6	Bibliographic Notes	162
	Problems	162
9	Prediction	167
9.1	One-Step Ahead Predictors	168
	9.1.1 Infinite Past	168
	9.1.2 Finite Past	168
	9.1.3 An Approximate Predictor	172
9.2	Multistep Ahead Predictors	173
	9.2.1 Infinite Past	173
	9.2.2 Finite Past	174
9.3	Heteroskedastic Models	175
	9.3.1 Prediction of Volatility	176
9.4	Illustration	178
9.5	Rational Approximations	180
	9.5.1 Illustration	182
9.6	Bibliographic Notes	184
	Problems	184
10	Regression	187
10.1	Linear Regression Model	188
	10.1.1 Grenander Conditions	188
10.2	Properties of the LSE	191
	10.2.1 Consistency	192
	10.2.2 Asymptotic Variance	193
	10.2.3 Asymptotic Normality	193
10.3	Properties of the BLUE	194
	10.3.1 Efficiency of the LSE Relative to the BLUE	195
10.4	Estimation of the Mean	198
	10.4.1 Consistency	198
	10.4.2 Asymptotic Variance	199
	10.4.3 Normality	200
	10.4.4 Relative Efficiency	200
10.5	Polynomial Trend	202
	10.5.1 Consistency	203
	10.5.2 Asymptotic Variance	203
	10.5.3 Normality	204

10.5.4	Relative Efficiency	204
10.6	Harmonic Regression	205
10.6.1	Consistency	205
10.6.2	Asymptotic Variance	205
10.6.3	Normality	205
10.6.4	Efficiency	206
10.7	Illustration: Air Pollution Data	207
10.8	Bibliographic Notes	210
	Problems	211
11	Missing Data	215
11.1	Motivation	216
11.2	Likelihood Function with Incomplete Data	217
11.2.1	Integration	217
11.2.2	Maximization	218
11.2.3	Calculation of the Likelihood Function	219
11.2.4	Kalman Filter with Missing Observations	219
11.3	Effects of Missing Values on ML Estimates	221
11.3.1	Monte Carlo Experiments	222
11.4	Effects of Missing Values on Prediction	223
11.5	Illustrations	227
11.6	Interpolation of Missing Data	229
11.6.1	Bayesian Imputation	234
11.6.2	A Simulated Example	235
11.7	Bibliographic Notes	239
	Problems	239
12	Seasonality	245
12.1	A Long-Memory Seasonal Model	246
12.2	Calculation of the Asymptotic Variance	250
12.3	Autocovariance Function	252
12.4	Monte Carlo Studies	254
12.5	Illustration	258
12.6	Bibliographic Notes	260
	Problems	261
