

Contents at a Glance

Introduction	1
Part I: What Evolution Is.....	7
Chapter 1: What Evolution Is and Why You Need to Know.....	9
Chapter 2: The Science — Past and Present — of Evolution.....	23
Chapter 3: Getting into Your Genes: (Very) Basic Genetics	39
Part II: How Evolution Works.....	57
Chapter 4: Variation: A Key Requirement for Evolution.....	59
Chapter 5: Natural Selection and Adaptations in Action	73
Chapter 6: Random Evolution and Genetic Drift: Sometimes It's All about Chance.....	85
Chapter 7: Quantitative Genetics: When Many Genes Act at Once	99
Chapter 8: Species and Speciation.....	111
Chapter 9: Phylogenetics: Reconstructing the Tree of Life	125
Part III: What Evolution Does	145
Chapter 10: The Evolution of Life History.....	147
Chapter 11: Units of Selection and the Evolution of Social Behavior	167
Chapter 12: Evolution and Sex.....	183
Chapter 13: Co-evolution: The Evolution of Interacting Species.....	205
Chapter 14: Evo-Devo: The Evolution of Development	219
Chapter 15: Molecular Evolution.....	233
Part IV: Evolution and Your World.....	249
Chapter 16: Human Evolution.....	251
Chapter 17: The Evolution of Antibiotic Resistance	269
Chapter 18: HIV: The Origin and Evolution of a Virus	283
Chapter 19: Influenza: One Flu, Two Flu, Your Flu, Bird Flu	297
Part V: The Part of Tens	315
Chapter 20: Ten Fascinating Fossil Finds	317
Chapter 21: Ten Amazing Adaptations	327
Chapter 22: Ten Arguments against Evolution and Why They're Wrong	335
Index	345

Table of Contents

***Introduction*..... 1**

About This Book.....	1
Conventions Used in This Book	2
What You're Not to Read.....	2
Foolish Assumptions	3
How This Book Is Organized.....	3
Part I: What Evolution Is	3
Part II: How Evolution Works	4
Part III: What Evolution Does.....	4
Part IV: Evolution and Your World	5
Part V: The Part of Tens.....	5
Icons Used in This Book.....	6
Where to Go from Here.....	6

***Part 1: What Evolution Is* 7**

Chapter 1: What Evolution Is and Why You Need to Know 9

Biological Evolution at a Glance.....	10
Gene defined	10
What's the (gene) frequency, Kenneth?.....	11
The timescales of evolution	12
Gene extremes: Mutation and extinction	12
Darwin and His Big Ideas	13
Natural selection	14
Speciation	16
How "fitness" fits in with natural selection.....	17
Understanding adaptive characters	17
The Study of Evolution, Post-Darwin.....	18
Applying Evolution Today.....	19
Conservation.....	19
Agriculture.....	20
Medicine	21
One Final Point: Just How Evolved Are You?	22

Chapter 2: The Science — Past and Present — of Evolution 23

Evolution: A Fact and a Theory.....	24
Evolution and gravity: Two peas in a scientific pod	24
How to think like a scientist.....	25

The Evidence of Evolution27
 Knowledge about DNA and genetics28
 Experimental evidence28
 Measurement of the rates of change28
The Scientific Foundation of Evolution by Natural Selection.....29
 Gradualism: Changes over time.....29
 The age of the Earth.....30
 The fossil record.....32
 Biogeographic patterns, or location, location, location.....35
 Natural selection and speciation.....36

Chapter 3: Getting into Your Genes: (Very) Basic Genetics 39

What Is Genetics?39
DNA: A Molecule for Storing Genetic Information40
 Chromosomes: Where your DNA is.....41
 DNA's four-letter alphabet41
Reading the Instructions: From DNA to RNA to Proteins.....43
 Transcription: Producing RNA.....44
 Protein-coding RNA and the genetic code44
 Non-protein-coding RNA.....46
Getting Specific about Genes.....47
 Of alleles and loci47
 Dominant, recessive, or passive-aggressive?.....48
Summing It All Up: Genomes49
 Size isn't everything: Sizing up the genome.....49
 Number of genes50
 Genome organization: Nuclear, mitochondrial, or free floating? ...51
 How many copies?.....52
Passing It On: Sexual Reproduction and the Genome53
 Dominating issues53
 Genotype and phenotype54
 What this has to do with natural selection55

***Part II: How Evolution Works*57**

Chapter 4: Variation: A Key Requirement for Evolution 59

Understanding Variation59
 Key concepts in variation.....60
 Two kinds of variation: Phenotypic and genotypic61
 Variation that's important to evolution.....62
 Population structure and gene flow63
Where Variation Comes From: Mutations63
 Important mutations64
 Which comes first — the mutant chicken or
 the selective agent?64
 Different kinds of mutations65
 Preventing bad mutations67

Gene Frequency and the Hardy-Weinberg Equilibrium68
 What’s the big idea?69
 Using the Hardy-Weinberg equilibrium70

Chapter 5: Natural Selection and Adaptations in Action73

Natural versus Artificial Selection74
 Directional selection75
 Stabilizing selection75
 Adaptation: Changes Resulting from Natural Selection75
 Exaptation: Selecting for one trait, ending up with another77
 Chromosomes in action: Linkage and hitchhikers78
 But wait — not all traits are adaptations79
 You can’t get there from here: Constraints and trade-offs80
 Run, Mouse, Run80
 Darwin’s and Grants’ Finches82

**Chapter 6: Random Evolution and Genetic Drift:
 Sometimes It’s All about Chance85**

Genetic Drift Defined85
 Wrapping Your Head Around Randomness86
 At the level of the individual87
 At the level of the gametes88
 Situations in Which Drift Is Important89
 When a population is small89
 When genetically different individuals have the same fitness90
 Drift or selection? When it’s hard to tell90
 Genetic Drift in Action: When Big Populations Get Little92
 Population bottlenecks92
 Founder effects94
 The Shifting-Balance Hypothesis: It’s What’s Wright95
 The adaptive landscape: A 3-D fitness map95
 Being the best you can be — on your own peak97
 You just can’t get there from here97

**Chapter 7: Quantitative Genetics: When Many Genes
 Act at Once99**

Why Quantitative Genetics Is Important100
 Interacting genes100
 Multigenetic traits in medicine and agriculture101
 Understanding Quantitative Traits102
 Continuous and non-continuous traits102
 Crossing a threshold102
 QTL Mapping: Identifying What Genes Matter103
 Analyzing the Heritability of Quantitative Traits104
 Additive or non-additive?105
 Determining phenotypic variation105
 Broad- and narrow-sense heritability106
 Measuring the Strength of Selection107

Chapter 8: Species and Speciation	111
Species and Speciation at a Glance.....	111
The biological-species concept	112
When one species becomes two	112
Going in Circles: Ring Species	113
The Components of Speciation	115
How little changes add up: Local adaptations.....	116
Reproductive isolation: The final step of speciation	117
Types of Speciation.....	118
Allopatric speciation: There IS a mountain high enough	118
Allopatric speciation by founder effect: Getting carried away.....	119
Parapatric speciation: I just can't live in your world.....	119
Sympatric speciation: Let's just be friends	121
Islands: Good Places to Vacation and Speciate	123
A Species Concept for Bacteria	123
Chapter 9: Phylogenetics: Reconstructing the Tree of Life	125
Understanding the Importance of Phylogenetic Classification.....	125
Drawing the Tree of Life: Branching Patterns and Speciation.....	128
A simple tree	128
A more complex tree.....	128
Reading Trees	129
Knowing your nodes	129
Getting oriented: Up, down, or round and round.....	130
Understanding groups	132
Reconstructing Trees: A How To Guide	134
Finding clues (aka characters)	135
Using outgroup analysis to determine derived and ancestral states	136
Grouping species	136
Testing phylogenetic trees	138
Reconstructing Trees: An Example.....	139
Identifying characters.....	139
Assigning polarity.....	140
Grouping species	140
A word about more complicated trees	142
Seeing Phylogenetic Trees in Action	142
Example 1: The Florida dentist	143
Example 2: General exposure to HIV.....	143
Example 3: Legal cases	144

Part III: What Evolution Does

Chapter 10: The Evolution of Life History	147
Evolution and the Diversity of Life Histories.....	148

’Til Death Do Us Part: The Evolution of Life Span149
 Why die? Trade-offs and risks.....149
 Methuselah flies: The evolution of life span in the laboratory150
 The Trade-Off between Survival and Reproduction153
 It’s good to reproduce often, except when it’s not154
 Early vs. later reproduction: Why wait?156
 The trade-off between size and number of offspring.....163
 Why Age?.....165

Chapter 11: Units of Selection and the Evolution of Social Behavior167

Inclusive Fitness and Kin Selection.....167
 Your fitness + your relatives’ fitness = inclusive fitness.....168
 Not reproducing to help your family: Kin selection.....169
 Levels of Selection170
 Group selection170
 Selection at the level of the gene.....173
 The Evolution of Altruistic Social Systems175
 Cooperative breeding175
 One good turn deserves another: Reciprocal altruism177
 Going to extremes: Eusociality179
 One is the loneliest number: Multicellularity181

Chapter 12: Evolution and Sex183

Sex Terms You Probably Thought You Knew183
 Sexual Selection: The Art of Picking a Mate184
 The Peacock’s Tail: Sexual Selection and Female Choice185
 It’s not how you feel, it’s how you look:
 Runaway-selection hypothesis186
 Or maybe it IS how you feel: The good-genes hypothesis188
 The handicap hypothesis189
 Sexual Selection and Male-Male Competition.....189
 Direct male-male contests190
 Indirect competition191
 Sperm competition.....191
 Being sneaky: Alternative male strategies192
 The Battle of the Sexes: Male-Female Conflict.....192
 Infanticide.....193
 Poison semen.....194
 Sex: It’s Expensive, So Why Bother?195
 Idea 1: Sex produces parasite-resistant offspring196
 Idea 2: Sex speeds up adaptation by combining rare beneficial mutations.....197
 Idea 3: Sex is beneficial because it can eliminate bad mutations199
 Evolution of Separate Sexes and the 50-50 Sex Ratio200
 Sometimes, it’s good to be discrete201
 One girl for every boy.....202
 ‘Sex’ in Bacteria203

Chapter 13: Co-evolution: The Evolution of Interacting Species . . .	205
Co-evolution Defined	205
Co-evolution and species interactions	206
Outcomes of co-evolution	209
Interactions between Plants and Animals.....	210
Pollination wars.....	211
The evolution of pollination by animals.....	212
Seed dispersal.....	214
Trading food and shelter for defense	215
Disease Systems: Parasitic Co-evolution.....	215
Bunnies in the Outback	216
Disease-host interaction in the lab	217
Chapter 14: Evo-Devo: The Evolution of Development	219
Defining Development: From Embryo to Adult	220
Under construction: The development process in action	221
The effect of environment	221
Little changes mean a lot	223
Key Ideas about Evo-Devo	224
Developmental stages = Evolutionary stages	225
Earlier vs. later stages	226
It's all in the timing.....	226
Why any of this is important	228
Genes Responsible for Development: Hox Genes	229
Keeping it in the family.....	230
Of mice and men and . . . jellyfish!.....	231
Chapter 15: Molecular Evolution	233
My Genome's Bigger than Your Genome!.....	234
Genome sizes at a glance	234
The C value and the C-value paradox.....	236
Distinguishing between genes and non-coding DNA	236
The Whys and Wherefores of Non-coding DNA	238
It performs a function	238
It serves no function but isn't harmful	239
It's parasitic!.....	239
Coding DNA: Changing the Number of Genes an Organism Has.....	240
Getting genes from other lines: Lateral gene transfer	240
Shuffling exons: Alternative gene splicing	241
Duplicating genes: A gene is born	242
The Neutral Theory of Molecular Evolution.....	243
Telling Time with Genes: The Molecular Clock.....	244
When you can't.....	244
When you can	244

Part IV: Evolution and Your World249**Chapter 16: Human Evolution251**

The Origin of Homo Sapiens: Where We Came From.....	251
Phylogenetic evidence: Hangin' round on the Tree of Life	252
Carved in stone: The fossils.....	254
Reconstructing the history of hominid evolution.....	257
Out of Africa: Hominid migration patterns	261
Evolution within Homo Sapiens	265
Natural selection: Still acting on humans.....	265
Relaxation of selection	267
Cultural evolution.....	267

Chapter 17: The Evolution of Antibiotic Resistance269

Antibiotics and Antibiotic Resistance in a Nutshell	270
Splitting microbial hairs: Defining antibiotics	270
A brief history of antibiotic resistance.....	271
Becoming Resistant to Antibiotics: A How-to Guide	272
Evolution via mutation	273
Evolution via gene transfer	274
Resistance at the cellular and biochemical levels	275
Evolving a bit at a time: Partial resistance.....	276
The Battle against Antibiotic Resistance	277
New and improved! Making new drugs.....	277
Turning back the clock to bacterial sensitivity	278
Changing the way antibiotics are used.....	281

Chapter 18: HIV: The Origin and Evolution of a Virus283

What Viruses Are.....	284
Are viruses alive? We say "Yes!"	284
Viral reproduction: DNA, RNA, or retro?	286
What Is HIV?.....	286
Sneaking around in your chromosome.....	287
Attacking T cells	287
Mutating like crazy.....	288
The History of the HIV Epidemic	288
Where it came from.....	289
A timeline.....	290
The Path and Evolution of HIV in the Patient.....	291
Increasing and growing more divergent	292
Reaching a plateau	293
Destroying T-cells in a different way.....	293

Other Interesting Facts about HIV	294
Some people may be resistant.....	294
HIV evolves in a new host	294
HIV has a high recombination rate	295
Using Evolution to Fight HIV.....	295

Chapter 19: Influenza: One Flu, Two Flu, Your Flu, Bird Flu 297

The Flu and Your Immune System	298
Act 1: The virus attacks and spreads.....	298
Act 2: The body fights back	298
Act 3: Building up the guard.....	299
Which leads to a sequel: The return of the flu	299
The Three Types of Influenza: A, B, C.....	299
The Evolution of Influenza A.....	300
Mechanisms of evolution: Mutation, recombination, or reassortment	300
Genes to know	301
Who gets the flu and from where	302
Learning from the Past: Flu Pandemics.....	305
Pandemics of 1889 and 1900	306
The Spanish flu (1918).....	306
The Asian flu (1957)	306
The Hong Kong flu (1968).....	307
The Russian flu (1977).....	307
Fighting Back: The Art and Science of Making Flu Vaccines.....	308
Dead vaccines	308
Live vaccines.....	309
Predicting the future to make next year's vaccine.....	311
Making a more universal influenza A vaccine.....	313

***Part V: The Part of Tens***315

Chapter 20: Ten Fascinating Fossil Finds 317

Dinosaurs	317
Archaeopteryx.....	319
Wrangle Island Mammoths	320
Pterosaurs (Pterodactyls).....	320
Trilobites	321
Tiktaalik Rosea	322
Hallucigenia and the Burgess Shale.....	323
Stromatolites	324
Microfossils.....	325
Amber	326

Chapter 21: Ten Amazing Adaptations 327

- Different Kinds of Teeth327
- Sight: The Evolution of the Eye328
- Cave Blindness329
- Back to the Sea330
- And Back to the Land Again.....331
- Photosynthesis332
- Deep-Sea Thermal-Vent Organisms.....332
- Endosymbiosis333
- Vertebrate Flight.....333
- Trap-jaw Ants.....334

**Chapter 22: Ten Arguments against Evolution
and Why They’re Wrong 335**

- It’s Only a Theory.....335
- It Violates the Second Law of Thermodynamics.....336
- It’s Been Proved Wrong (by Scientists!)336
- It’s Completely Random337
- It Can’t Result in Big Changes.....338
- No Missing Link Means No Proof338
- It Can’t Account for Everything: Enter the Intelligent Designer.....339
- It Can’t Create Complex Structures340
- It Should Be Taught with ID in Science Class341
- It’s a Fringe Topic342
- It’s at Odds with Biblical Creation343

***Index*.....345**
