Preface	XI
List of Contributors	XV
I Static Properties	1
1 Stress in Dense Granular Materials	3
<i>(I. Goldhirsch and C. Goldenberg)</i>	
1.1 Introduction	3
1.2 Continuum Mechanics: A Brief Review	4
1.3 Constitutive Relations for Dense Granular Materials	5
1.3.1 Engineering Approaches	5
1.3.2 Recent Approaches	6
1.3.3 Experiments and Possible Reconciliation	6
1.4 A Microscopic Approach	7
1.4.1 Displacement and Strain	8
1.4.2 Microscopic Derivation of Elasticity	9
1.5 Forces, Stress and Response Functions	10
1.5.1 Force Models	10
1.5.2 Force Chains, Stress, Elasticity and Friction	11
1.5.3 Force Statistics	19
1.6 Concluding Remarks	19
References	20
2 Response Functions in Isostatic Packings	23
<i>(C. F. Moukarzel)</i>	
2.1 Introduction	23
2.2 Rigidity Considerations for Contact Networks	24
2.2.1 Formulation	24
2.2.2 Network Rigidity	25
2.2.3 Isostaticity in the Limit of Large Stiffness to Load Ratio	27
2.3 Consequences of Isostaticity	28
2.3.1 Green Functions and the Virtual Work Principle	28
2.3.2 Anomalous Fluctuations: Multiplicative Noise in Isostatic Networks	29

2.4	Specific Examples	32
2.4.1	Topologically and Positionally Regular Isostatic Networks	33
2.4.2	Topologically Regular Isostatic Networks with Positional Disorder	33
2.4.3	Topologically Disordered Positionally Regular Isostatic Networks	35
2.4.4	Topologically and Positionally Disordered Isostatic Networks	36
2.4.5	Non-sequential Isostatic Networks	37
2.5	Discussion	39
	References	41
3	Statistical Mechanics of Jammed Matter	
	<i>(H. A. Makse, J. Brujić, and S. F. Edwards)</i>	45
3.1	Introduction to the Concept of Jamming	45
3.1.1	Jamming in Glassy Systems	46
3.1.2	Jamming in Particulate Systems	48
3.1.3	Unifying Concepts in Granular Matter and Glasses	51
3.2	New Statistical Mechanics for Granular Matter	53
3.2.1	Classical Statistical Mechanics	53
3.2.2	Statistical Mechanics for Jammed Matter	54
3.2.3	The Classical Boltzmann Equation	59
3.2.4	“Boltzmann Approach” to Granular Matter	61
3.3	Jamming with the Confocal	64
3.3.1	From Micromechanics to Thermodynamics	64
3.3.2	Model System	65
3.4	Jamming in a Periodic Box	72
3.4.1	Simulating Jamming	73
3.4.2	Testing the Thermodynamics	77
	References	83
II	Granular Gas	87
4	The Inelastic Maxwell Model	
	<i>(E. Ben-Naim and P. Krapivsky)</i>	89
4.1	Introduction	89
4.2	Uniform Gases: One Dimension	90
4.2.1	The Freely Cooling Case	90
4.2.2	The Forced Case	94
4.3	Uniform Gases: Arbitrary Dimension	96
4.3.1	The Freely Cooling Case	96
4.3.2	The Forced Case	100
4.3.3	Velocity Correlations	101
4.4	Impurities	102
4.4.1	Model A	103
4.4.2	Model B	106
4.4.3	Velocity Autocorrelations	108

4.5	Mixtures	108
4.6	Lattice Gases	109
4.7	Conclusions	111
	References	113
5	Cluster Formation in Compartmentalized Granular Gases	117
	<i>(K. van der Weele, R. Mikkelsen, D. van der Meer, and D. Lohse)</i>	
5.1	Introduction	117
5.2	The Vertically Vibrated Experiment	119
5.3	Eggers' Flux Model	121
5.4	Extension to More than two Compartments	124
5.5	Urn Model	127
5.6	Horizontally Vibrated System	132
5.7	Double Well Model	134
5.8	Further Directions	135
	References	136
III	Dense Granular Flow	141
6	Continuum Modeling of Granular Flow and Structure Formation	143
	<i>(I. S. Aranson and L. S. Tsimring)</i>	
6.1	Introduction	143
6.2	Order Parameter Description of Partially Fluidized Granular Flows	144
6.3	Avalanches on an Inclined Plane	147
	6.3.1 Stability of Simple Solution	148
	6.3.2 Avalanches in a Single-mode Approximation	149
	6.3.3 Comparison with Experiment	150
6.4	Fitting the Theory with Molecular Dynamics Simulations	152
	6.4.1 Order Parameter for Granular Fluidization: Static Contacts vs. Fluid Contacts	152
	6.4.2 Stress Tensor	153
	6.4.3 Couette Flow in a Thin Granular Layer	153
	6.4.4 Fitting the Constitutive Relation	154
6.5	Surface-driven Shear Granular Flow Under Gravity	155
6.6	Stick-Slips and Granular Friction	158
6.7	Conclusions	162
	References	163
7	Contact Dynamics Study of 2D Granular Media: Critical States and Relevant Internal Variables	165
	<i>(F. Radjai and S. Roux)</i>	
7.1	A Geometry–Mechanics Dialogue	165
7.2	A Granular Model	165
	7.2.1 Contact Dynamics	166
	7.2.2 Driving Modes	167

7.3	Macroscopic Continuum Description	168
7.3.1	Constitutive Framework	168
7.3.2	Relation Between Micro- and Macro-descriptors	169
7.3.3	Internal Variables	170
7.4	Numerical Results	171
7.4.1	Critical States	171
7.4.2	Stress–Strain Relation	174
7.4.3	Dilatancy	176
7.4.4	Internal Variables	179
7.4.5	Evolution of Internal Variables	181
7.4.6	Frictional/Collisional Dissipation	184
7.5	Conclusion	185
	References	186
8	Collision of Adhesive Viscoelastic Particles	
	<i>(N. V. Brilliantov and T. Pöschel)</i>	189
8.1	Introduction	189
8.2	Forces Between Granular Particles	190
8.2.1	Elastic Forces	190
8.2.2	Viscous Forces	193
8.2.3	Adhesion of Contacting Particles	196
8.3	Collision of Granular Particles	199
8.3.1	Coefficient of Restitution	199
8.3.2	Dimensional Analysis	200
8.3.3	Coefficient of Restitution for Spheres	202
8.3.4	Coefficient of Restitution for Adhesive Collisions	205
8.4	Conclusion	207
	References	208
IV	Hydrodynamic Interactions	211
9	Fluidized Beds: From Waves to Bubbles	
	<i>(É. Guazzelli)</i>	213
9.1	Introduction	213
9.2	Flow Regimes and Instabilities	214
9.3	Instability Mechanism	216
9.4	Governing Equations	218
9.5	Primary Instability	219
9.6	Rheology of the Particle Phase	222
9.7	Secondary Instability and the Formation of Bubbles	223
9.8	Conclusions	228
	References	229

10 Wind-blown Sand **233**
(H. J. Herrmann)

10.1 Introduction 233

10.2 The Wind Field 234

10.3 Aeolian Sand Transport 239

10.4 Dunes 246

10.5 Conclusion 249

References 250

V Charged and Magnetic Granular Matter **253**

11 Electrostatically Charged Granular Matter **255**
(S. M. Dammer, J. Werth, and H. Hinrichsen)

11.1 Introduction 255

11.2 Charged Granular Matter in Vacuum 256

11.3 Charged Granular Matter in Suspension 260

11.4 Agglomeration of Monopolar Charged Suspensions 262

 11.4.1 Mean Field Rate Equation 263

 11.4.2 Self-focussing Size Distribution 265

 11.4.3 Brownian Dynamics Simulations 267

11.5 Coating Particles in Bipolarly Charged Suspensions 271

 11.5.1 Coulomb Interaction vs. Translational Brownian Motion 273

 11.5.2 Coulomb Interaction vs. Rotational Brownian Motion 276

11.6 Summary 277

References 278

12 Magnetized Granular Materials **281**
(D. L. Blair and A. Kudrolli)

12.1 Introduction 281

12.2 Background: Dipolar Hard Spheres 282

12.3 Experimental Technique 283

12.4 The Phase Diagram 285

12.5 The Non-equipartition of Energy 288

12.6 Cluster Growth Rates 290

12.7 Compactness of the Cluster 292

12.8 Migration of Clusters 293

12.9 Summary 293

References 295

VI Computational Aspects	297
13 Molecular Dynamics Simulations of Granular Materials	
<i>(S. Luding)</i>	299
13.1 Introduction	299
13.2 The Soft-particle Molecular Dynamics Method	300
13.2.1 Discrete-particle Model	300
13.2.2 Equations of Motion	300
13.2.3 Contact Force Laws	301
13.3 Hard-sphere Molecular Dynamics	305
13.3.1 Smooth Hard-sphere Collision Model	305
13.3.2 Event-driven Algorithm	306
13.4 The Link between ED and MD via the TC Model	307
13.5 The Stress in Particle Simulations	309
13.5.1 Dynamic Stress	309
13.5.2 Static Stress from Virtual Displacements	310
13.5.3 Stress for Soft and Hard Spheres	310
13.6 2D Simulation Results	311
13.6.1 The Equation of State from ED	311
13.6.2 Quasi-static MD Simulations	312
13.7 Large-scale Computational Examples	316
13.7.1 Cluster Growth (ED)	316
13.7.2 3D Ring-shear Cell Simulation	318
13.8 Conclusion	321
References	322
14 Contact Dynamics for Beginners	
<i>(L. Brendel, T. Unger, and D. E. Wolf)</i>	325
14.1 Introduction	325
14.2 Discrete Dynamical Equations	326
14.3 Volume Exclusion in a One-dimensional Example	327
14.4 The Three-dimensional Single Contact Case Without Cohesion	329
14.5 Iterative Determination of Constraint Forces in a Multi-contact System	333
14.6 Computational Effort: Comparison Between CD and MD	336
14.7 Rolling and Torsion Friction	337
14.8 Attractive Contact Forces	339
14.9 Conclusion	340
References	341
Index	345

CD-ROM

The enclosed CD-ROM contains the figures of the articles, many of them colored, as well as related movies.
