<i>Preface</i>	xiii
1 Creating and formulating flavours	1
John Wright	
1.1 Introduction	1
1.1.1 A little history	1
1.2 Interpreting analyses	2
1.3 Flavour characteristics	3
1.3.1 Primary characters	3
1.3.2 Secondary characteristics	4
1.3.3 Taste effects	5
1.3.4 Complexity	6
1.3.5 Flavour balance	6
1.3.6 Unfinished work	7
1.4 Applications	8
1.4.1 Ingredient factors	8
1.4.2 Processing factors	10
1.4.3 Storage factors	10
1.4.4 Consumption factors	11
1.5 Flavour forms	11
1.5.1 Water-soluble liquid flavours	11
1.5.2 Clear water-soluble liquid flavours	12
1.5.3 Oil-soluble liquid flavours	13
1.5.4 Emulsion-based flavours	13
1.5.5 Dispersed flavours	13
1.5.6 Spray-dried flavours	14
1.6 Production issues	15
1.7 Regulatory affairs	16
1.8 A typical flavour	16
1.9 Commercial considerations	19
1.9.1 International tastes	19
1.9.2 Abstract flavours	20
1.9.3 Matching	21
1.9.4 Customers	22
1.10 Summary	22
References	23

iv Contents

2 Flavour legislation	24
Jack Knights	
2.1 Introduction	24
2.2 Methods of legislation	24
2.3 Legislation in the United States	26
2.4 International situation: JECFA	27
2.5 Council of Europe	28
2.6 European community	30
2.6.1 Background – national to EU legislation	30
2.6.2 The 1988 Council Directive	31
2.6.3 Smoke flavourings 2003 Directive	40
2.6.4 Developments 2008 onwards	41
2.7 Current EU Situation and the future	47
References	48
3 Basic chemistry and process conditions for reaction flavours with particular focus on Maillard-type reactions	51
Josef Kerler, Chris Winkel, Tomas Davidek and Imre Blank	
3.1 Introduction	51
3.2 General aspects of the Maillard reaction cascade	51
3.2.1 Intermediates as flavour precursors	54
3.2.2 Carbohydrate fragmentation	58
3.2.3 Strecker degradation	61
3.2.4 Interactions with lipids	62
3.3 Important aroma compounds derived from Maillard reaction in food and process flavours	65
3.3.1 Character-impact compounds of thermally treated foods	65
3.3.2 Character-impact compounds of process flavours	70
3.4 Preparation of process flavours	74
3.4.1 General aspects	74
3.4.2 Factors influencing flavour formation	74
3.4.3 Savoury process flavours	78
3.4.4 Sweet process flavours	80
3.5 Outlook	80
References	81
4 Biotechnological flavour generation	89
Ralf G. Berger, Ulrich Krings and Holger Zorn	
4.1 Introduction	89
4.2 Natural flavours: market situation and driving forces	89
4.3 Advantages of biocatalysis	90
4.4 Micro-organisms	91
4.4.1 Biotransformation and bioconversion of monoterpenes	91
4.4.2 Bioconversion of C ₁₃ -norisoprenoids and sesquiterpenes	95
4.4.3 Generation of oxygen heterocycles	96

4.4.4	Generation of vanillin, benzaldehyde and benzoic compounds	97
4.4.5	Generation of miscellaneous compounds	99
4.5	Enzyme technology	101
4.5.1	Liberation of volatiles from bound precursors	101
4.5.2	Biotransformations	101
4.5.3	Kinetic resolution of racemates	103
4.6	Plant catalysts	104
4.6.1	Plant cell, tissue and organ cultures	104
4.6.2	Callus and suspension cultures	105
4.6.3	Organ cultures	105
4.6.4	Plant cell biotransformations	107
4.7	Flavours through genetic engineering	107
4.7.1	Genetically modified micro-organisms	108
4.7.2	Isolated enzymes from genetically modified micro-organisms	109
4.7.3	Plant rDNA techniques	110
4.8	Advances in bioprocessing	112
4.8.1	Process developments in microbial and enzyme systems	112
4.8.2	Process developments of plant catalysts	114
4.9	Conclusion	114
	References	115
5	Natural sources of flavours	127
	Peter S.J. Cheetham	
5.1	Introduction	127
5.2	Properties of flavour molecules	129
5.2.1	Flavour perception	129
5.2.2	Differences in sensory character and intensity between isomers	141
5.2.3	Extraction of flavours from plant materials	142
5.2.4	Commercial aspects	146
5.2.5	Economic aspects	147
5.2.6	Safety aspects	147
5.3	Dairy flavours	147
5.3.1	Background	147
5.3.2	Cream and butter	148
5.3.3	Cheese	149
5.4	Fermented products	151
5.4.1	Hydrolysed vegetable proteins	151
5.4.2	Chocolate	152
5.4.3	Tea	153
5.4.4	Coffee	154
5.4.5	Beer	154
5.4.6	Wine	156
5.4.7	Sweeteners	158
5.5	Cereal products	158

vi Contents

5.6	Vegetable sources of flavour	159
5.6.1	Spice flavours	159
5.6.2	Mushroom	161
5.6.3	Garlic, onion and related flavours	161
5.6.4	Brassica flavours, including mustard and horseradish	163
5.6.5	'Fresh/green/grassy'	164
5.6.6	Nuts	164
5.6.7	Other vegetables	165
5.6.8	Fermented vegetables	165
5.7	Fruit	165
5.7.1	Apples	166
5.7.2	Pears	167
5.7.3	Grapefruit	167
5.7.4	Blackcurrant	167
5.7.5	Raspberry	168
5.7.6	Strawberry	168
5.7.7	Apricot and peach	169
5.7.8	Tomato	169
5.7.9	Cherry	169
5.7.10	Tropical fruit flavours	170
5.7.11	Vanilla	170
5.7.12	Other fruits	171
5.7.13	Citrus	171
5.7.14	Citrus processing	172
5.8	Other flavour characteristics	174
5.9	Fragrance uses	174
5.10	Conclusion	175
	References	175
6	Useful principles to predict the performance of polymeric flavour delivery systems	178
	Daniel Benczédi	
6.1	Overview	178
6.2	Introduction	178
6.3	Compatibility and cohesion	179
6.4	Sorption and swelling	182
6.5	Diffusion and release	184
	References	187
7	Delivery of flavours from food matrices	190
	Saskia M. van Ruth and Jacques P. Roozen	
7.1	Introduction	190
7.2	Flavour properties	191
7.3	Thermodynamic aspects of flavour delivery	191
7.3.1	Definition of gas/product partition coefficients and activity coefficients	191
7.3.2	Types of binding	193

7.3.3	Lipid–flavour interactions	194
7.3.4	Carbohydrate–flavour interactions	195
7.3.5	Protein–flavour interactions	196
7.4	Kinetic aspects of flavour delivery	197
7.4.1	Principles of interfacial mass transfer	198
7.4.2	Liquid food products	200
7.4.3	Semi-solid food products	200
7.4.4	Solid food products	201
7.5	Delivery systems: food technology applications	202
7.6	Conclusions	203
	References	203
8	Modelling flavour release	207
	Robert S. T. Linforth	
8.1	Introduction	207
8.2	Equilibrium partition models	208
8.2.1	The air/water partition coefficient	208
8.2.2	Estimation of K_{aw} using QSPR	209
8.2.3	Effect of lipid on volatile partitioning	211
8.2.4	QSPR estimation of the air/emulsion partition coefficient	212
8.2.5	Internet models and databases	213
8.3	Dynamic systems	214
8.3.1	Modelling flavour release from a retronasal aroma simulator	214
8.3.2	Non-equilibrium partition modelling of volatile loss from matrices	215
8.3.3	Modelling the gas-phase dilution of equilibrium headspace	216
8.3.4	Modelling the gas-phase dilution of equilibrium headspace above emulsions	218
8.3.5	Modelling the rate of volatile equilibration in the headspace above emulsions	219
8.4	In vivo consumption	220
8.4.1	Modelling release from emulsions during consumption	222
8.4.2	Effect of gas flow on volatile equilibration above emulsions	222
8.4.3	Modelling volatile transfer through the upper airway	223
8.4.4	Non-equilibrium partition model for in vivo release	223
8.4.5	Modelling flavour release using time–intensity data	224
8.4.6	QSPR of in vivo volatile release from gels	224
8.5	Conclusion	226
	References	227
9	Instrumental methods of analysis	229
	Gary Reineccius	
9.1	Analytical challenges	229
9.2	Aroma isolation	231
9.2.1	Aroma isolation methods based on volatility	231

viii Contents

9.2.2	Aroma isolation methods using solvent extraction	237
9.2.3	Solid-phase micro-extraction	238
9.2.4	General considerations in preparing aroma isolates	241
9.2.5	Aroma isolation summary	241
9.3	Selection of aroma isolation method	242
9.3.1	‘Complete’ aroma profile	242
9.3.2	Key components contributing to sensory properties	243
9.3.3	Off-notes in a food product	243
9.3.4	Monitoring aroma changes in foods	244
9.3.5	Using aroma compound profiles to predict sensory response	244
9.3.6	Summary comments on isolation methods	245
9.4	Aroma isolate fractionation prior to analysis	245
9.4.1	Fractionation of concentrates prior to analysis	245
9.5	Flavour analysis by gas chromatography	249
9.5.1	High-resolution gas chromatography	249
9.5.2	Gas chromatography–olfactometry	250
9.5.3	Specific gas chromatographic detectors	254
9.6	Flavour analysis by HPLC	254
9.7	Identification of volatile flavours	255
9.7.1	Gas chromatography	255
9.7.2	Infrared spectroscopy	256
9.7.3	Mass spectrometry	257
9.8	Electronic ‘noses’	261
9.9	Summary	262
	References	262
10	On-line monitoring of flavour processes	266
	Andrew J. Taylor and Robert S.T. Linforth	
10.1	Introduction	266
10.2	Issues associated with in vivo monitoring of flavour release	268
10.2.1	Speed of analysis	268
10.2.2	Analysis of different chemical classes	268
10.2.3	Sensitivity	269
10.2.4	Identification of analysed compounds	270
10.2.5	Interfering factors	270
10.2.6	Non-volatile tastants	270
10.3	Pioneers and development of on-line flavour analysis	271
10.4	On-line aroma analysis using chemical ionisation techniques	272
10.4.1	Analysis via atmospheric pressure chemical ionisation	272
10.4.2	Analysis via PTR	275
10.4.3	Analysis via selected ion flow tube	275
10.4.4	Calibration	276
10.4.5	Suppression	277
10.4.6	Assigning ions to compounds for unequivocal identification	277
10.4.7	Summary	279

10.5	Analysis of tastants using direct mass spectrometry	279
10.6	Applications	280
10.6.1	Breath-by-breath analysis	281
10.6.2	Flavour reformulation in reduced fat foods	283
10.6.3	Flavour release in viscous foods	285
10.6.4	Measuring aroma release in ethanolic beverages	285
10.6.5	Monitoring flavour generation on-line	286
10.6.6	Rapid headspace profiling of fruits and vegetables	289
10.7	Future	290
	References	290
