Notes to the Teacher	xvii

Section 1: Number, Operation, and Quantitative Reasoning 1

Objectives

1. Compare and order fractions, decimals (including tenths and hundredths), and percents, and find their approximate locations on a number line	1
2. Multiply decimals to solve word problems	12
3. Divide decimals to solve word problems	26
4. Estimate solutions to multistep word problems by rounding with decimals	44
5. Add fractions or mixed numbers to solve word problems	55
6. Subtract fractions or mixed numbers to solve word problems	69
7. Divide fractions or mixed numbers to solve word problems	82
8. Multiply fractions or mixed numbers to solve word problems	97
9. Develop and apply scientific notation to solve word problems	113
Practice Test	123

Section 2: Proportional and Algebraic Reasoning. 129

Objectives

1. Apply ratios in proportional relationships involving unit rates, scale factors, probabilities, or percents	129
2. Add integers to solve word problems	142
3. Subtract integers to solve word problems	151

4. Multiply and divide integers to solve word problems	161
5. Model situations with linear equations of the form: $aX + b = c$, where a , b , and c are integers or decimals and X is an integer	171
6. Identify linear and nonlinear functions and contrast their properties using tables, graphs, or equations	179
Practice Test	189

Section 3: Geometry, Spatial Reasoning, and Measurement. 193

Objectives

1. Sketch side views (orthogonal views) of solids and identify different perspectives of solids that satisfy the side views	193
2. Identify or graph reflections (flips), rotations (turns), and translations (slides) on a coordinate plane	203
3. Use dilations to generate similar two-dimensional shapes, and compare their side lengths, angles, and perimeters; find missing measurements using proportional relationships . . .	214
4. Model and apply the Pythagorean theorem to solve real-life problems	222
5. Generate the formulas for the circumference and the area of a circle; apply the formulas to solve word problems	231
6. Generate and apply the area formula for a parallelogram (including rectangles); extend to the area of a triangle	240
7. Generate and apply the area formula for a trapezoid	249
8. Apply nets and concrete models to find total or partial surface areas of prisms and cylinders	258
9. Find the volume of a right rectangular prism, or find a missing dimension of the prism; find the new volume when the dimensions of a prism are changed proportionally	266
Practice Test	275

Section 4: Graphing, Statistics, and Probability 281

Objectives

1. Locate and name points using ordered pairs of rational numbers or integers on a Cartesian coordinate plane	281
2. Construct and interpret circle graphs	290

3. Compare different numerical or graphical models for the same data, including histograms, circle graphs, stem-and-leaf plots, box plots, and scatter plots; compare two sets of data by comparing their graphs of similar type 301

4. Find the mean of a given set of data, using different representations such as tables or bar graphs 312

5. Find the probability of a simple event and its complement 321

6. Find the probability of a compound event (dependent or independent) 327

Practice Test 336
