

# Contents

<b>Preface</b>		<b>ix</b>
<b>Chapter 1</b>	<b>Introduction</b>	<b>1</b>
<b>Chapter 2</b>	<b>The Survey and Its Imperfections</b>	<b>5</b>
	2.1 The survey objective	5
	2.2 Sources of error in a survey	8
<b>Chapter 3</b>	<b>General Principles to Assist Estimation</b>	<b>17</b>
	3.1 Introduction	17
	3.2 The importance of auxiliary information	19
	3.3 Desirable features of an auxiliary vector	22
<b>Chapter 4</b>	<b>The Use of Auxiliary Information under Ideal Conditions</b>	<b>29</b>
	4.1 Introduction	29
	4.2 The Horvitz–Thompson estimator	32
	4.3 The generalized regression estimator	33
	4.4 Variance and variance estimation	35
	4.5 Examples of the generalized regression estimator	39
<b>Chapter 5</b>	<b>Introduction to Estimation in the Presence of Nonresponse</b>	<b>43</b>
	5.1 General background	43
	5.2 Errors caused by sampling and nonresponse	44
	Appendix: Variance and mean squared error under nonresponse	47

<b>Chapter 6</b>	<b>Weighting of Data in the Presence of Nonresponse</b>	<b>49</b>
6.1	Traditional approaches to weighting	49
6.2	Auxiliary vectors and auxiliary information	53
6.3	The calibration approach: some terminology	56
6.4	Point estimation under the calibration approach	57
6.5	Calibration estimators for domains	59
6.6	Comments on the calibration approach	60
6.7	Alternative sets of calibrated weights	62
6.8	Properties of the calibrated weights	64
<b>Chapter 7</b>	<b>Examples of Calibration Estimators</b>	<b>67</b>
7.1	Examples of familiar estimators for data with nonresponse	67
7.2	The simplest auxiliary vector	68
7.3	One-way classification	68
7.4	A single quantitative auxiliary variable	71
7.5	One-way classification combined with a quantitative variable	73
7.6	Two-way classification	74
7.7	A Monte Carlo simulation study	75
<b>Chapter 8</b>	<b>The Combined Use of Sample Information and Population Information</b>	<b>81</b>
8.1	Options for the combined use of information	81
8.2	An example of calibration with information at both levels	83
8.3	A Monte Carlo simulation study of alternative calibration procedures	87
8.4	Two-step procedures in practice	88
<b>Chapter 9</b>	<b>Analysing the Bias due to Nonresponse</b>	<b>91</b>
9.1	Simple estimators and their nonresponse bias	91
9.2	Finding an efficient grouping	94
9.3	Further illustrations of the nonresponse bias	96
9.4	A general expression for the bias of the calibration estimator	98
9.5	Conditions for near-unbiasedness	101
9.6	A review of concepts, terms and ideas	103
	Appendix: Proof of Proposition 9.1	106

<b>Chapter 10</b>	<b>Selecting the Most Relevant Auxiliary Information</b>	<b>109</b>
10.1	Discussion	109
10.2	Guidelines for the construction of an auxiliary vector	110
10.3	The prospects for near-zero bias with traditional estimators	111
10.4	Further avenues towards a zero bias	115
10.5	A further tool for reducing the bias	116
10.6	The search for a powerful auxiliary vector	117
10.7	Empirical illustrations of the indicators	122
10.8	Literature review	129
<b>Chapter 11</b>	<b>Variance and Variance Estimation</b>	<b>135</b>
11.1	Variance estimation for the calibration estimator	135
11.2	An estimator for ideal conditions	139
11.3	A useful relationship	140
11.4	Variance estimation for the two-step A and two-step B procedures	142
11.5	A simulation study of the variance estimation technique	144
11.6	Computational aspects of point and variance estimation	149
	Appendix: Properties of two-phase GREG estimator	150
<b>Chapter 12</b>	<b>Imputation</b>	<b>153</b>
12.1	What is imputation?	153
12.2	Terminology	154
12.3	Multiple study variables	156
12.4	The full imputation approach	156
12.5	The combined approach	158
12.6	The full weighting approach	159
12.7	Imputation by statistical rules	160
12.8	Imputation by expert judgement or historical data	164
<b>Chapter 13</b>	<b>Variance Estimation in the Presence of Imputation</b>	<b>167</b>
13.1	Issues in variance estimation under the full imputation approach	167
13.2	An identity of combined and fully weighted approaches	169
13.3	More on the risk of underestimating the variance	172

13.4	A broader view of variance estimation for the combined approach	173
13.5	Other issues arising with regard to item nonresponse	175
13.6	Further comments on imputation	175
	Appendix: Proof of Proposition 13.1	176
<b>Chapter 14</b>	<b>Estimation Under Nonresponse and Frame Imperfections</b>	<b>179</b>
14.1	Introduction	179
14.2	Estimation of the persister total	182
14.3	Direct estimation of the target population total	184
14.4	A case study	186
