Introduction	xxv
Part I: Production-Ready Software	
Chapter 1: “Production” Readiness	3
What Is Production Readiness?	4
Applications Must Be Fit for Purpose	10
Environments Must Be Fit for Purpose	14
Processes and Tools Must Be Fit for Purpose	18
Users Must Be Trained	20
Why Is Production Readiness Important?	23
The Production-Readiness “Process”	26
The Project Management Triangle	27
Summary	31
Chapter 2: The Quality Landscape	35
The Quality Characteristics	36
Why Quality (and Scope) Matter	40
Construction Quality Echoes throughout the Project	41
Defects Affect Testing and Ongoing Development	53
Fixing Defects Quickly Can Reduce Quality	54
When Quality Drops, Sweeping Is Left	56
More Tips for Improving and Maintaining Quality	57
Quality Comes at a Price	61
Calculating the Potential Cost of Defects	61
Basic Financial Analysis	64
Estimates and Estimating	71
Summary	76
Chapter 3: Preparing for “Production”	79
Preparation Is Paramount	80
Breaking Down the Activities	82
Identifying the Constraints	83

Contents

Development Mobilization	90
Defining the Development Scope	90
Defining the Inputs	93
Defining the Process	96
Defining the Templates and Exemplars	100
Wrapping It Up	101
Build, Release, and Regular Integration Mobilization	102
Test Mobilization	105
Defect Management (and Fix) Mobilization	110
Defining Process Constraints	110
Defining the Process	111
Configuration Management Mobilization	125
Defining Process Constraints	125
Change Control Mobilization	132
Summary	133
Chapter 4: The Ins and Outs of Construction	137
Thinking Out-of-the-Box	139
The “Back of the Box”	139
The “Media”	140
The “User Guide”	140
The “Operations Manual”	141
Considering the Design	141
Accessibility Considerations	149
Implementation Considerations	150
Support and Maintenance Considerations	152
Custom Built vs. Off-the-Shelf	152
General Design Considerations	154
The Analysis and Design Outputs	160
Scope	160
Requirements	161
Use-Case Diagrams and Use Cases	166
Navigation Maps	173
Storyboards	174
Page Layouts and Specifications	178
The Data Dictionary	180
Architecture and Application Component Specifications	182
Summary	192

Part II: The Production Landscape

Chapter 5: The Production Environment 197

The Big Picture 198

The Demilitarized Zone 200

The Solution Architecture Hardware Components 201

The Operations Architecture Hardware Components 202

The Hardware Topology 203

Individual Server Configuration 203

High Availability and Fault Tolerance 205

Using a Shared Storage Area 211

Network Segmentation 213

The Software Topology 214

Master-Agent Architecture 219

The Primary and Secondary Data Centers 220

The Primary Data Center 223

The Secondary Data Center 223

Active-Passive Primary and Secondary 223

Active-Active Primary and Secondary 226

Summary 227

Chapter 6: Activities and Environments 229

The Types of Testing 230

Acceptance Testing 231

Technical Testing 232

Functional Testing 235

Regression Testing 236

Testing in the “Production” Environments 238

The Primary Site Environment 238

The Secondary Site Environment 239

The Pre-Production Environment 240

Summary 241

Chapter 7: Service Delivery and Operations 243

The Three Levels of Live Service Support 244

The Scope of Support 246

The Role of the Operations Team 247

The Role of the Service Delivery Team 248

Contents

The Operations Manual	252
Planning the Architecture	254
Installation and Configuration	259
Maintenance and Administration	260
Summary	261
<hr/> Chapter 8: Monitoring and Alerts	<hr/> 263
What Is Monitoring?	263
Monitoring Requirements and Rules	269
Blackout Windows	269
What Is Monitored?	270
Custom Performance Counters	272
Custom Events	272
Custom Processes	272
What Are Alerts?	273
Summary	274
<hr/> Chapter 9: Reporting and Analytics	<hr/> 275
Reporting Overview	276
The Reporting Architecture	281
Technical Reporting	283
Analytics Overview	284
Summary	285
<hr/> Chapter 10: Batch	<hr/> 289
Batch Processing	289
The Batch Window	294
The Batch Scheduler	295
Batch Jobs	296
Batch Schedules	298
Nodes and Node Groups	300
Batch for Batch Sake	301
The Batch Run Date	302
Summary	303
<hr/> Chapter 11: Incident Investigation	<hr/> 305
The Investigation Roadmap	306
Investigating the Incident	309
Re-Creating the Incident	312

Verifying the Incident and the Proposed Resolution	312
Implementing the Resolution	313
Typical Incidents	313
Summary	315

Chapter 12: Application Maintenance **317**

The Application Maintenance Team	318
Application Maintenance Functions	319
Incident Investigation and Fix-On-Fail	319
Application Enhancements and Changes	322
Release and Configuration Management	323
The Developer’s Guide	324
Summary	326

Part III: Case Study

Chapter 13: Conceptual Design **329**

The Guiding Principles	331
Online Application Walkthrough	331
The Welcome Page	335
The My Account Page	336
SB-001 Create New Account	337
SB-002 Activate Account	339
SB-003 Re-Request Activation Key	342
SB-004 Login	344
SB-005 Logout	345
SB-006 Reset Password	345
SB-007 Change Password	346
SB-008 Update Account	348
SB-009 Close Account	349
Defining the Requirements	350
Functional Requirements	350
Technical Requirements	370
Documenting the Use Cases	372
UC-001 Create New Account	372
UC-002 Activate Account	375
UC-003 Re-Request Activation Key	377
UC-004 Login	379
UC-005 Logout	381
UC-006 Reset Password	382

Contents

UC-007 Change Password	384
UC-008 Update Account	388
UC-009 Close Account	390
Summary	392
Chapter 14: Planning the Architecture	395
The Conceptual Architecture	396
The Logical Layers	397
The Production Deployment Concept	407
High-Level Transaction Flow	408
The Presentation Tier	411
The Web Service Façade	414
The Business Processing Components	416
The Business Components	417
The Business Framework Components	422
The Batch Processes	424
The Logical Data Model and Data Access	426
Data Entities	427
Data Access	428
The Reporting Components	428
Logical Component Model	428
Summary	430
Chapter 15: Modeling the Application	433
Component Responsibility Modeling	434
Adding the Inputs and Outputs	439
Looking for Repeating Patterns	445
Modeling the Flows	445
Modeling the Batch Jobs	455
The Solicited E-mail Batch Jobs	455
The Account Cleanup Jobs	461
The Reporting Components	463
Summary	465
Part IV: Patterns and Practices	
Chapter 16: Designing for Batch	469
The Batch Architecture	470
An Execution and Control Framework	472

The BatchJobFactory Class	474
Batch Job Execution Flow	476
Progress Reporting	482
Controlling Processes	486
Multiple Threads and Multiple Jobs	488
Multi-Threaded Jobs	489
Multiple Jobs	492
Batch Job Parameters	495
Generic Jobs and Generic Functionality	497
Summary	499
Chapter 17: Designing for Reporting	501
<hr/>	
Maintaining Meaningful Data	501
Using Lookup Tables	502
Recording Dates and Times	505
Maintaining Transaction Counts	507
Defining the Master Data Set	509
Providing an Audit Trail	509
Summary	515
Chapter 18: Designing for Performance	517
<hr/>	
Tuning the Database Layer	518
Indexing Tables	518
Partitioning Tables and Data	520
Optimizing Queries	522
Caching	522
Tuning the “Application” Layer	523
Avoiding Unnecessary Method Calls	523
Object Recycling and Pooling	525
Application Caching	527
Performing Bulk Operations	528
Optimizing Method Processing	528
Summary	529
Chapter 19: Designing for Resilience	531
<hr/>	
Human Error and User Behavior	531
Managing Configuration Changes	532
Supporting and Controlling User Behavior	533

Contents

Handling System Failure	543
Exception Handling Should Never Be an Afterthought	544
Have an Exception Handling Strategy	548
Handle Exceptions Where You Can	550
Add Value When You Can't "Handle"	554
Exceptions Lead to Operational Procedures	556
Non-Stop Processing	557
Summary	558
Chapter 20: Designing for Monitoring	559
Performance Counters	560
Counters — The Good, the Bad, and the Ugly	562
Counters — What, When, and Why	563
Intermittent Counter Updates	568
Thresholds and Tolerances	569
Events and Event Logs	570
Event Types	572
Event Log Entries — The Good, the Bad, and the Ugly	575
Monitoring Configuration	576
Performance Counter Configuration	576
Event Configuration	577
Summary	578
Chapter 21: Designing for Incident Investigation	579
Tracing	580
Activity-Based Tracing	588
Using Multiple Trace Files	590
Tracing Configuration	591
Investigative Tooling	593
Summary	594
Chapter 22: Designing for Application Maintenance	595
Preparing the Solution	596
Defining the Folders and Projects	596
Defining the Project Settings	598
Defining the Standards	600
XML Documentation Comments	601
Commenting Standards	603
Coding Standards and Practices	609

Supporting Configurability	610
Application-Specific Configuration Settings	611
Static Page Elements	615
Validation Rules	616
Messages	617
Summary	618
Chapter 23: Designing for Testing	621
Developer Testing Activities	622
Examining the Factory Pattern	628
Using Stubs and Simulators	633
Summary	635
Chapter 24: Designing for Deployment	637
Splitting Out Test Materials	638
Separating the Components	639
Classifying the Releases	641
Summary	645
Part V: Conclusion	
Chapter 25: Review and Wrap-Up	649
Back to the Real World	649
Application Maintenance	651
Testing	655
Onwards and Upwards	658
Index	659
