

## Contents

	<b>Preface</b>	XV
	<b>List of Contributors</b>	XXI
<b>I</b>	<b>Self-Assembly and Nanoparticles: Novel Principles</b>	<b>1</b>
<b>1</b>	<b>Self-Assembled Artificial Transmembrane Ion Channels</b>	<b>3</b>
	<i>Mary S. Gin, Emily G. Schmidt, and Pinaki Talukdar</i>	
1.1	Overview	3
1.1.1	Non-Gated Channels	3
1.1.1.1	Aggregates	4
1.1.1.2	Half-Channel Dimers	5
1.1.1.3	Monomolecular Channels	5
1.1.2	Gated Channels	6
1.1.2.1	Light-Gated Channels	7
1.1.2.2	Voltage-Gated Channels	7
1.1.2.3	Ligand-Gated Channels	9
1.2	Methods	10
1.2.1	Planar Bilayers	10
1.2.2	Vesicles	11
1.2.2.1	<sup>23</sup> Na NMR	11
1.2.2.2	pH-Stat	11
1.2.2.3	Fluorescence	12
1.2.2.4	Ion-Selective Electrodes	12
1.3	Outlook	12
	References	12
<b>2</b>	<b>Self-Assembling Nanostructures from Coiled-Coil Peptides</b>	<b>17</b>
	<i>Maxim G. Ryadnov and Derek N. Woolfson</i>	
2.1	Background and Overview	17
2.1.1	Introduction: Peptides in Self-Assembly	17
2.1.2	Coiled-Coil Peptides as Building Blocks in Supramolecular Design	18
2.1.3	Coiled-Coil Design in General	20

2.2	Methods and Examples	20
2.2.1	Ternary Coiled-Coil Assemblies and Nanoscale-Linker Systems	20
2.2.2	Fibers Assembled Using Linear Peptides	22
2.2.3	Fibers Assembled Using Protein Fragments and Nonlinear Peptide Building Blocks	26
2.2.4	Summary: Pros and Cons of Peptide-Based Assembly of Nanofibers	27
2.2.5	Assembling More-Complex Matrices Using Peptide Assemblies as Linker Struts	30
2.2.5.1	Programmed Matrices Assembled Exclusively from Coiled-Coil Building Blocks	30
2.2.5.2	Synthetic Polymer-Coiled-Coil Hybrids	31
2.2.6	Key Techniques	33
2.3	Conclusions and Perspectives	34
	References	35
<b>3</b>	<b>Synthesis and Assembly of Nanoparticles and Nanostructures Using Bio-Derived Templates</b>	<b>39</b>
	<i>Erik Dujardin and Stephen Mann</i>	
3.1	Introduction: Elegant Complexity	39
3.2	Polysaccharides, Synthetic Peptides, and DNA	40
3.3	Proteins	44
3.4	Viruses	48
3.5	Microorganisms	54
3.6	Outlook	56
	Acknowledgments	58
	References	58
<b>4</b>	<b>Proteins and Nanoparticles: Covalent and Noncovalent Conjugates</b>	<b>65</b>
	<i>Rochelle R. Arvizo, Mrinmoy De, and Vincent M. Rotello</i>	
4.1	Overview	65
4.1.1	Covalent Protein-Nanoparticle Conjugates	66
4.1.2	Noncovalent Protein-NP Conjugation	69
4.2	Methods	72
4.2.1	General Methods for Noncovalent Protein-NP Conjugation	72
4.2.2	General Methods for Covalent Protein-NP Conjugation	74
4.3	Outlook	75
	References	75
<b>5</b>	<b>Self-Assembling DNA Nanostructures for Patterned Molecular Assembly</b>	<b>79</b>
	<i>Thomas H. LaBean, Kurt V. Gothelf, and John H. Reif</i>	
	Abstract	79
5.1	Introduction	79
5.2	Overview of DNA Nanostructures	80

5.3	Three-Dimensional (3-D) DNA Nanostructures	84
5.4	Programmed Patterning of DNA Nanostructures	84
5.5	DNA-Programmed Assembly of Biomolecules	87
5.6	DNA-Programmed Assembly of Materials	89
5.7	Laboratory Methods	91
5.7.1	Annealing for DNA Assembly	92
5.7.2	AFM Imaging	93
5.8	Conclusions	93
	Acknowledgments	94
	References	94
<b>6</b>	<b>Biocatalytic Growth of Nanoparticles for Sensors and Circuitry</b>	<b>99</b>
	<i>Ronan Baron, Bilha Willner, and Itamar Willner</i>	
6.1	Overview	99
6.1.1	Enzyme-Stimulated Synthesis of Metal Nanoparticles	100
6.1.2	Enzyme-Stimulated Synthesis of Cupric Ferrocyanide Nanoparticles	107
6.1.3	Cofactor-Induced Synthesis of Metallic NPs	107
6.1.4	Enzyme–Metal NP Hybrid Systems as “Inks” for the Synthesis of Metallic Nanowires	113
6.2	Methods	115
6.2.1	Physical Tools to Characterize the Growth of Nanoparticles and Nanowires	115
6.2.2	General Procedure for Monitoring the Biocatalytic Enlargement of Metal NPs in Solutions	116
6.2.3	Modification of Surfaces with Metal NPs and their Biocatalytic Growth for Sensing	116
6.2.4	Modification of Enzymes with NPs and their Use as Biocatalytic Templates for Metallic Nanocircuitry	117
6.3	Outlook	117
	References	118
<b>II</b>	<b>Nanostructures for Analytics</b>	<b>123</b>
<b>7</b>	<b>Nanoparticles for Electrochemical Bioassays</b>	<b>125</b>
	<i>Joseph Wang</i>	
7.1	Overview	125
7.1.1	Particle-Based Bioassays	125
7.1.2	Electrochemical Bioaffinity Assays	125
7.1.3	NP-Based Electrochemical Bioaffinity Assays	126
7.1.3.1	Gold and Silver Metal Tags for Electrochemical Detection of DNA and Proteins	126
7.1.3.2	NP-Induced Conductivity Detection	129
7.1.3.3	Inorganic Nanocrystal Tags: Towards Electrical Coding	130
7.1.3.4	Use of Magnetic Beads	133

7.1.3.5	Ultrasensitive Particle-Based Assays Based on Multiple Amplification Schemes	134
7.2	Methods	136
7.3	Outlook	137
	Acknowledgments	138
	References	138
<b>8</b>	<b>Luminescent Semiconductor Quantum Dots in Biology</b>	<b>141</b>
	<i>Thomas Pons, Aaron R. Clapp, Igor L. Medintz, and Hedi Mattoussi</i>	
8.1	Overview	141
8.1.1	QD Bioconjugates in Cell and Tissue Imaging	142
8.1.2	Quantum Dots in Immuno- and FRET-Based Assays	146
8.2	Methods	150
8.2.1	Synthesis, Characterization, and Capping Strategies	150
8.2.2	Water-Solubilization Strategies	151
8.2.3	Conjugation Strategies	151
8.3	Future Outlook	152
	Acknowledgments	153
	References	153
<b>9</b>	<b>Nanoscale Localized Surface Plasmon Resonance Biosensors</b>	<b>159</b>
	<i>Katherine A. Willets, W. Paige Hall, Leif J. Sherry, Xiaoyu Zhang, Jing Zhao, and Richard P. Van Duyne</i>	
9.1	Overview	159
9.2	Methods	162
9.2.1	Nanofabrication of Materials for LSPR Spectroscopy and Sensing	162
9.2.1.1	Film Over Nanowells	163
9.2.1.2	Solution-Phase NSL-Fabricated Nanotriangles	164
9.2.1.3	Silver Nanocubes	166
9.2.2	Biosensing	167
9.3	Outlook	168
	Acknowledgments	169
	References	169
<b>10</b>	<b>Cantilever Array Sensors for Bioanalysis and Diagnostics</b>	<b>175</b>
	<i>Hans Peter Lang, Martin Hegner, and Christoph Gerber</i>	
10.1	Overview	175
10.1.1	Cantilevers as Sensors	176
10.1.2	Measurement Principle	177
10.1.3	Cantilevers: Application Fields	179
10.2	Methods	180
10.2.1	Measurement Modes	180
10.2.2	Cantilever Functionalization	181
10.2.3	Experimental Procedure	184
10.3	Outlook	186

10.3.1	Recent Literature	186
10.3.2	Challenges	188
	Acknowledgments	189
	References	190
<b>11</b>	<b>Shear-Force-Controlled Scanning Ion Conductance Microscopy</b>	<b>197</b>
	<i>Tilman E. Schäffer, Boris Anczykowski, Matthias Böcker, and Harald Fuchs</i>	
11.1	Overview	197
11.2	Methods	202
11.2.1	Shear-Force Detection	202
11.2.2	Ion Current Measurement	204
11.2.3	Shear-Force-Controlled Imaging	205
11.3	Outlook	207
	Acknowledgments	209
	References	209
<b>12</b>	<b>Label-Free Nanowire and Nanotube Biomolecular Sensors for In-Vitro Diagnosis of Cancer and other Diseases</b>	<b>213</b>
	<i>James R. Heath</i>	
12.1	Overview	213
12.2	Background	213
12.3	Methods and Current State of the Art	216
12.3.1	Mechanisms of Sensing	216
12.3.2	The Role of the Sensing Environment	218
12.3.3	Nanosensor-Measured Antigen–Analyte On/Off Binding Rates	219
12.3.4	The Nanosensor/Microfluidic Environment	222
12.3.5	Nanosensor Fabrication	223
12.3.6	Biofunctionalizing NW and NT Nanosensors	226
12.4	Outlook	227
	Acknowledgments	227
	References	228
<b>13</b>	<b>Bionanoarrays</b>	<b>233</b>
	<i>Rafael A. Vega, Khalid Salaita, Joseph J. Kakkassery, and Chad A. Mirkin</i>	
13.1	Overview	233
13.2	Methods	234
13.2.1	Atomic Force Microscope-Based Methods	234
13.2.2	Nanopipet Deposition	237
13.2.3	Beam-Based Methods	238
13.2.4	Contact Printing	240
13.2.5	Assembly-Based Patterning	241
13.3	Protein Nanoarrays	242
13.3.1	Strategies for Immobilizing Proteins on Nanopatterns	243
13.3.2	Bio-Analytical Applications	244
13.3.3	Dynamic and Motile Nanoarrays	246

13.3.4	Cell-Surface Interactions	246
13.4	DNA Nanoarrays	249
13.4.1	Strategies for Preparing DNA Nanoarrays	249
13.4.2	DNA-Based Schemes for Biodetection	250
13.4.3	Applications of Rationally Designed, Self-Assembled 2-D DNA Nanoarrays	251
13.5	Virus Nanoarrays	253
13.6	Outlook	254
	References	254
<b>III</b>	<b>Nanostructures for Medicinal Applications</b>	<b>261</b>
<b>14</b>	<b>Biological Barriers to Nanocarrier-Mediated Delivery of Therapeutic and Imaging Agents</b>	<b>263</b>
	<i>Rudy Juliano</i>	
14.1	Overview: Nanocarriers for Delivery of Therapeutic and Imaging Agents	263
14.2	Basic Characteristics of the Vasculature and Mononuclear Phagocyte System	263
14.2.1	Possible Interactions of Nanocarriers Within the Bloodstream	264
14.2.2	Transendothelial Permeability in Various Tissues and Tumors	264
14.2.3	Mononuclear Cells and Particle Clearance	267
14.3	Cellular Targeting and Subcellular Delivery	268
14.3.1	Targeting, Entry, and Trafficking in Cells	268
14.3.2	Biological and Chemical Reagents for Cell-Specific Targeting	271
14.3.3	Reagents that Promote Cell Entry	272
14.4	Crafting NPs for Delivery: Lessons from Liposomes	273
14.4.1	Loading	273
14.4.2	Release Rates	273
14.4.3	Size and Charge	274
14.4.4	PEG and the Passivation of Surfaces	274
14.4.5	Decoration with Ligands	275
14.5	Biodistribution of Liposomes, Dendrimers, and NPs	276
14.6	The Toxicology of Nanocarriers	277
14.7	Summary	278
	References	278
<b>15</b>	<b>Organic Nanoparticles: Adapting Emerging Techniques from the Electronics Industry for the Generation of Shape-Specific, Functionalized Carriers for Applications in Nanomedicine</b>	<b>285</b>
	<i>Larken E. Euliss, Julie A. DuPont, and Joseph M. DeSimone</i>	
15.1	Overview	285
15.2	Methods	288
15.2.1	Bottom-Up Approaches for the Synthesis of Organic Nanoparticles	288

- 15.2.2 Top-Down Approaches for the Fabrication of Polymeric Nanoparticles 291
  - 15.2.2.1 Microfluidics 291
  - 15.2.2.2 Photolithography 292
  - 15.2.2.3 Imprint Lithography 294
  - 15.2.2.4 IRINT 295
- 15.3 Outlook 297
  - References 299
  
- 16 Poly(amidoamine) Dendrimer-Based Multifunctional Nanoparticles 305**  
*Thommey P. Thomas, Rameshwer Shukla, Istvan J. Majoros, Andrzej Myc, and James R. Baker, Jr.*
  - 16.1 Overview 305
    - 16.1.1 PAMAM Dendrimers: Structure and Biological Properties 306
    - 16.1.2 PAMAM Dendrimers as a Vehicle for Molecular Delivery into Cells 308
      - 16.1.2.1 PAMAM Dendrimers as Encapsulation Complexes 308
      - 16.1.2.2 Multifunctional Covalent PAMAM Dendrimer Conjugates 308
      - 16.1.2.3 PAMAM Dendrimers as MRI Contrast Agents 312
      - 16.1.2.4 Application of Multifunctional Clusters of PAMAM Dendrimer 312
    - 16.2 Methods 313
      - 16.2.1 Synthesis and Characterization of PAMAM Dendrimers 313
      - 16.2.2 PAMAM Dendrimer: Determination of Physical Parameters 315
      - 16.2.3 Quantification of Fluorescence of Targeted PAMAM Conjugates 315
    - 16.3 Outlook 316
      - References 316
  
- 17 Nanoparticle Contrast Agents for Molecular Magnetic Resonance Imaging 321**  
*Young-wook Jun, Jae-Hyun Lee, and Jinwoo Cheon*
  - 17.1 Introduction 321
  - 17.2 NP-Assisted MRI 322
    - 17.2.1 Magnetic NP Contrast Agents 323
      - 17.2.1.1 Silica- or Dextran-Coated Iron Oxide Contrast Agents 325
      - 17.2.1.2 Magnetoferritin 327
      - 17.2.1.3 Magnetodendrimers and Magnetoliposomes 327
      - 17.2.1.4 Non-Hydrolytically Synthesized High-Quality Iron Oxide NPs: A New Type of Contrast Agent 328
    - 17.2.2 Iron Oxide NPs in Molecular MR Imaging 331
      - 17.2.2.1 Infarction and Inflammation 332
      - 17.2.2.2 Angiogenesis 333
      - 17.2.2.3 Apoptosis 334
      - 17.2.2.4 Gene Expression 335
      - 17.2.2.5 Cancer Imaging 337
  - 17.3 Outlook 340

Acknowledgments 342  
References 342

**18 Micro- and Nanoscale Control of Cellular Environment for Tissue Engineering 347**

*Ali Khademhosseini, Yibo Ling, Jeffrey M. Karp, and Robert Langer*

- 18.1 Overview 347
- 18.1.1 Cell–Substrate Interactions 347
- 18.1.2 Cell Shape 350
- 18.1.3 Cell–Cell Interactions 351
- 18.1.4 Cell-Soluble Factor Interactions 351
- 18.1.5 3-D Scaffolds 352
- 18.2 Methods 354
- 18.2.1 Soft Lithography 354
- 18.2.2 Self-Assembled Monolayers 356
- 18.2.3 Electrospinning 357
- 18.2.4 Nanotopography Generation 358
- 18.2.5 Layer-by-Layer Deposition 358
- 18.2.6 3D Printing 358
- 18.3 Outlook 359
- References 359

**19 Diagnostic and Therapeutic Targeted Perfluorocarbon Nanoparticles 365**

*Patrick M. Winter, Shelton D. Caruthers, Gregory M. Lanza, and Samuel A. Wickline*

- 19.1 Overview 365
- 19.2 Methods 367
- 19.2.1 Diagnostic Imaging 367
- 19.2.2 Targeted Therapeutics 371
- 19.2.3 Other Imaging Modalities 373
- 19.3 Outlook 374
- Acknowledgments 376
- References 376

**IV Nanomotors 381**

**20 Biological Nanomotors 383**

*Manfred Schliwa*

- 20.1 Overview 383
- 20.2 The Architecture of the Motor Domain 388
- 20.3 Initial Events in Force Generation 388
- 20.4 Stepping, Hopping, and Slithering 390
- 20.5 Directionality 393
- 20.6 Forces 394
- 20.7 Motor Interactions 395

20.8	Outlook	396
