

Contents

<i>Introduction</i>	<i>xvii</i>
Part 1 • Using IIS 7	1
Chapter 1 • Working with the New Interface	3
Defining Microsoft's New Approach to IIS Management	3
Administrators and Developers Work Together	4
An Emphasis on ASP.NET	5
Obtaining and Installing SQL Server Express	6
Using the Drill-Down Approach	11
Using Features View versus Contents View	16
Displaying Features and Content in Order	17
Working with the Actions Pane	18
Understanding Friendly Names and Configuration Names	20
Let's Start Building	21
Chapter 2 • Configuring IIS 7 Features	23
Understanding the New Icons	23
ASP.NET	23
IIS	31
Management	40
Choosing the Configuration Level	41
Web Server	41
Web Site	45
Folder	47
Application	47
Let's Start Building	47
Chapter 3 • Working with Files	49
Browsing and Exploring	49
Working with Web Sites	50
Working with Files	52
Setting a Default Document	52
Controlling the Use of Directory Browsing	54
Setting the MIME Type	55
Understanding the Basic MIME Types	56
Associating a MIME Type with an Application	58
Editing and Deleting MIME Types	61
Working with Handlers	61
Understanding Handler Functionality	61
Enabling and Disabling Handlers	63
Adding a Managed Handler	64

Adding a Script Map	65
Adding a Module Mapping	66
Editing Handler Settings	67
Renaming Handlers	67
Removing Handlers	67
Changing Handler Restrictions	67
Adding Virtual Directories to the Web Site	68
Creating a Virtual Directory	69
Viewing Virtual Directories	69
Defining Default Virtual Directory Settings	70
Let's Start Building	71
Part 2 • Configuring Older Applications	73
Chapter 4 • Working with Basic HTML	75
Working with Basic HTML Pages in IIS 7	76
Moving Existing HTML Pages to IIS 7	77
Moving Your Files with XCopy	77
Considering Security Issues	80
Defining the IIS Setup for HTML	84
Managing Error Pages	85
Understanding Status Codes in IIS	85
Adding a New Error Page	86
Editing an Existing Error Page	88
Removing an Error Page	88
Changing a Status Code	88
Editing the Feature Settings	89
Setting Failed Request Tracing Rules	90
Enabling and Disabling Tracing Rules	90
Creating a Tracing Rule	92
Editing a Tracing Rule	95
Removing a Tracing Rule	95
Working with Response Modules	95
Adding a Native Module	96
Adding a Managed Module	97
Editing Module Settings	98
Removing a Module	98
Changing a Module Priority	98
Let's Start Building	98
Chapter 5 • Working with ASP	101
Working with ASP Pages in IIS 7	101
Considering ASP Limitations	101
Considering Security Issues	102
Defining the IIS Setup for ASP	104
Working with Server Side Includes (SSI)	104
Setting the ASP Configuration	106
Changing the Application Behavior	106

Compiling the Application	109
Configuring Application Services	111
Moving an ASP Application to IIS 7	116
Let's Start Building	117
Chapter 6 • Working with Other Application Types	119
Working with CGI Applications	119
Working with ISAPI Extensions	120
Managing ISAPI Filters	121
Understanding ISAPI Filters	121
Adding ISAPI Filters	123
Editing ISAPI Filter Settings	124
Removing an ISAPI Filter	124
Renaming an ISAPI Filter Entry	124
Managing ISAPI Extension and CGI Restrictions	124
Changing the Feature Settings	125
Adding a Restriction	126
Denying or Allowing a Restriction	126
Editing a Restriction	126
Removing a Restriction	127
Configuring SMTP Email	127
Configuring an SMTP Server	128
Configuring a Pickup Directory	128
Working with Non-Microsoft Alternatives	129
Working with PHP	129
Working with PERL	130
Working with Python	131
Working with JSP	132
Working with Ruby	133
Working with ColdFusion	133
Working with PERL.NET and IronPython	134
Let's Start Building	134
Chapter 7 • Using the Internet Information Services 6.0 Manager	137
Working with FTP Sites	138
Understanding FTP Site Prerequisites	138
Managing an FTP Server with the Graphical Interface	140
Managing FTP Servers with the FTP Utility	145
Setting Security for Your FTP Site	146
Connecting to Other Servers	149
Performing Common Tasks with IIS Versions 6.0 and Below	150
Working with Application Pools	150
Modifying Web Site Settings	154
Working with Folders	161
Working with Virtual Directories	162
Modifying Individual File Settings	164
Let's Start Building	164

Part 3 • Configuring Application Security 165**Chapter 8 • Basic Application Setup 167**

Creating Applications	167
Adding a New Application	168
Converting a Folder or Virtual Directory to an Application	169
Controlling Application Settings	169
Working with Developers to Define Application Settings	170
Changing Application Behavior with Application Settings	170
Exploring and Browsing Applications	171
Managing Session State	172
Understanding How Session State Works	173
Changing the Session State Mode	174
Controlling the Use of Cookies	176
Considering Impersonation Requirements	177
Modifying Application Settings	178
Changing the Basic Settings	178
Changing the Advanced Settings	178
Managing Worker Processes	179
Working with the AppCmd Utility	180
Using the <i>SITE</i> Object	181
Using the <i>APP</i> Object	182
Using the <i>VDIR</i> Object	183
Using the <i>APPPPOOL</i> Object	184
Using the <i>CONFIG</i> Object	185
Using the <i>WP</i> Object	187
Using the <i>REQUEST</i> Object	187
Using the <i>MODULE</i> Object	188
Using the <i>BACKUP</i> Object	189
Using the <i>TRACE</i> Object	189
Let's Start Building	190

Chapter 9 • Understanding the .NET Security Model 193

Considering Operating System Security	194
A Detailed View of Windows Security	194
Using the Access Control Editor	198
Using the Security Configuration Editor	198
Configuring Local Security Policies with the SecEdit Utility	203
Understanding Role-Based Security	204
An Overview of .NET Framework Security Features	205
Defining Membership and Evidence	206
Understanding Permissions	207
Using the Permissions Calculator Utility	207
Understanding Principal and Identity Objects	211
Understanding Code-Based Security	212
Why Use Code-Based Security?	212
When to Use Code- or Role-Based Security	213
Using the Code Access Security Policy Tool	213

Using the Microsoft .NET Framework 2.0 Configuration Console	219
Working with Code Groups	219
Creating and Defining Permission Sets	221
Defining Policy Assemblies	221
Adding Configured Applications	222
Let's Start Building	222
Chapter 10 • Configuring Application Security	223
Setting Authentication Requirements	224
Considering the Authentication Types	224
Enabling and Disabling an Authentication Type	228
Understanding the Response Types	228
Modifying the Authorization Rules	229
Understanding the Difference between Authorization and Security	229
Understanding Allow and Deny Rules	232
Adding Allow or Deny Rules	233
Editing Existing Allow or Deny Rules	234
Removing an Allow or Deny Rule	234
Working with Server Certificates	234
Importing an Existing Certificate	235
Creating a Certificate Request	236
Completing a Certificate Request	238
Creating a Domain Certificate	238
Creating a Self-Signed Certificate	241
Configuring an Application to Use SSL	242
Creating an HTTPS Binding	242
Defining the Server Settings	243
Defining the Client Settings	244
Managing .NET Users	245
Adding Users	246
Editing Users	247
Removing Users	248
Setting Role-Based Security Using .NET Roles	248
Setting Code-Based Security Using .NET Trust Levels	249
Storing User Settings with the .NET Profile	251
Adding a Global Property	252
Adding a Group	252
Adding a Group Property	252
Removing Groups or Properties	253
Editing Properties	253
Renaming Properties	253
Let's Start Building	253
Chapter 11 • Defining Database Connectivity	255
Understanding Database Connectivity Requirements	256
Managing Providers	257
Understanding the Purpose of a Provider	258
Viewing Connections Associated with a Provider	259

Adding New Providers	259
Editing Existing Providers	263
Removing Unneeded Providers	263
Considering the Elements of a Connection String	263
Understanding the <i>Web.CONFIG</i> Entries	263
Understanding the Attributes	264
Working with the Connection String	266
Managing Connection Strings	267
Adding a New Connection String	267
Editing Existing Connection Strings	269
Renaming Connection Strings	269
Removing Connection Strings	270
Considering Security Issues for Database Connections	270
Encrypt the Data	270
Install All Required Patches and Updates	271
Use Middleware When Possible	272
Rely on Proper Security	272
Test Your System	272
Keep the Databases Small	273
Interrogate the User	273
Don't Break Integrity	273
Let's Start Building	274
Chapter 12 • Modifying the Application Configuration Files	275
Understanding the <i>Web.CONFIG</i> File	275
Understanding Hierarchy	276
Using XML Notepad to Modify <i>Web.CONFIG</i>	276
An Overview of the <i>Web.CONFIG</i> Elements	280
Changing Security Settings	282
Denying Access to a Particular File	283
Changing the Security Policies	284
Changing Application Settings	288
Working with the <i>ApplicationHost.CONFIG</i> File	288
Working with the <i>Administration.CONFIG</i> File	289
Performing Configuration Tasks without the GUI	290
Using the W3WP Utility	291
Command Line Switches for the Graphical Utility	291
Performing Configuration with the <i>ADSUtil.VBS</i> Script	294
Let's Start Building	298
Chapter 13 • Improving Application Performance	299
Understanding the Performance Triangle	299
Balancing Security, Reliability, and Speed	300
Considering the Effects of Too Much Speed	303
Working with Application Pools	304
Understanding the Purpose of Application Pools	304
An Overview of the Default Application Pools	304
Setting the Application Pool Defaults	306

Creating New Application Pools	311
Setting the Basic Application Pool Configuration	312
Setting the Advanced Application Pool Configuration	312
Changing the Application Pool Recycling Interval	312
Viewing the Applications Associated with an Application Pool	312
Removing an Application Pool	313
Implementing Performance Monitoring	313
Defining Application Behavior Using Pages and Controls	315
Configuring the Pages and Controls Behavior Options	316
Configuring the Pages and Controls Compilation Options	316
Configuring the Pages and Controls General Options	316
Configuring the Pages and Controls Services Options	316
Considering Feature Delegation	317
Let's Start Building	318
Chapter 14 • Considering Globalization	321
Considering Globalization Requirements for Your Organization	321
Understanding the Limitations of Globalization in IIS	324
Choosing Appropriate Culture Settings	325
Understanding the Use of Encoding	326
Changing the .NET Globalization Settings	327
Changing the Culture Settings	328
Changing the Encoding Settings	329
Let's Start Building	331
Glossary	333
<i>Index</i>	353
