About the Authors	vii
Acknowledgments	xi
Introduction	xxv
Chapter 1: A Quick Introduction to Programming	1
<hr/>	
Overview	1
Variables and Data Types	2
Flow Control	8
Branching	8
Looping	13
Operators	17
Operator Precedence	18
Organizing and Reusing Code	19
Top-Down versus Event-Driven	23
Coding Guidelines	24
Expect the Unexpected	25
Always Favor the Explicit over the Implicit	25
Modularize Your Code into Procedures, Modules, Classes, and Components	26
Use the “Hungarian” Variable Naming Convention	26
Don’t Use One Variable for More Than One Job	27
Always Lay Out Your Code Properly	27
Use Comments To Make Your Code More Clear and Readable, but Don’t Overuse Them	27
Summary	28
Chapter 2: What VBScript Is—and Isn’t!	29
<hr/>	
Overview	29
Windows Script	29
Version Information	30
VBScript Is a Subset of VB	30
VBScript Is a Scripting Language	30
VBScript Is Interpreted at Runtime	31

Contents

Runtime Compilation—Disadvantages	32
Runtime Compilation—Advantages	33
Advantages of Using VBScript	34
Is VBScript Right for You?	35
How VBScript Fits In with the Visual Basic Family	35
Visual Basic	36
Visual Basic for Applications	36
VBScript	36
Is VBScript a “Real” Programming Language?	37
What Can You Do with VBScript?	37
Windows Script Host	37
Windows Script Components	38
Client-Side Web Scripting	38
Server-Side Web Scripting	38
Remote Scripting	39
HTML Applications	39
Add VBScript to Your Applications	40
Tool of the Trade—Tools for VBScript	40
Text Editor Listing	40
Summary	41
Chapter 3: Data Types	43
Overview	43
Scripting Languages as Loosely Typed	43
Why Data Types Are Important	44
The Variant: VBScript’s Only Data Type	46
Testing For and Coercing Subtypes	47
Implicit Type Coercion	55
Empty and Null	61
The Object Subtype	65
The Error Subtype	67
Arrays as Complex Data Types	68
What Is an Array?	69
Arrays Have Dimensions	69
Array Bounds and Declaring Arrays	70
Accessing Arrays with Subscripts	71
Looping through Arrays	74

Contents

Erasing Arrays	76
Using VarType() with Arrays	77
Summary	77
Chapter 4: Variables and Procedures	79
<hr/>	
Overview	79
Option Explicit	79
Naming Variables	81
Procedures and Functions	82
Procedure Syntax	83
Function Syntax	84
Calling Procedures and Functions	87
Optional Arguments	89
Exiting a Procedure or Function	89
Variable Declaration and Scope	90
Variable Lifetime	92
Design Strategies for Scripts and Procedures	93
ByRef and ByVal	96
Literals and Named Constants	98
What is a Literal?	99
What is a Named Constant?	99
Using Named Constants in Place of Literals?	101
Built-In VBScript Constants	102
Summary	103
Chapter 5: Control of Flow	105
<hr/>	
Branching Constructs	105
The “If” Branch	106
The “Select Case” Branch	108
Loop Constructs	110
For...Next	110
For Each...Next	115
Do Loop	117
While...Wend	124
Summary	124

Contents

Chapter 6: Error Handling and Debugging	125
Overview	125
Types of Errors	126
Syntax Errors	126
Runtime Errors	127
Logic Errors	131
Error Visibility and Context	132
Windows Script Host Errors	132
Server-Side ASP Errors	132
Client-Side VBScript Errors in Internet Explorer	133
Handling Errors	134
The Err Object	134
Using the On Error Statements	135
Presenting and Logging Errors	139
Server-Side ASP Errors	141
Generating Custom Errors	143
Using Err.Raise	143
When Not to Use Err.Raise	144
When to Generate Custom Errors	146
Debugging	148
What is a Debugger?	149
Options for Debugging VBScript Code	150
Debugging without a Debugger	150
Debugging WSH Scripts with the Microsoft Script Debugger	154
Debugging Client-Side Web Scripts with the Microsoft Script Debugger	157
Debugging ASP with the Microsoft Script Debugger	161
Using the Microsoft Script Debugger	164
Summary	171
Chapter 7: The Scripting Runtime Objects	173
Overview	173
What Are Runtime Objects?	173
The Built-In Objects: Debug, Err, and RegExp	174
Creating Objects	174
Properties and Methods	175
The “With” Keyword	175
Objects Can Have Multiple References	176

Contents

Object Lifetime and Destroying Objects	178
The Dictionary Object	179
Overview	180
Three Different Ways to Add	184
The CompareMode Property	185
The Item Property	185
The Exists Method	186
The FileSystemObject Library	186
Why FileSystemObject?	186
Using Collections	186
Understanding FileSystemObject	188
Creating a Folder	189
Copying a File	190
Copying a Folder	191
Reading a Text File	192
Writing to a Text File	195
Summary	197
Chapter 8: Classes in VBScript (Writing Your Own COM Objects)	199
Overview	199
Objects, Classes, and Components	199
The Class Statement	201
Defining Properties	202
Private Property Variables	202
Property Let	202
Property Get	203
Property Set	204
Making a Property Read-Only	206
Making a Property Write-Only	207
Public Properties without Property Procedures	207
Defining Methods	208
Class Events	210
The Class_Initialize Event	210
The Class_Terminate Event	211
Class-Level Constants	212
Class-Level Arrays	213
Building and Using a Sample VBScript Class	214
Summary	222

Contents

Chapter 9: Regular Expressions	223
Overview	223
Introduction to Regular Expressions	223
Regular Expressions in Action	223
Building on Simplicity	226
The RegExp Object	228
RegExp Properties	228
Regular Expression Characters	230
RegExp Methods	237
The Matches Collection	240
The Match Object	242
A Few Examples	244
Validating Phone Number Input	244
Breaking Down URIs	245
Testing for HTML Elements	245
Matching White Space	246
Matching HTML Comment Tags	246
Summary	247
Chapter 10: Client-Side Web Scripting	249
Overview	249
Tools Of The Trade	249
How Browser Scripting Works	250
Different Scripting Languages	251
Browser Wars—How Things Have Changed!	252
JavaScript, Jscript, and ECMAScript	252
VBScript	253
Responding to Browser Events	254
Adding an Event Handler	254
Adding an Event Handler That Passes Parameters	255
Cancelling Events	257
The Order of Things	259
Form Validation	261
Validating Numerical Input Box Values	263
Validating Radio Buttons	264
Validating Select Controls and Dates	266

Contents

The Document Object Model	269
The DOM in Action	270
Summary	275
Chapter 11: Super-Charged Client-Side Scripting	277
<hr/>	
Overview	277
Requirements	277
Browser Security	278
Scriptlets—Ancestors of Behaviors	278
What is a Scriptlet?	278
The Prefix “public_” Exposes Scriptlet Members	280
Packaging Code in a Scriptlet for Reuse	281
Event Management	286
Relationship to the Event Handler	286
Scriptlet Model Extensions	289
Scriptlets Are Deprecated in IE5	292
Behaviors	292
Which Technologies Implement Behaviors?	292
Applying a Behavior to an HTML Element	293
HTML Components (HTCs)	294
Extending HTML Elements Behavior	294
Summary	304
Chapter 12: Windows Script Host	307
<hr/>	
Overview	307
Tools of the Trade	308
What Is WSH?	308
Types of Script Files	309
Running Scripts with the Windows Script Host	310
Command-Line Execution	310
Execution of WSH within the Windows Environment	312
Using .WSH Files to Launch Scripts	312
Windows Script Host Intrinsic Objects	313
The WScript Object	314
The WshArguments Object	322
The WshShell Object	323

Contents

The WshNamed Object	341
The WshUnnamed Object	343
The WshNetwork Object	344
The WshEnvironment Object	349
The WshSpecialFolders Object	351
The WshShortcut Object	353
The WshUrlShortcut Object	359
Summary	361
Chapter 13: Windows Script Components	363
Overview	363
What Are Windows Script Components?	363
What Tools Do You Need?	364
The Script Component Runtime	364
Script Component Files	365
The Script Component Wizard	367
Exposing Properties, Methods, and Events	374
Properties	374
Methods	375
Events	377
Registration Information	378
Creating the Script Component Type Libraries	380
How to Reference Other Components	381
Script Components for ASP	382
Compile-Time Error Checking	384
Using VBScript Classes in Script Components	385
Limitations of VBScript Classes	385
Using Internal Classes	385
Including External Source Files	387
Summary	388
Chapter 14: Script Encoding	389
Overview	389
Limitations of Script Encoding	389
Why Encode Scripts?	390
How to Encode Script	390
The Microsoft Script Encoder	390

Contents

Encoded Scripts—Do's and Don'ts	404
Decoding the Script	405
Other Methods of Script Obfuscation	405
Remove Comment Tags	405
Substitute Good Variable Names for Bad Ones	405
Add/Remove White Space	405
Summary	406
Chapter 15: Remote Scripting	407
Overview	407
The Influence of JScript on Remote Scripting	407
How Remote Scripting Works	408
Using VBScript for Remote Scripting	408
Installing Remote Script on the Server	409
Enabling Remote Scripting on the Server	409
Enabling Remote Scripting on the Client Side	410
Invoking a Remote Method	410
Transforming an ASP Page into a VBScript Object	412
Summary	414
Chapter 16: HTML Applications	415
What is an HTML Application?	415
What Tools Do You Need?	416
How to Create a Basic HTA	416
Sample HTML File	417
Turning an HTML File into an HTML Application	419
The HTA:APPLICATION Element	420
Do File Extensions Still Matter?	421
All HTA:APPLICATION Attributes	423
Interdependent Attributes	425
Helpful Hints	428
HTAs and Security	428
Frames without Trust	428
APPLICATION Attribute	429
HTA Deployment Models	432
Web Model	432

Contents

Package Model	432
Hybrid Model	433
What Isn't Supported with HTAs?	433
The Window Object	433
Default Behaviors	434
Summary	434
Chapter 17: Server-Side Web Scripting	435
<hr/>	
Overview	435
The Anatomy of the HTTP Protocol	436
Overview	436
The HTTP Server	436
Protocol Basics	437
Introducing Active Server Pages	441
How the Server Recognizes ASPs	441
ASP Basics	442
The Active Server Pages Object Model	444
Collections	445
The Request Object	446
The Response Object	451
The Application and Session Objects	455
The Server Object	458
The ObjectContext Object	460
Using Active Server Pages Effectively	460
Designing the Site	461
Creating the global.asa file	461
Creating Our Main Page	462
The ASP/VBScript Section	465
The HTML Section	467
Summary	468
Chapter 18: Adding VBScript to Your VB Applications	469
<hr/>	
Overview	469
Why Add Scripting to Your Application?	469
Macro and Scripting Concepts	470
Adding the Script Control to a VB Application	471

Contents

Script Control Reference	472
Object Model	472
Objects and Collections	472
Constants	487
Error Handling with the Script Control	488
Common Errors	488
Debugging	491
Using Encoded Scripts	491
Sample Project	492
Summary	497
Appendix A: VBScript Functions and Keywords	499
Appendix B: Variable Naming Convention	569
Appendix C: Coding Convention	571
Appendix D: Visual Basic Constants Supported in VBScript	575
Appendix E: VBScript Error Codes and the Err Object	581
Appendix F: The Scripting Runtime Library Object Reference	597
Appendix G: The Windows Script Host Object Model	609
Appendix H: Regular Expressions	619
Appendix I: VBScript Features not in VBA	623
Appendix J: VBA Features not in VBScript	625
Appendix K: The Variant Subtypes	627
Appendix L: ActiveX Data Objects	631
Index	657
