Foreword by Mark Anson	xv
1 Introduction	1
PART I HEDGE FUND OVERVIEW	
2 History Revisited	7
2.1 The very early years: The 1930s	7
2.2 The formative years (1949–1968)	8
2.3 The dark ages (1969–1974)	11
2.4 The renaissance (1975–1997)	12
2.5 The Asian and Russian crises (1997–1998)	15
2.6 The equity bubble years	18
2.7 Hedge funds today	19
2.8 The key characteristics of modern hedge funds	24
2.9 The future	35
3 Legal Environment	37
3.1 The situation in the US	39
3.1.1 The Securities Act (1933)	39
3.1.2 Securities Exchange Act (1934)	44
3.1.3 Investment Company Act	46
3.1.4 Investment Advisers Act (1940)	48
3.1.5 Blue-sky laws	55
3.1.6 National Securities Markets Improvement Act (1996)	55
3.1.7 Employee Retirement Income Security Act (1974)	56
3.1.8 Other regulations	56
3.1.9 The Commodity Futures Trading Commission	57
3.2 The situation in Europe	59
3.2.1 The UCITS directives and mutual fund regulation	59
3.2.2 The case of European hedge funds	62
3.2.3 Germany	63
3.2.4 France	69

3.2.5	Italy	75
3.2.6	Switzerland	76
3.2.7	Ireland	78
3.2.8	Spain	80
3.3	The situation in Asia	81
3.4	Internet and the global village	81
4	Operational and Organizational Structures	85
4.1	Legal structures for stand-alone funds	85
4.1.1	In the United States (“onshore”)	85
4.1.2	Outside the United States (“offshore”)	87
4.2	A network of service providers	90
4.2.1	The sponsor and the investors	91
4.2.2	The board of directors	91
4.2.3	The investment adviser	92
4.2.4	The investment manager or management company	92
4.2.5	The brokers	93
4.2.6	The fund administrator	99
4.2.7	The custodian/trustee	103
4.2.8	The legal counsel(s)	103
4.2.9	The auditors	105
4.2.10	The registrar and transfer agent	106
4.2.11	The distributors	106
4.2.12	The listing sponsor	107
4.3	Specific investment structures	108
4.3.1	Mirror funds	108
4.3.2	Master/feeder structures	109
4.3.3	Managed accounts	112
4.3.4	Umbrella funds	114
4.3.5	Multi-class/multi-series funds	115
4.3.6	Side pockets	116
4.3.7	Structured products	117
4.4	Disclosure and documents	118
4.4.1	Private placement memorandum (PPM)	118
4.4.2	Memorandum and articles of association	118
4.4.3	ADV form	118
4.4.4	Limited partnership agreements	119
4.4.5	Side letters	119
5	Understanding the Tools Used by Hedge Funds	121
5.1	Buying and selling using a cash account	121
5.2	Buying on margin	122
5.2.1	Mechanics	122
5.2.2	Buying on margin: an example	124
5.3	Short selling and securities lending	126
5.3.1	Mechanics of short selling	127
5.3.2	A detailed example	134

	Contents	vii
5.3.3	Restrictions on short selling	135
5.3.4	Potential benefits of short selling	139
5.3.5	Alternatives to securities lending: repos and buys/sell backs	140
5.4	Derivatives	142
5.4.1	Terminology	144
5.4.2	Basic derivatives contracts	144
5.4.3	Credit derivatives	146
5.4.4	Benefits and uses of derivatives	149
5.5	Leverage	151
PART II HEDGE FUND STRATEGIES AND TRADE EXAMPLES		
6	Introduction	159
7	Long/Short Equity Strategies	163
7.1	The mechanics of long/short equity investing	163
7.1.1	A single position	163
7.1.2	Sources of return and feasible portfolios	165
7.1.3	Disadvantages of long/short equity investing	169
7.2	Investment approaches	170
7.2.1	The valuation-based approach	170
7.2.2	Sector specialist hedge funds	174
7.2.3	Quantitative approaches	175
7.2.4	Equity non-hedge hedge funds	175
7.2.5	Activist strategies	176
7.3	Historical performance	181
8	Dedicated Short	187
8.1	The pros and cons of dedicated short selling	187
8.2	Typical target companies and reactions	188
8.3	Historical performance	193
9	Equity Market Neutral	197
9.1	Definitions of market neutrality	197
9.1.1	Dollar neutrality	197
9.1.2	Beta neutrality	198
9.1.3	Sector neutrality	200
9.1.4	Factor neutrality	200
9.1.5	A double alpha strategy	202
9.2	Examples of equity market neutral strategies and trades	203
9.2.1	Pairs trading	203
9.2.2	Statistical arbitrage	207
9.2.3	Very-high-frequency trading	208
9.2.4	Other strategies	211
9.3	Historical performance	211

10	Distressed Securities	215
10.1	Distressed securities markets	215
10.1.1	The origins: railways	215
10.1.2	From high yield to distressed securities	216
10.1.3	The distressed securities market today	219
10.2	Distressed securities investing	226
10.2.1	Why distressed securities?	226
10.2.2	Legal framework	227
10.2.3	Valuation	228
10.2.4	Active versus passive	230
10.2.5	Risks	232
10.3	Examples of distressed trades	233
10.3.1	Kmart	233
10.3.2	Failed leveraged buyouts	234
10.3.3	Direct lending	235
10.3.4	The case of airlines	236
10.4	Historical performance	239
11	Merger Arbitrage	243
11.1	Mergers and acquisitions: a historical perspective	243
11.2	Implementing merger arbitrage: basic principles	246
11.2.1	Arbitraging a cash tender offer	247
11.2.2	Arbitraging a stock-for-stock offer (fixed exchange rate)	250
11.2.3	Arbitraging more complex offers	252
11.3	The risks inherent in merger arbitrage	254
11.4	Historical performance	263
12	Convertible Arbitrage	269
12.1	The terminology of convertible bonds	269
12.2	Valuation of convertible bonds	272
12.2.1	Valuation from an academic perspective	272
12.2.2	Valuation from a practitioner perspective (the component approach)	273
12.2.3	Risk measurement and the Greek alphabet	277
12.3	Convertible arbitrage: the basic delta hedge strategy	279
12.4	Convertible Arbitrage in practice: stripping and swapping	285
12.5	The strategy evolution	287
12.6	Historical performance	293
13	Fixed Income Arbitrage	297
13.1	The basic tools of fixed income arbitrage	297
13.2	Examples of sub-strategies	299
13.2.1	Treasuries stripping	299
13.2.2	Carry trades	301

	Contents	ix
13.2.3	On-the-run versus off-the-run Treasuries	301
13.2.4	Yield-curve arbitrage	303
13.2.5	Swap-spread arbitrage	304
13.2.6	The Treasury–Eurodollar spread (TED)	305
13.3	Historical performance	306
14	Emerging Markets	311
14.1	The case for emerging market hedge funds	311
14.2	Examples of strategies	314
14.2.1	Equity strategies	314
14.2.2	Fixed income strategies	319
14.3	Historical performance	323
15	Global Macro	327
15.1	Global macro investment approaches	327
15.2	Examples of global macro trades	328
15.2.1	The ERM crisis (1992)	329
15.2.2	The ECU arbitrage	332
15.2.3	The Asian crisis (1997)	333
15.2.4	The euro convergence (1995–1997)	337
15.2.5	Carry trades	340
15.2.6	The twin deficits	344
15.2.7	Risk management and portfolio construction	345
15.3	Historical performance	346
16	Managed Futures and Commodity Trading Advisors (CTAs)	351
16.1	The various styles of managed futures	352
16.1.1	Trading approach: discretionary versus systematic	352
16.1.2	Type of analysis: fundamental versus technical	354
16.1.3	Source of returns: trend followers and non trend followers	354
16.1.4	Timeframe for trades	355
16.2	Examples of systematic trading rules	355
16.2.1	Moving Average Convergence/Divergence (MACD)	355
16.2.2	Examples of trading ranges signals	361
16.2.3	Portfolio construction	363
16.2.4	Transparency or regulated black boxes?	363
16.2.5	Investment vehicles	365
16.2.6	Back-testing and calibration	365
16.3	Historical Performance	366
16.4	The future of managed futures	370
17	A Smorgasbord of Other Strategies	373
17.1	Capital structure arbitrage and credit strategies	373
17.2	Weather derivatives, weather insurance and catastrophe bonds	381

x Contents

17.3	Mutual Fund Arbitrage	382
17.3.1	The forward pricing mechanism	383
17.3.2	The loopholes in forward pricing	384
17.3.3	Unethical, but persistent	386
17.3.4	A brutal ending	387
17.4	Arbitraging between NAVs and quoted price: Altin AG	388
17.5	Split strike conversion	390
17.6	Event-Driven Special Situations	392
17.7	Cross-listing and dual-listing arbitrage	393
17.7.1	Cross-listed companies and ADRs	393
17.7.2	Dual-listed companies	394
17.8	From public to private equity	395
17.9	Regulation D and PIPEs funds	397
17.10	IPO Lock-up Expirations	398
PART III MEASURING RETURNS, RISKS AND PERFORMANCE		
18	Measuring Net Asset Values and Returns	403
18.1	The difficulties of obtaining information	404
18.2	Equalization, crystallization and multiple share classes	406
18.3	The inequitable allocation of incentive fees	406
18.4	The free-ride syndrome	407
18.5	Onshore versus Offshore Funds	408
18.6	The multiple share approach	409
18.7	The equalization factor/depreciation deposit approach	410
18.8	Simple Equalization	414
18.9	Consequences for performance calculation	414
18.10	The holding period return	415
18.11	Annualizing	417
18.12	Multiple hedge fund aggregation	418
18.13	Continuous compounding	419
19	Return Statistics and Risk	423
19.1	Calculating return statistics	423
19.1.1	Central tendency statistics	426
19.1.2	Gains versus losses	428
19.2	Measuring risk	429
19.2.1	What is risk?	430
19.2.2	Range, quartiles and percentiles	430
19.2.3	Variance and volatility (standard deviation)	431
19.2.4	Back to histograms, return distributions and z-scores	434
19.3	Downside risk measures	439
19.3.1	From volatility to downside risk	439
19.3.2	Semi-variance and semi-deviation	440
19.3.3	The shortfall risk measures	443

	Contents	xi
19.3.4	Value at risk	443
19.3.5	Drawdown statistics	446
19.4	Benchmark-related statistics	447
19.4.1	Intuitive benchmark-related statistics	447
19.4.2	Beta and market risk	448
19.4.3	Tracking error	449
20	Risk-Adjusted Performance Measures	451
20.1	The Sharpe ratio	455
20.1.1	Definition and interpretation	455
20.1.2	The Sharpe ratio as a long/short position	457
20.1.3	The statistics of Sharpe ratios	457
20.2	The Treynor ratio and Jensen alpha	460
20.2.1	The CAPM	460
20.2.2	The market model	462
20.2.3	The Jensen alpha	463
20.2.4	The Treynor (1965) ratio	465
20.2.5	Statistical significance	466
20.2.6	Comparing Sharpe, Treynor and Jensen	466
20.2.7	Generalizing the Jensen alpha and the Treynor ratio	467
20.3	M^2 , M^3 and Graham–Harvey	468
20.3.1	The M^2 performance measure	468
20.3.2	GH1 and GH2	470
20.4	Performance measures based on downside risk	472
20.4.1	The Sortino ratio	472
20.4.2	The upside potential ratio	473
20.4.3	The Sterling and Burke ratios	474
20.4.4	Return on VaR (RoVaR)	475
20.5	Conclusions	476
21	Databases, Indices and Benchmarks	479
21.1	Hedge fund databases	479
21.2	The various biases in hedge fund databases	479
21.2.1	Self-selection bias	480
21.2.2	Database/sample selection bias	482
21.2.3	Survivorship bias	482
21.2.4	Backfill or instant history bias	484
21.2.5	Infrequent pricing and illiquidity bias	485
21.3	From databases to indices	487
21.3.1	Index construction	487
21.3.2	The various indices available and their differences	490
21.3.3	Different indices – different returns	503
21.3.4	Towards pure hedge fund indices	505
21.4	From indices to benchmarks	508
21.4.1	Absolute benchmarks and peer groups	509
21.4.2	The need for true benchmarks	510

PART IV INVESTING IN HEDGE FUNDS

22	Introduction	515
23	Revisiting the Benefits and Risks of Hedge Fund Investing	517
23.1	The benefits of hedge funds	518
23.1.1	Superior historical risk/reward trade-off	518
23.1.2	Low correlation to traditional assets	520
23.1.3	Negative vs positive market environments	523
23.2	The benefits of individual hedge fund strategies	527
23.3	Caveats of hedge fund investing	534
24	Asset Allocation and Hedge Funds	537
24.1	Diversification and portfolio construction: an overview	537
24.1.1	Diversification	538
24.1.2	Portfolio construction	539
24.1.3	Asset allocation	541
24.2	Strategic asset allocation without hedge funds	543
24.2.1	Identifying the investor's financial profile: the concept of utility functions	543
24.2.2	Establishing the strategic asset allocation	546
24.3	Introducing hedge funds in the asset allocation	547
24.3.1	Hedge funds as a separate asset class	547
24.3.2	Hedge funds vs traditional asset classes	548
24.3.3	Hedge funds as traditional asset class substitutes	549
24.4	How much should be allocated to hedge funds?	551
24.4.1	An informal approach	552
24.4.2	The optimizers' answer: 100% in hedge funds	553
24.4.3	Static versus dynamic allocations	554
24.4.4	Dealing with "return management"	555
24.4.5	Optimizer's inputs and the GIGO syndrome	556
24.4.6	Non-standard efficient frontiers	560
24.4.7	How much should we allocate to hedge funds?	561
24.5	Hedge funds as portable alpha overlays	561
24.6	Hedge funds as sources of alternative risk exposure	564
24.7	Risk budgeting and the separation of alpha from beta	565
25	Hedge Fund Selection: A Route Through the Maze	569
25.1	Stating objectives	569
25.2	Filtering the universe	570
25.3	Quantitative Analysis	571
25.4	Qualitative Analysis	572
25.5	Due Diligence: between art and science	573
25.5.1	The strategy	573
25.5.2	The fund itself	574
25.5.3	The management team	575

	Contents	xiii
25.5.4	The infrastructure	575
25.5.5	The process	576
25.6	Ongoing monitoring	576
25.7	Common mistakes in the selection process	577
26	Funds of Hedge Funds	579
26.1	What are funds of hedge funds?	579
26.2	Advantages of funds of funds	579
26.2.1	Efficient Risk Diversification	580
26.2.2	Affordability and Accessibility	582
26.2.3	Professional management and built-in asset allocation	583
26.2.4	Access to closed funds	583
26.2.5	Better internal and external transparency	584
26.3	The dark side of funds of funds	584
26.3.1	Yet another layer of fees!	584
26.3.2	Extra liquidity	585
26.3.3	Lack of control, overdiversification and duplication	587
26.4	Selecting a fund of funds	587
26.5	Fund allocation: A look inside the “black box”	588
26.5.1	Qualitative approaches	588
26.5.2	Quantitative approaches	589
26.6	The future of funds of funds	589
27	Structured Products on Hedge Funds	591
27.1	Total return swaps linked to hedge funds	591
27.2	Call options on hedge funds	592
27.3	Basic notes and certificates	593
27.4	Capital protected notes	594
27.4.1	The financial engineering process of capital protected notes	595
27.4.2	The first generation: the naive approach	595
27.5	The second generation: The option-based approach	598
27.6	The third generation: the dynamic trading approach	602
27.7	The fourth generation: options on CPPI	608
27.8	The flies in the ointment	608
27.9	The future of capital guaranteed products	610
27.10	Collateralized hedge fund obligations	610
28	Conclusions	615
	Bibliography	617
	Index	625
