Preface	xi
Acknowledgements	xiii
Abbreviations	xv
1 Introduction	1
1.1 History	1
1.2 Justification	2
1.3 Remarks on the concept	4
1.4 Standards structure	9
2 Functional modeling	11
2.1 Functional architecture of transport networks	11
2.2 Functional model requirements	14
2.3 Functional model basic structure	15
2.3.1 Architectural components	15
2.3.2 Topological components	20
2.4 Functional model detailed structure	22
2.4.1 Transport entities	22
2.4.2 Transport processing functions	27
2.4.3 Reference points	32
2.4.4 Components comparison	35
2.5 Client/server relationship	36
2.5.1 Multiplexing	38
2.5.2 Inverse multiplexing	39
2.6 Layer network interworking	41
2.7 Linking the functional model and the information model	43

2.8	Application of concepts to network topologies and structures.	45
2.8.1	PDH supported on SDH layer networks	45
2.8.2	Inverse multiplexing transport.	48
3	Partitioning and layering.	49
3.1	Layering concept	49
3.2	Partitioning concept	51
3.2.1	Sub-network partitioning.	51
3.2.2	Flow domain partitioning	55
3.2.3	Link partitioning	56
3.2.4	Access group partitioning	58
3.3	Concept applications	59
3.3.1	Application of the layering concept.	59
3.3.2	Application of the partitioning concept.	59
4	Expansion and reduction.	61
4.1	Expansion of layer networks	61
4.1.1	Expansion of the path layer network.	62
4.1.2	Expansion of the transmission media layer	62
4.1.3	Expansion of specific layer networks into sublayers	63
4.2	General principles of expansion of layers.	64
4.2.1	Adaptation expansion	64
4.2.2	Trail termination expansion.	65
4.2.3	Connection point expansion	65
4.3	Reduction of detail.	66
5	Adaptation functions.	69
5.1	Generic adaptation function	69
5.2	Adaptation function examples	76
5.2.1	The Sn/Sm_A function	76
5.2.2	The OCh/RSn_A function	83
5.2.3	The LCAS capable Sn-X-L/ETH_A function.	88
5.2.4	GFP mapping in the Sn-X/<client>_A function	96
6	Trail termination functions	99
6.1	Generic trail termination function.	99
6.2	Trail termination function examples.	105
6.2.1	The Sn_TT function	105

- 6.2.2 The OCh_TT function 112
- 6.2.3 The ETH_FT function 117
- 7 Connection functions. 123**
 - 7.1 Generic connection function 123
 - 7.2 Connection function example 127
 - 7.2.1 VC-n layer connection function Sn_C 127
 - 7.2.2 ETH flow domain 134
 - 7.3 Connection matrix examples 135
 - 7.3.1 Connection matrix example for full connectivity 135
 - 7.3.2 Connection matrix example for two groups. 137
 - 7.3.3 Connection matrix example for three groups. 138
- 8 Connection supervision. 143**
 - 8.1 Quality of Service. 143
 - 8.2 Connection monitoring methods 144
 - 8.2.1 Inherent monitoring. 145
 - 8.2.2 Non-intrusive monitoring 145
 - 8.2.3 Intrusive monitoring 147
 - 8.2.4 Sublayer monitoring 148
 - 8.3 Connection monitoring applications. 149
 - 8.3.1 Monitoring of unused connections. 150
 - 8.3.2 Tandem connection monitoring 151
- 9 Protection models 155**
 - 9.1 Introduction 155
 - 9.2 Protection 159
 - 9.2.1 Trail protection 160
 - 9.2.2 Sub-network connection protection 171
- 10 Compound functional models and their decomposition. 179**
 - 10.1 LCAS disabled VCAT functions 179
 - 10.1.1 Sn-Xv trail termination function 181
 - 10.1.2 Sn-Xv/Sn-X adaptation function. 183
 - 10.1.3 Sn-X trail termination function 189
 - 10.1.4 Sn trail termination function 192
 - 10.2 LCAS-capable VCAT functions. 193
 - 10.2.1 Sn-Xv-L layer trail termination function. 193
 - 10.2.2 Sn-Xv/Sn-X-L adaptation function. 194
 - 10.2.3 Sn-X-L trail termination function 200

10.2.4	Sn trail termination function	204
10.2.5	Sn-X-L to client signal adaptation function.	204
10.3	VCAT network model	207
10.4	S4-Xc to S4-Xc interworking function	208
10.5	VCAT-CCAT interworking network model	216
11	Example functional models to exercise	219
11.1	Device level functional model	219
11.2	Equipment detailed functional model.	221
11.3	Network element functional model	225
11.4	Trail connection model.	233
11.5	Synchronization network model.	240
11.5.1	Synchronization methods.	240
11.5.2	Synchronization network architecture	241
11.6	OTN network element model.	244
11.7	Data transport model	246
11.7.1	Equipment models for GFP	246
11.7.2	Ethernet tributary port.	248
11.7.3	IP router port.	250
11.7.4	SAN tributary port	250
11.8	Ethernet layer network model	251
11.8.1	ETY layer network terminology.	251
11.8.2	ETH layer network terminology	252
11.8.3	Ethernet layer network example	253
11.9	MPLS layer network model	255
11.9.1	MPLS layer network terminology	255
11.9.2	MPLS layer network example	256
	Glossary.	259
	References	275
	Index	279
