

CONTENTS

Preface	xix
Contributors	xxi
1 Microfluidics	1
1.1 Microfluidics	1
1.1.1 Fluid Manipulation	3
1.1.2 Single-Cell Analysis	3
1.1.3 Microreactors	4
1.1.4 Cell Sorting	4
1.1.5 Point-of-Care Diagnostics in Developing and Third-World Countries	5
1.1.6 Microchip Capillary Electrophoresis	5
References	6
PART I CELL ANALYSIS ON MICROFLUIDIC DEVICES	9
2 Using Microfluidics to Understand and Control the Cellular Microenvironment	11
2.1 Introduction: Engineering the Microenvironment	11
2.2 The Chemical Microenvironment	14
2.2.1 Soluble – Gradients	15
2.2.2 Soluble – Cell Culture	18

2.2.3	Surface Interactions – Patterning and Controlling Cell Adhesion	20
2.3	The Mechanical Microenvironment	21
2.3.1	Cell–Matrix Interactions – 3D Culture	21
2.3.2	Cell–Cell Interactions – Coculture	23
2.4	Conclusion	24
	References	25
3	Microfabricated Devices for Cell Sorting	29
3.1	Introduction	29
3.1.1	Why Sort Cells?	29
3.1.2	Sorting Strategies	30
3.1.3	Steps in Sorting	30
3.1.4	Lab-on-a-Chip Technologies	31
3.2	Microfabricated Formats for Cell Sorting	32
3.2.1	Sorts in Fluidic Channels	32
3.2.2	Array-Based Sorting	44
3.2.3	Arrayed Sieves, Weirs, and Posts for Sized-Based Cell Sorting	53
3.3	Outlook for the Future	54
	Acknowledgments	56
	References	56
4	Advanced Microfluidic Tools for Single-Cell Manipulation and Analysis	65
4.1	Introduction	65
4.2	Fluidic Control	66
4.2.1	Channels	66
4.2.2	Microvalves and Pumps	67
4.3	Temperature Control	69
4.4	Cell Manipulation	71
4.4.1	Cell and Surface Modification	71
4.4.2	Cell Capture	73
4.5	Detection	75
4.5.1	Optical Detection	75
4.5.2	Electrical Detection	77
4.6	Integration	77
4.6.1	Genetic Analysis of Single Cells	77
4.6.2	Gene Expression Analysis of Single Cells	79
4.6.3	Fluorescence Imaging of Whole Cells	80
4.6.4	Electrical Recording from Whole Cells	80
4.6.5	Fully Integrated Microdevice for Cellular Analysis	82

4.7	Conclusions	82
	Acknowledgments	82
	References	83
5	Engineering Cellular Microenvironments with Microfluidics	87
5.1	Introduction	87
5.1.1	The Microenvironment Gap	87
5.1.2	What Specifically is the Cellular Microenvironment?	88
5.1.3	Opportunities for Microenvironment Engineering Using Microfluidics	88
5.2	Microfluidic Cultures can Simulate <i>in vivo</i> Microenvironments	91
5.2.1	Use of Substantially Static Microfluidic Devices to Engineer the Chemical Microenvironment	91
5.2.2	Use of Microfluidic Devices with Active Fluid Flow to Engineer the Chemical Microenvironment	93
5.2.3	Use of Microfluidic Devices with Active Fluid Flow to Engineer the Fluid Mechanical Microenvironment	100
5.3	Other Useful Capabilities of Microfluidic Cell Culture Devices	103
5.3.1	Efficient Manipulation of Precious Cells or Cells Available in Only Small Numbers	103
5.3.2	Integrated Assays	105
5.3.3	Three-Dimensional Culture	107
5.4	Microfluidic Devices Useful for Cell Applications Other than Culture	107
5.5	Future Prospects for Biological Studies in Microfluidic Bioreactors	108
	References	108
6	Microfluidic Culture Platforms for Stem Cell and Neuroscience Research	115
6.1	Introduction	115
6.2	Applications for Stem Cell Research	116
6.2.1	Microfluidic Devices for Culturing Stem Cells	116
6.2.2	Differentiation of Stem Cells in the Microfluidic Device	119
6.3	Applications for Neuroscience Research	122
6.3.1	Axon Guidance in the Microfluidic Device	122
6.3.2	Synapse Microfluidic Device	126
6.3.3	Patch Clamp in the Microfluidic Device	128
6.4	Summary and Future Directions	130
	Acknowledgment	130
	References	131

PART II ENZYMATIC AND NONENZYMATIC REACTIONS ON MICROCHIPS	133
7 Microfluidics for Studying Enzyme Inhibition	135
7.1 Enzyme Assays and Inhibition	135
7.1.1 Enzymes and Enzyme Inhibition	135
7.1.2 Enzyme Catalysis	136
7.1.3 Enzyme Assays	138
7.1.4 Enzyme Inhibition	139
7.2 Microfluidic Assays for Enzymes and Enzyme Inhibition	141
7.2.1 Microfluidic Platforms for Enzyme Assays	142
7.2.2 Enzyme Inhibition Assays in Microfluidic Devices	143
7.3 Enzyme Inhibition Studies in Microfluidic Devices: Specific Studies	156
7.3.1 Capillary Electrophoretic Analysis of Alkaline Phosphatase Inhibition Using a Combination of Continuous and Transient Engagement EMMA	156
7.3.2 Screening of Enzyme Inhibitors Using a Capillary-based Enzyme Microreactor	159
7.3.3 Determination of β -Galactosidase Inhibition in a Microchip Device	162
7.3.4 Online Studies of Acetylcholinesterase Inhibition in a Microchip Device	164
References	167
8 Chemical Synthesis within Continuous Flow Microreactors	171
8.1 Introduction	171
8.2 Advantages of Performing Chemical Synthesis in Microreactors	172
8.3 Chemical Synthesis in Microreactors	173
8.3.1 Control of Hazardous Reactions	174
8.3.2 Regioselective Synthesis	174
8.3.3 Rapid Reaction Optimization	175
8.3.4 Photochemical Reactions	176
8.3.5 Multistep Reactions	177
8.3.6 Biphasic Reactions	178
8.3.7 Synthesis of Analytically Pure Compounds	179
8.4 Large-Scale Manufacture Using Microreactors	180
8.5 Conclusions	180
References	181
9 Microfluidic Reactors for Sequential and Parallel Reactions	183
9.1 Introduction	183

9.2	Sequential Reactions in Microfluidic Devices	186
9.2.1	Continuous Flow Microfluidic Systems for Sequential Chemical Reactions	186
9.2.2	Integrated Microfluidic Systems for Sequential Reactions	189
9.3	Parallel Reactions in Microfluidic Devices	193
9.3.1	Continuous Flow Microfluidic Systems for Parallel Reactions	193
9.3.2	Integrated Microfluidic Systems for Parallel Reactions	200
9.4	Conclusions	202
	References	202
10	Gene Isolation, Gene Transformation, and Enzyme Reaction on a Chip	207
10.1	Introduction	207
10.2	DNA/RNA Isolation on a Microfluidic Chip	208
10.3	Gene Ligation on a Microfluidic Chip	209
10.4	Gene Transformation on a Chip	210
10.5	Enzymatic Reaction on a Chip	212
10.6	Summary and Perspective	215
	Acknowledgment	215
	References	215
PART III	SEPARATIONS ON MICROCHIPS	217
11	Chemical Monitoring in Complex Biological Environments Using Separation-Based Sensors in Chips	219
11.1	Separation-Based Sensors	219
11.2	Fast Separations with Separation-Based Sensors	221
11.2.1	Theory of Fast Separations with Capillary Electrophoresis	221
11.2.2	Additional Concerns for Fast Separations on Chips	222
11.3	Micro Total Analysis Systems with Electrophoretic Separations for Monitoring of Biological Systems	227
11.3.1	Separation-Based Sensors on Chips for <i>In Vitro</i> Cell Monitoring	228
11.3.2	Separation-Based Sensors for Off-Chip Sampling of Cellular Tissues	232
11.4	Miniaturization and Integration of Separation-Based Sensor Components	238
11.4.1	Miniaturization of Controlling Electronics	238
11.4.2	Miniaturization of Detection Components	239
	References	239

12 Analytical Strategies Toward the Analysis of Phenolic Compounds by Capillary Electrophoresis and Microchip Capillary Electrophoresis	245
12.1 Introduction	245
12.2 Experimental Section	247
12.2.1 Chemicals and Apparatus	247
12.2.2 Fabrication of the PDMS Microchip	248
12.3 Results and Discussion	249
12.3.1 Separation of Phenolic Compounds by CE and Microchip-CE	249
12.3.2 Electrochemical Detection of Phenolic Compounds	252
12.4 Applications	254
12.5 Conclusions	257
Acknowledgments	257
References	257
13 Chemical Separations in 3D Microfluidics	263
13.1 Introduction	263
13.2 Fabrication	264
13.3 Results and Discussion on 3D Valves	265
13.4 Microfluidic Three-Dimensional Separation Columns	268
13.5 Results on Liquid Chromatography	270
13.6 Conclusions	271
References	272
14 Enabling Fundamental Research in Proteomics	273
14.1 Introduction	273
14.2 Membrane Protein Extraction	274
14.2.1 Design and Fabrication of the Lab-on-Chip System	275
14.3 Conclusion	287
Acknowledgments	287
References	287
PART IV BIOMEDICAL APPLICATIONS OF MICROFLUIDICS	289
15 Microengineering Neural Development	291
15.1 Introduction	291
15.2 Microengineering Guidance of Axons to their Targets	292
15.2.1 Microfluidic Patterning of Biomolecules for Probing Neuronal Adhesion and Growth	293
15.2.2 Microfluidic Surface Patterning for Studying Axogenesis	296

15.2.3	Microfluidic Surface Patterning for Contact Guidance Studies	296
15.2.4	Guidance by Gradients of Soluble Factors	298
15.3	Synaptogenesis on a Microfluidic Chip	299
15.3.1	Microfluidic Focal Delivery of Synaptogenic Factors Using Multiple Laminar Flows	299
15.3.2	Planar Nanoholes Devices	301
15.4	Conclusions	302
	References	302
16	Applications of Centrifugal Microfluidics in Biology	305
16.1	Introduction	305
16.2	Why Use Centrifugal Force for Fluid Manipulation?	306
16.3	How Centrifugal Microfluidic Platforms Work	309
16.4	CD Applications	310
16.4.1	Two-Point Calibration of an Optode-Based Detection System	310
16.4.2	CD Platform for Enzyme-Linked Immunosorbant Assays (ELISA)	312
16.4.3	Multiple Parallel Assays	312
16.4.4	Cellular-Based Assays on CD Platform	313
16.4.5	Integrated Nucleic Acid Sample Preparation and PCR Amplification	317
16.4.6	Sample Preparation for MALDI-MS Analysis	319
16.4.7	Modified Commercial CD/DVD Drives in Analytical Measurements	321
16.4.8	Microarray Hybridization for Molecular Diagnosis of Infectious Diseases	323
16.4.9	Cell Lysis on CD	326
16.5	Conclusions	328
	Acknowledgment	329
	References	329
17	Microfluidic Techniques for Point-of-Care <i>In Vitro</i> Diagnostics	331
17.1	Introduction	331
17.2	Microfluidic Immunoassays	332
17.2.1	Benchtop Commercial Systems	332
17.2.2	Improvements Offered by Miniaturization	334
17.2.3	The Microfluidic Approach	336
17.2.4	Multiplexed Microfluidic Fluorescence Immunoassays	337
17.2.5	Future Microfluidic Benchtop Systems	338
17.2.6	Future Microfluidic Handheld Systems	341
17.2.7	Conclusions	341
17.3	Microfluidic Vias and Derivative Applications	341
17.3.1	Technological Background	341

17.3.2	Microfluidic Vias	342
17.3.3	Microfluidic Septum	345
17.3.4	Nested Bioarrays	347
17.3.5	Autoregulatory Devices	349
17.3.6	Conclusions	353
17.4	Conclusions	353
	Acknowledgments	353
	References	353
PART V MICROFLUIDIC FABRICATION STUDIES		355
18	Fabrication of Polymeric Microfluidic Devices	357
18.1	Introduction	357
18.2	Glass- and Silicon-Based Materials	358
18.3	Plastics and Polymeric Materials	359
18.4	Approaches to Microfabrication	360
18.4.1	Direct Write Techniques	360
18.4.2	Replication Techniques	361
18.5	Selected Microfabrication Techniques	361
18.5.1	Wire Imprinting	361
18.5.2	Laser Ablation	363
18.5.3	Mechanical Machining	365
18.5.4	Hot Embossing	367
18.6	Conclusions	368
	Acknowledgments	369
	References	369
19	Nano Fountain Pen: Toward Integrated, Portable, Lab-on-Chip Devices	373
19.1	Introduction	373
19.2	Nano Fountain Pen	374
19.3	Protein Printing	375
19.4	Enzyme Lithography	377
19.5	Polymer Microlenses	383
19.6	Conclusions	386
	References	387
20	Surface Engineering of Microfluidic Devices Using Reactive Polymer Coatings	389
20.1	Introduction	389
20.2	Microfluidics Surface Modification Techniques	390
20.2.1	Energy-Induced Surface Modifications	390

20.2.2	Surface Modifications Through Adsorbed Coatings	391
20.2.3	Chemical Surface Modifications	394
20.2.4	Surface Modification via Chemical Vapor Deposition Polymerization	397
20.3	Conclusions	403
	References	404
21	Microchips Containing <i>In Situ</i> Patterned Polymeric Media for Biochemical Analysis	409
21.1	Introduction and Scope	409
21.2	General Information about Patterned Materials	410
21.2.1	Types of Patterned Materials	410
21.2.2	Advantages of <i>In Situ</i> Patterned Materials	412
21.2.3	Challenges Associated with <i>In Situ</i> Patterned Materials	413
21.2.4	Approaches to Photopatterning of Materials	414
21.3	Photopatterned Materials for Protein Analysis	416
21.3.1	Crosslinked Sieving Gels for Protein Separations	416
21.3.2	Integrated Preconcentration-Protein Analysis	417
21.3.3	Porous Polymer Monoliths for Chromatography	417
21.3.4	Polymer Membranes for Dialysis	420
21.4	DNA Purification and Analysis	420
21.4.1	Sieving Media for Electrophoretic Analysis	420
21.4.2	Photopatterned Materials for DNA Sample Pretreatment	425
21.5	Patterned Materials for Cell Culture and Analysis	427
21.6	Other Biomolecules	428
21.7	Conclusions	429
	References	429
PART VI	HYBRID MICROFLUIDIC APPLICATIONS	433
22	Coupling Electrochemistry to Microfluidics	435
22.1	Introduction	435
22.2	Electrochemical Methods of Analysis	436
22.2.1	Amperometry	436
22.2.2	Conductivity	437
22.2.3	Potentiometry and Voltammetry	438
22.3	Microfluidic Devices	438
22.3.1	Electrophoresis Microchips	438
22.3.2	Amperometric Detectors	439
22.3.3	Conductivity	441
22.3.4	Microfluidic Biosensors	442
22.4	Applications	444
22.4.1	Biological Applications	444

22.4.2 Environmental Applications	447
22.5 Conclusions and Future Directions	448
References	448
23 Manipulating Mass-Limited Samples Using Hybrid Microfluidic/Nanofluidic Networks	451
23.1 Introduction	451
23.2 Nanofluidics	452
23.3 Hybrid Microfluidic/Nanofluidic Systems	454
23.3.1 Digital Fluidics	456
23.4 Functionalized NCAMs	461
23.4.1 Methods for Nanopore Modification	463
23.4.2 Transport Control in Tailored NCAMs	464
23.4.3 Molecular Recognition in Tailored NCAMs	467
23.5 The Future	469
Acknowledgments	470
References	470
24 Magnetic Bead-based Methods to Study the Interaction of Teicoplanin with Peptides and Bacteria	473
24.1 Introduction	473
24.2 Experimental	475
24.2.1 Derivatization of Magnetic Beads with Antibiotics	475
24.2.2 Preparation of Bacteria	476
24.2.3 Peptide Binding Studies with Teic-Bearing Magnetic Beads	476
24.3 Results and Discussion	479
24.3.1 Derivatization of Magnetic Beads with Antibiotics	479
24.3.2 Suspension Assays of Fluorescent Peptides Binding to Teic-Bearing Beads	480
24.3.3 Fluorescent Imaging	482
24.3.4 Bacteria Binding to the Teic-Beads	484
24.3.5 Microfabrication of Microfluidic Chips	485
24.3.6 Microfluidic Assays on Teicoplanin-Ligand Binding	486
24.4 Conclusions	487
Acknowledgments	487
References	487
25 Interfacing Microchannel Electrophoresis with Electrospray Ionization Mass Spectrometry	489
25.1 Introduction	489
25.2 Electrospray Ionization	491
25.3 Coatings	493

25.4	Spray Emitters	495
25.5	CE and ESI Electrode Connections	497
25.5.1	Two-Electrode Systems	497
25.5.2	Three-Electrode Systems	498
25.5.3	Direct Contact	499
25.5.4	Liquid Junctions	500
25.6	Integrated Applications	503
25.7	Conclusions	504
	References	505
	Index	509
