

Contents

Preface	xiii
Nomenclature	xvii
1 Introduction to Fire	1
1.1 Fire in History	1
1.2 Fire and Science	2
1.3 Fire Safety and Research in the Twentieth Century	8
1.4 Outlook for the Future	10
1.5 Introduction to This Book	11
1.5.1 Thermodynamics	13
1.5.2 Fluid mechanics	14
1.5.3 Heat and mass transfer	15
1.5.4 Supportive references	16
References	17
Problems	17
2 Thermochemistry	19
2.1 Introduction	19
2.2 Chemical Reactions	20
2.3 Gas Mixture	23
2.4 Conservation Laws for Systems	25
2.4.1 Constant pressure reaction	27
2.4.2 Heat of combustion	28
2.4.3 Adiabatic flame temperature	29
2.5 Heat of Formation	30
2.6 Application of Mass and Energy Conservation in Chemical Reactions	31
2.7 Combustion Products in Fire	35
References	41
Problems	41
3 Conservation Laws for Control Volumes	49
3.1 Introduction	49
3.2 The Reynolds Transport Theorem	50

3.3	Relationship between a Control Volume and System Volume	53
3.4	Conservation of Mass	54
3.5	Conservation of Mass for a Reacting Species	56
3.6	Conservation of Momentum	59
3.7	Conservation of Energy for a Control Volume	61
	Problems	70
4	Premixed Flames	77
4.1	Introduction	77
4.2	Reaction Rate	78
4.3	Autoignition	80
4.4	Piloted Ignition	85
4.5	Flame Speed, S_u	88
4.5.1	Measurement techniques	89
4.5.2	Approximate theory	90
4.5.3	Fuel lean results	93
4.5.4	Heat loss effects and extinction	93
4.6	Quenching Diameter	95
4.7	Flammability Limits	98
4.8	Empirical Relationships for the Lower Flammability Limit	102
4.9	A Quantitative Analysis of Ignition, Propagation and Extinction	105
4.9.1	Autoignition calculations	105
4.9.2	Piloted ignition calculations	107
4.9.3	Flame propagation and extinction calculations	107
4.9.4	Quenching diameter calculations	108
	References	109
	Problems	110
5	Spontaneous Ignition	117
5.1	Introduction	117
5.2	Theory of Spontaneous Ignition	119
5.3	Experimental Methods	124
5.4	Time for Spontaneous Ignition	127
	References	130
	Problems	131
6	Ignition of Liquids	135
6.1	Introduction	135
6.2	Flashpoint	135
6.3	Dynamics of Evaporation	137
6.4	Clausius–Clapeyron Equation	141
6.5	Evaporation Rates	146
	References	154
	Problems	154
7	Ignition of Solids	159
7.1	Introduction	159

7.2	Estimate of Ignition Time Components	161
7.2.1	Chemical time	161
7.2.2	Mixing time	162
7.2.3	Pyrolysis	163
7.3	Pure Conduction Model for Ignition	164
7.4	Heat Flux in Fire	166
7.4.1	Typical heat flux levels	166
7.4.2	Radiation properties of surfaces in fire	167
7.4.3	Convective heating in fire	167
7.4.4	Flame radiation	169
7.4.5	Heat flux measurements	170
7.4.6	Heat flux boundary conditions	170
7.5	Ignition in Thermally Thin Solids	171
7.5.1	Criterion for thermally thin	171
7.5.2	Thin theory	172
7.5.3	Measurements for thin materials	174
7.6	Ignition of a Thermally Thick Solid	176
7.6.1	Thick theory	176
7.6.2	Measurements for thick materials	180
7.6.3	Autoignition and surface ignition	182
7.7	Ignition Properties of Common Materials	184
	References	188
	Problems	188
8	Fire Spread on Surfaces and Through Solid Media	191
8.1	Introduction	191
8.2	Surface Flame Spread – The Thermally Thin Case	194
8.3	Transient Effects	198
8.4	Surface Flame Spread for a Thermally Thick Solid	200
8.5	Experimental Considerations for Solid Surface Spread	202
8.5.1	Opposed flow	202
8.5.2	Wind-aided	207
8.6	Some Fundamental Results for Surface Spread	210
8.7	Examples of Other Flame Spread Conditions	213
8.7.1	Orientation effects	213
8.7.2	Porous media	215
8.7.3	Liquid flame spread	216
8.7.4	Fire spread through a dwelling	217
	References	219
	Problems	220
9	Burning Rate	227
9.1	Introduction	227
9.2	Diffusive Burning of Liquid Fuels	233
9.2.1	Stagnant layer	233
9.2.2	Stagnant layer solution	237
9.2.3	Burning rate – an eigenvalue	241

9.3	Diffusion Flame Variables	243
9.3.1	Concentrations and mixture fractions	243
9.3.2	Flame temperature and location	246
9.4	Convective Burning for Specific Flow Conditions	248
9.5	Radiation Effects on Burning	255
9.6	Property Values for Burning Rate Calculations	259
9.7	Suppression and Extinction of Burning	261
9.7.1	Chemical and physical factors	261
9.7.2	Suppression by water and diluents	262
9.8	The Burning Rate of Complex Materials	267
9.9	Control Volume Alternative to the Theory of Diffusive Burning	269
9.9.1	Condensed phase	271
9.9.2	Gas phase	274
9.10	General Considerations for Extinction Based on Kinetics	277
9.10.1	A demonstration of the similarity of extinction in premixed and diffusion flames	279
9.11	Applications to Extinction for Diffusive Burning	281
	References	285
	Problems	286
10	Fire Plumes	297
10.1	Introduction	297
10.2	Buoyant Plumes	302
10.2.1	Governing equations	302
10.2.2	Plume characteristic scales	306
10.2.3	Solutions	308
10.3	Combusting Plumes	311
10.4	Finite Real Fire Effects	313
10.4.1	Turbulent axial flame temperatures	313
10.4.2	Plume temperatures	317
10.4.3	Entrainment rate	319
10.4.4	Flame height	322
10.4.5	Jet flames	323
10.4.6	Flame heights for other geometries	325
10.5	Transient Aspects of Fire Plumes	326
10.5.1	Starting plume	327
10.5.2	Fireball or thermal	328
	References	332
	Problems	334
11	Compartment Fires	339
11.1	Introduction	339
11.1.1	Scope	340
11.1.2	Phases of fires in enclosures	340
11.2	Fluid Dynamics	342
11.2.1	General flow pattern	342
11.2.2	Vent flows	343

11.3 Heat Transfer	347
11.3.1 Convection	348
11.3.2 Conduction	348
11.3.3 Radiation	349
11.3.4 Overall wall heat transfer	351
11.3.5 Radiation loss from the vent	351
11.4 Fuel Behavior	352
11.4.1 Thermal effects	352
11.4.2 Ventilation effects	353
11.4.3 Energy release rate (firepower)	354
11.5 Zone Modeling and Conservation Equations	355
11.5.1 Conservation relationships	356
11.5.2 Dimensionless factors in a solution	357
11.6 Correlations	358
11.6.1 Developing fires	358
11.6.2 Fully developed fires	360
11.7 Semenov Diagrams, Flashover and Instabilities	365
11.7.1 Fixed area fire	366
11.7.2 Second item ignition	366
11.7.3 Spreading fires	368
References	369
Problems	370
12 Scaling and Dimensionless Groups	377
12.1 Introduction	377
12.2 Approaches for Establishing Dimensionless Groups	378
12.2.1 Buckingham pi method	379
12.2.2 Partial differential equation (PDE) method	379
12.2.3 Dimensional analysis	380
12.3 Dimensionless Groups from the Conservation Equations	380
12.3.1 Conservation of mass	381
12.3.2 Conservation of momentum	381
12.3.3 Energy equation	382
12.3.4 Heat losses	384
12.3.5 Mass flows	385
12.3.6 Liquid droplets	386
12.3.7 Chemical species	388
12.3.8 Heat flux and inconsistencies	389
12.3.9 Summary	392
12.4 Examples of Specific Correlations	394
12.4.1 Plume interactions with a ceiling	395
12.4.2 Smoke filling in a leaky compartment	396
12.4.3 Burning rate	397
12.4.4 Compartment fire temperature	398
12.4.5 Effect of water sprays on fire	400

xii CONTENTS

12.5 Scale Modeling	401
12.5.1 Froude modeling	402
12.5.2 Analog scaling methods	403
References	407
Appendix	409
Flammability Properties	409
Archibald Tewarson	409
Index	435
