Preface	ix
Foreword	xi
Acknowledgements	xiii
1 Interest rate	1
1.1 Measuring time	1
1.2 Interest rate	2
1.3 Discounting	5
Exercises	7
Solutions	9
2 Investment decision criteria	13
2.1 Rate of return; time of return	13
2.2 Net present value	14
2.3 Internal rate of return	15
2.4 Other investment criteria	16
Further reading	16
Exercises	17
Solutions	19
3 Bonds	23
3.1 Financial markets	23
3.2 Bonds	26
3.3 Yield	27
3.4 Zero-coupon yield curve; arbitrage price	30
Further reading	34
Exercises	35
Solutions	39

vi	Contents
<hr/>	
4 Derivatives	47
4.1 Introduction	47
4.2 Forward contracts	48
4.3 'Plain vanilla' options	51
Exercises	54
Solutions	58
5 Portfolio theory	65
5.1 Summary of portfolio valuation	65
5.2 Risk and return	66
5.3 Gains of diversification; portfolio optimization	71
5.4 Capital Asset Pricing Model	72
Further reading	73
Exercises	74
Solutions	77
6 Binomial model	85
6.1 Introduction	85
6.2 Binomial trees	85
Further reading	90
Exercises	91
Solutions	94
7 Lognormal model	103
7.1 Lognormal model	103
7.2 Closed-form formulas	105
7.3 Monte-Carlo method	106
Further reading	108
Exercises	109
Solutions	113
8 Dynamic hedging	125
8.1 Introduction	125
8.2 Delta-hedging	126
8.3 Other risk parameters: the Greek letters	127
Further reading	132
Exercises	133
Solutions	136

Contents	vii
9 Models for asset prices in continuous time	141
9.1 Continuously compounded interest rate	141
9.2 Introduction to models for the behaviour of asset prices in continuous time	142
9.3 Introduction to stochastic processes	144
9.4 Introduction to stochastic calculus	147
References and further reading	148
Exercises	149
Solutions	154
10 The Black–Scholes model	167
10.1 The Black–Scholes partial differential equation	167
10.2 Black–Scholes formulas	170
10.3 Volatility	171
References and further reading	174
Exercises	175
Solutions	178
Appendix A: Probability review	185
Appendix B: Calculus review	193
Appendix C: Finance formulas	197
Index	203
