<b>Introduction</b>	<b>1</b>	<b>Part III: Good Housekeeping with Linux</b>	<b>101</b>
<b>Part I: Making the Desktop Work for You</b>	<b>5</b>	<b>Technique 16:</b> Red-lining RPM Queries	103
<b>Technique 1:</b> Finding the Power in KDE Protocols	7	<b>Technique 17:</b> Installing Made Easy with RPM	108
<b>Technique 2:</b> Getting GNOME Virtual File Systems to Do the Work for You	13	<b>Technique 18:</b> Getting Comfortable with RPM	115
<b>Technique 3:</b> Streamlining Your Work with File Associations	18	<b>Technique 19:</b> Keeping Up-to-Date with apt and Synaptic	119
<b>Technique 4:</b> Prompting Yourself with a Custom Prompt	23	<b>Technique 20:</b> Setting Up Automatic Services	126
<b>Technique 5:</b> Getting There Quick with Dynamic Shortcuts	30	<b>Technique 21:</b> Making Your Inner System Administrator Happy (And Productive)	130
<b>Technique 6:</b> Using cd Shortcuts for Rapid Transit	34	<b>Technique 22:</b> Spring Cleaning Essentials	137
<b>Technique 7:</b> Typing Less and Doing More with Handy Automagic Variables	38	<b>Part IV: Tweaking the Kernel on Your Linux System</b>	<b>149</b>
<b>Technique 8:</b> Logging In, Logging Out	45	<b>Technique 23:</b> Taking Good Care of Your Kernel	151
<b>Technique 9:</b> Making History (Work for You)	50	<b>Technique 24:</b> Creating a Custom Kernel	157
<b>Technique 10:</b> Keeping Your Life Simple with Aliases and Functions	55	<b>Technique 25:</b> Coping with the SELinux Security System	164
<b>Part II: Getting the Most from Your File System</b>	<b>63</b>	<b>Technique 26:</b> Finding Out about Your System with /proc	170
<b>Technique 11:</b> Sharing Files and Printers in a Windows World	65	<b>Part V: Securing Your Workspace</b>	<b>177</b>
<b>Technique 12:</b> Finding What You Need	73	<b>Technique 27:</b> Closing Those Prying Eyes	179
<b>Technique 13:</b> Moving Made Easy with Archives	82	<b>Technique 28:</b> Using Encryption for Extra Security	184
<b>Technique 14:</b> Downloading and Uploading Files in a Snap	88	<b>Technique 29:</b> Securing a Large Network with Custom Authentication	194
<b>Technique 15:</b> Building a Playpen with User Mode Linux	94	<b>Technique 30:</b> Customizing Authentication with PAM	203
		<b>Technique 31:</b> Gaining Privileges	209
		<b>Technique 32:</b> sudo Pseudonyms	213
		<b>Technique 33:</b> Securing Your Connections with SSH	218

<b>Part VI: Networking Like a Professional</b>	<b>227</b>	<b>Part IX: Backing Up Means Never Having to Say You're Sorry</b>	<b>369</b>
<b>Technique 34:</b> Protecting Yourself with a Firewall	229	<b>Technique 49:</b> Getting Ready to Back Up Your Data	371
<b>Technique 35:</b> Using VNC to Connect to Remote Desktops	239	<b>Technique 50:</b> Backing Up Your Data	377
<b>Technique 36:</b> Streamlining Your Network Surveillance	247	<b>Technique 51:</b> Quick Backup to Remote Storage	386
<b>Technique 37:</b> Evaluating Your Network Security with Nessus	255	<b>Technique 52:</b> Archiving Changes with CVS	391
<b>Technique 38:</b> Person-to-Person Networking with IRC	265	<b>Part X: Programming Tricks</b>	<b>401</b>
<b>Part VII: Monitoring Your System</b>	<b>271</b>	<b>Technique 53:</b> Using Open-Source APIs to Save Time	403
<b>Technique 39:</b> Controlling Troublesome Processes at the Command Line	273	<b>Technique 54:</b> Timesaving PHP Tricks	414
<b>Technique 40:</b> Taking Care of New (And Old) Users	282	<b>Technique 55:</b> Using the DDD Graphical Debugger with Perl	422
<b>Technique 41:</b> Keeping an Eye on Your System	291	<b>Part XI: The Scary (Or Fun!) Stuff</b>	<b>429</b>
<b>Part VIII: Serving Up the Internet and More</b>	<b>305</b>	<b>Technique 56:</b> Burning CD-Rs without Getting Burned	431
<b>Technique 42:</b> Keeping an Apache Server in Top Form	307	<b>Technique 57:</b> Search and Destroy setuid and setgid Programs	437
<b>Technique 43:</b> Keeping an Eye on Your Servers	317	<b>Technique 58:</b> Quarantining Suspicious Programs with UML	443
<b>Technique 44:</b> Making a MySQL Server Your SQL Server	328	<b>Technique 59:</b> Troubleshooting Persnickety Programs	448
<b>Technique 45:</b> Safeguarding Your Apache Server with SSL Certificates	340	<b>Technique 60:</b> Securing the Fort with Bastille	455
<b>Technique 46:</b> Retrieving HTTPMail Using hotway and Evolution	349	<b>Technique 61:</b> Creating a Second Line of Defense with LIDS	467
<b>Technique 47:</b> Stopping Spam with SpamAssassin	356	<b>Technique 62:</b> Getting Graphical with Shell Scripts	474
<b>Technique 48:</b> Using Webmin to Simplify Sendmail Configuration	364	<b>Index</b>	<b>479</b>

# Table of Contents

## Introduction

Saving Time with This Book	1
Foolish Assumptions	2
What's in This Book	2
<i>Part I: Making the Desktop Work for You</i>	2
<i>Part II: Getting the Most from Your File System</i>	3
<i>Part III: Good Housekeeping with Linux</i>	3
<i>Part IV: Tweaking the Kernel on Your Linux System</i>	3
<i>Part V: Securing Your Workspace</i>	3
<i>Part VI: Networking Like a Professional</i>	3
<i>Part VII: Monitoring Your System</i>	3
<i>Part VIII: Serving Up the Internet and More</i>	3
<i>Part IX: Backing Up Means Never Having to Say You're Sorry</i>	3
<i>Part X: Programming Tricks</i>	4
<i>Part XI: The Scary (Or Fun!) Stuff</i>	4
Icons Used in This Book	4

## Part I: Making the Desktop Work for You

<b>Technique 1: Finding the Power in KDE Protocols</b>	<b>7</b>
Discovering Your Protocols	7
Working with CD Audio Tracks Using audiocd:	8
Managing Snapshots with the camera: Protocol	9
Remote File Management with fish:	10
Getting Help with help:, info:, and man:	10
Viewing Your Local Network with the smb: Protocol	11
Other KDE Protocols	11
<b>Technique 2: Getting GNOME Virtual File Systems to Do the Work for You</b>	<b>13</b>
Using GNOME VFS Modules	13
Stacking VFS Modules	15
Working with Packages: rpm and rpms	15
Putting VFS to Work at the Command Line	17
Burning CDs with a VFS	17
Skinning Your Desktop with VFS	17

## Technique 3: Streamlining Your Work with File Associations

Classifying Data with MIME	18
Creating KDE File Associations	19
Creating New MIME Types with GNOME	20

## Technique 4: Prompting Yourself with a Custom Prompt

Making Basic Prompt Transformations	23
Adding Dynamically Updated Data to Your Prompt	24
Colorizing Your Prompt	26
Seeing a Red Alert When You Have Superuser Privileges	27
Saving Your Work	28

## Technique 5: Getting There Quick with Dynamic Shortcuts

Completing Names Automatically	30
Using the Escape Key to Your Advantage	31
Customizing Completion for Maximum Speed	32

## Technique 6: Using cd Shortcuts for Rapid Transit

Using cd and ls to Navigate through bash	34
Setting Your CDPATH Variables to Find Directories Fast	35
Remembering Where You've Been with pushd and popd	36
Manipulating Your Stack with dirs	36

## Technique 7: Typing Less and Doing More with Handy Automagic Variables

Show Me the \$\$: Giving Temporary Files Unique Names	39
Streamlining Archive Searches	39
Turning the Output of a Command into a Variable with \$( )	40
Using \$UID and \$EUID in Shell Scripts	41
Getting Quick Access to Programs with \$PATH	42
Customizing Variables for Rapid Transit	43

## **viii** *Linux Timesaving Techniques For Dummies*

<b>Technique 8: Logging In, Logging Out</b>	<b>45</b>	Sharing Linux Resources with Other Computers (SMB Clients)	67
Finding the Right Shell Script	45	<i>Adjusting the workgroup name and creating user accounts</i>	67
<i>Choosing your victims</i>	46	<i>Giving a Windows machine access to your home directory</i>	68
<i>Timing is everything</i>	46	<i>Sharing Linux files and directories with other computers</i>	69
<i>Cleaning up made easy</i>	47	Hooking Everyone Up to the Printer	69
<i>Changing prototype scripts</i>	48	<i>Sharing Linux printers with SWAT</i>	69
Customizing Your Autostart File	48	<i>Using a Windows printer from Linux</i>	70
<b>Technique 9: Making History (Work for You)</b>	<b>50</b>	Plugging In to Remote Data with Linux Programs Quickly	71
Navigating the History List	50	<b>Technique 12: Finding What You Need</b>	<b>73</b>
<i>Scrolling</i>	50	Finding Files with locate	73
<i>Summoning a command by number</i>	51	Finding Files with find	74
<i>Searching through history</i>	51	Qualifying Your Search with the find Command	75
Customizing the History List	52	<i>Doing updated filename searches</i>	75
<i>Adjusting key default settings</i>	52	<i>Adding time-based qualifications</i>	75
<i>Filtering the history list</i>	52	<i>Filtering by file size</i>	76
Executing Commands Quickly with History Variables	53	<i>Joining qualifications with AND and OR operators</i>	77
<b>Technique 10: Keeping Your Life Simple with Aliases and Functions</b>	<b>55</b>	<i>Perusing commonly used qualifications</i>	77
Viewing Your Aliases	55	Acting on What You Find	78
Creating Simple Timesaving Aliases	56	<i>Cracking open a file's info with -ls</i>	78
Using Aliases for Complex Commands	57	<i>Displaying specific info with -printf</i>	79
Automating Tedious Tasks with Functions	58	<i>Checking disk usage by user</i>	79
<i>Filtering file searches by file type</i>	58	<i>Executing commands with find</i>	80
<i>Automatic downloading</i>	58	Building Complex Commands with xargs	81
Monitoring Your System in a Snap	59	<b>Technique 13: Moving Made Easy with Archives</b>	<b>82</b>
Un-tarring the Easy Way	60	Creating Archives with File Roller	82
<b>Part 11: Getting the Most from Your File System</b>	<b>63</b>	Inspecting and Extracting Archives with File Roller	84
<b>Technique 11: Sharing Files and Printers in a Windows World</b>	<b>65</b>	Adding Functionality to tar with Complex Commands	85
What Is Samba?	65	<i>Building archives from the command line</i>	85
Getting Up and Running with Samba	66	<i>Archiving complex search results</i>	86
<i>Checking whether Samba is installed</i>	66	<i>Backing up an installed package</i>	86
<i>Enabling Samba</i>	66	Uprooting Entire Directory Trees with scp	86
		Splitting Big Files into Manageable Chunks	87

<b>Technique 14: Downloading and Uploading Files in a Snap</b>	<b>88</b>	Getting Graphic with RPM	110
Building Software from Downloaded tarballs	88	<i>Quick installations from distribution media with Fedora's Package Manager</i>	110
<i>Compiling a tarball: The basic steps</i>	89	<i>Using SuSE's package manager to your advantage</i>	112
<i>Downloading and compiling SuperKaramba</i>	89	<i>Using Rpmrake to install from media</i>	113
Versatile Downloading with wget	91	<i>Installing from your Konqueror browser</i>	114
<i>Mirroring sites with wget</i>	91	<b>Technique 18: Getting Comfortable with RPM</b>	<b>115</b>
<i>Verifying your bookmarks with wget</i>	92	Saving Time with --upgrade	115
<i>Downloading files with wget</i>	92	Verifying Your System	116
<i>Downloading and unpacking in one quick step</i>	92	Reading the Tamper-Proof Seal	117
<i>wget's optional flags</i>	92	<b>Technique 19: Keeping Up-to-Date with apt and Synaptic</b>	<b>119</b>
Downloading and Uploading with curl	93	Setting Up Synaptic and apt in a Snap	119
<b>Technique 15: Building a Playpen with User Mode Linux</b>	<b>94</b>	Keeping Up-to-Date with apt and Synaptic: The Basics	120
Choosing the ADIOS Version of User Mode Linux	94	Upgrading Your Entire Computer	122
Setting Up ADIOS	95	Handy Hints about Synaptic	123
<i>Downloading ADIOS</i>	95	<i>Changing repositories</i>	123
<i>Burning ADIOS to CD</i>	96	<i>Viewing package details</i>	123
<i>Installing ADIOS</i>	96	<i>Installing new packages with Synaptic</i>	124
Finding Your Way around UML	97	Importing the Keys to the Repository	124
Connecting to the Internet from an ADIOS VM	98	<b>Technique 20: Setting Up Automatic Services</b>	<b>126</b>
Using a GUI with UML	98	Letting Task Scheduler Work for You	126
Installing Software into UML	98	<i>Scheduling a new task</i>	127
Merging Changes to Your Prototype	99	<i>Editing a task</i>	128
		<i>Adding environment variables</i>	128
<b>Part III: Good Housekeeping with Linux</b>	<b>101</b>	<b>Technique 21: Making Your Inner System Administrator Happy (And Productive)</b>	<b>130</b>
<b>Technique 16: Red-lining RPM Queries</b>	<b>103</b>	Reining In Resources with Disk Quotas	130
Querying RPM Packages for Content	104	<i>Installing the quota RPM package</i>	131
Digesting Information	105	<i>Enabling file system quotas</i>	131
Creating a Package Index	105	<i>Getting your files together</i>	132
Querying for Prerequisites	106	<i>Setting quotas</i>	132
Don't Put That in Your Drive; You Don't Know Where That's Been!	106	<i>Reviewing your quotas</i>	134
<b>Technique 17: Installing Made Easy with RPM</b>	<b>108</b>	Using System Accounting to Keep Track of Users	134
Dissecting an RPM Package	108	<i>Setting up system accounting</i>	134
Using RPM at the Command Line	109	<i>Looking up user login hours</i>	135
Removing RPMs	110	<i>Checking out command and program usage</i>	135
Flagging Down RPM	110		

## **X** *Linux Timesaving Techniques For Dummies*

<b>Technique 22: Spring Cleaning Essentials</b>	<b>137</b>	<b>Technique 26: Finding Out about Your System with /proc</b>	<b>170</b>
Running Down the Runlevels	137	Exploring the Process-Related Entries in /proc	170
<i>Runlevel basics</i>	138	Surveying Your System from /proc	172
<i>Customizing runlevels in Fedora</i>	138	Closing Down Security Gaps with /proc	174
<i>Customizing runlevels in SuSE</i>	139	Popping the Cork: Speeding Up WINE with /proc	175
<i>Customizing runlevels in Mandrake</i>	140		
<i>Customizing runlevels at the command line</i>	141		
<i>Switching to a new runlevel</i>	141		
Disabling Unused Services	141		
Removing Unneeded Services	143		
Removing Old Users and Their Files	144		
<b>Part IV: Tweaking the Kernel on Your Linux System</b>	<b>149</b>	<b>Part V: Securing Your Workspace</b>	<b>177</b>
<b>Technique 23: Taking Good Care of Your Kernel</b>	<b>151</b>	<b>Technique 27: Closing Those Prying Eyes</b>	<b>179</b>
Adding and Removing Kernel Modules	152	Reading and Understanding File Permissions	179
<i>Learning about modules</i>	152	Controlling Permissions at the Command Line	181
<i>Installing a module with insmod</i>	152	Changing File Permissions from a Desktop	182
<i>Taking care of dependencies automatically with modprobe and depmod</i>	152		
<i>Loading a module for a slightly different kernel with insmod and modprobe</i>	153	<b>Technique 28: Using Encryption for Extra Security</b>	<b>184</b>
<i>Removing modules with rmmod</i>	154	Encryption Made Easy with <i>kgpg</i> and the KDE Desktop	185
Manipulating Boot Time Parameters	154	<i>Creating keys with kgpg</i>	185
		<i>Sharing your key with the world</i>	186
		<i>Importing a public key from a public-key server</i>	187
		<i>Encrypting and decrypting documents with drag-and-drop ease</i>	188
		Encrypting Documents with <i>gpg</i> at the Command Line	189
		<i>Sharing a secret file</i>	189
		<i>Creating a key pair and receiving encrypted documents</i>	189
		<i>Encrypting documents on your home system</i>	190
		Encrypting E-Mail for Added Security	191
		<i>Encrypting with Ximian Evolution</i>	191
		<i>Setting up Mozilla e-mail for encryption</i>	192
		<i>Sending and receiving encrypted messages with Mozilla mail</i>	193
<b>Technique 24: Creating a Custom Kernel</b>	<b>157</b>	<b>Technique 29: Securing a Large Network with Custom Authentication</b>	<b>194</b>
Reconfiguring Your Kernel — Ready, Set, Go!	158	Using Cross-Platform Authentication with Linux and Windows	195
Step 1: Making an Emergency Plan, or Boot Disk	158	<i>Prepping for cross-platform authentication</i>	195
Step 2: Finding the Source Code	160	<i>Setting up cross-platform authentication</i>	196
Step 3: Configuring a New Kernel	160		
Step 4: Customizing the Kernel	161		
Step 5: Building the Kernel	162		
<b>Technique 25: Coping with the SELinux Security System</b>	<b>164</b>		
Understanding the Principles of SELinux	164		
<i>Everything is an object</i>	165		
<i>Identifying subjects in SELinux</i>	165		
<i>Understanding the security context</i>	165		
Disabling or Disarming SELinux	166		
Playing the Right Role	167		
Finding Out about Your SELinux Policy	168		

Using PAM and Kerberos to Serve Up Authentication	197	<b>Technique 33: Securing Your Connections with SSH</b>	<b>218</b>
<i>Establishing synchronized system times</i>	197	Using SSH for Top-Speed Connections	219
<i>Testing your domain name server (DNS)</i>	199	Setting Up Public-Key Authentication to Secure SSH	219
<i>Setting up a Key Distribution Center</i>	199	<i>Generating the key pair</i>	219
<i>Setting up automatic ticket management with Kerberos and PAM</i>	201	<i>Distributing your public key</i>	220
<i>Adding users to the Key Distribution Center</i>	202	<i>Passing on your passphrase</i>	220
<b>Technique 30: Customizing Authentication with PAM</b>	<b>203</b>	Logging In with SSH and Key Authentication	221
Understanding Modules and Configuration Files:		<i>Starting from the command line</i>	221
The Basics of PAM Authentication	204	<i>Getting graphic</i>	222
Finding a Module and Customizing Its Rules	204	Creating Shortcuts to Your Favorite SSH Locations	222
Building Good Rules with PAM	204	Copying Files with scp	223
<i>Phase</i>	205	Secure (And Fast) Port Forwarding with SSH	223
<i>Control level</i>	205		
<i>Module pathname</i>	205	<b>Part VI: Networking Like a Professional</b>	<b>227</b>
<i>Arguments</i>	205	<b>Technique 34: Protecting Yourself with a Firewall</b>	<b>229</b>
Dissecting a Configuration File	206	Finding Your Firewall	229
Skipping a Password with PAM	208	<i>Setting up a simple firewall in Mandrake Linux</i>	230
<b>Technique 31: Gaining Privileges</b>	<b>209</b>	<i>Setting up a simple firewall in Fedora Linux</i>	231
Feeling the Power	209	<i>Setting up a simple firewall in SuSE Linux</i>	232
Gaining Superuser Privileges	210	Editing the Rules with Webmin	233
Pretending to Be Other Users	210	<i>Starting a Webmin session</i>	234
Limiting Privileges with sudo	211	<i>Reading the rules with Webmin</i>	234
<b>Technique 32: sudo Pseudonyms</b>	<b>213</b>	<i>Changing the rules</i>	236
Installing sudo	214	<i>Editing existing rules</i>	236
Adding Up the Aliases	214	<i>Adding a new rule with Webmin</i>	237
Adding Aliases to the sudo Configuration File	214	<b>Technique 35: Using VNC to Connect to Remote Desktops</b>	<b>239</b>
Defining the Alias	215	Sharing Desktops with VNC	239
<i>Creating a User_Alias</i>	215	Inviting Your Friends to Use Your Desktop	240
<i>Creating a Runas_Alias</i>	215	Serving Up a New Desktop with VNC Server	241
<i>Simplifying group management with a Host_Alias</i>	216	Using tsclient to View Remote Desktops from Linux	242
<i>Mounting and unmounting CDs without the superuser password</i>	216	<i>Using tsclient with a VNC server</i>	243
<i>Managing access to dangerous commands with command aliases</i>	216	<i>Using tsclient with an RDP server</i>	243

## **xii** *Linux Timesaving Techniques For Dummies*

Making Cut and Paste Commands Work on a Remote Desktop	244	Finding Fellow Mandrake Users in the Mandrake Chat Room	268
Creating New VNC Desktops on Demand	245	Customizing KSirc — Who Do You Want to Be Today?	268
<i>Switching display managers in SuSE Linux</i>	245		
<i>Switching display managers in Mandrake Linux</i>	245		
<i>Connecting gdm and VNC</i>	246		
<b>Technique 36: Streamlining Your Network Surveillance</b>	<b>247</b>	<b>Part VII: Monitoring Your System</b>	<b>271</b>
Exploring Your Network with lsof	247	<b>Technique 39: Controlling Troublesome Processes at the Command Line</b>	<b>273</b>
<i>Running lsof</i>	248	Processing Processes with procps	273
<i>Interpreting the lsof output</i>	248	Keeping Track of Process Status with ps, pstree, and pgrep	274
<i>Reading file types</i>	249	<i>Using ps to filter process status information</i>	274
Discovering Network Connections	249	<i>Viewing ps output the way you want to see it</i>	275
Other Timesaving lsof Tricks	250	<i>Making parent-child relationships stand out in a ps listing</i>	277
Packet Sniffing with the Ethereal Network Analyzer	251	<i>Climbing the family tree with pstree</i>	277
<i>Starting Ethereal</i>	251	<i>Finding processes with pgrep</i>	278
<i>Capturing packets</i>	251	Killing Processes with pkill	280
<i>Applying filters to screen packets</i>	252	Killing Processes with killall	280
<i>Peeking in packets</i>	253	Closing Windows with xkill	280
<i>Color-coding packets coming from your network</i>	253	Getting Your Processes' Priorities Straight	281
<b>Technique 37: Evaluating Your Network Security with Nessus</b>	<b>255</b>	<b>Technique 40: Taking Care of New (And Old) Users</b>	<b>282</b>
Getting Up and Running with Nessus	256	Managing Users and Groups with the Fedora/Mandrake User Manager	283
<i>Installing programs Nessus needs to run</i>	256	<i>Adding new users</i>	283
<i>Installing Nessus</i>	256	<i>Modifying user accounts</i>	284
<i>Adding a user to Nessus</i>	257	<i>Adding groups</i>	285
<i>Generating a certificate</i>	258	<i>Filtering users and groups</i>	286
Using Nessus to Scan Your Network	258	Managing Users and Groups with the SuSE User Administrator	286
<i>Starting the daemon and the interface</i>	259	<i>Adding new users</i>	287
<i>Reading the grim results</i>	262	<i>Modifying user accounts</i>	289
Keeping Your Plug-ins Up-to-Date	263	<i>Adding groups</i>	289
		<i>Filtering users and groups</i>	290
<b>Technique 38: Person-to-Person Networking with IRC</b>	<b>265</b>	<b>Technique 41: Keeping an Eye on Your System</b>	<b>291</b>
Finding the Answers You Seek in a Linux Chat Room	265	Keeping an Eye on the System Logs	292
Chatting in the Fedora Chat Room	267	<i>Viewing and filtering log files with Fedora and Mandrake</i>	292
Looking for Answers in the SuSE Chat Room	268	<i>Adding and deleting log files from the viewer</i>	293

<i>Setting up alerts and warnings</i>	294	Monitoring MySQL Server with the MySQL Control Center	320
<i>Viewing your log files from SuSE</i>	295	<i>Downloading and installing the MySQL Control Center</i>	320
<i>Monitoring your log files from SuSE</i>	295	<i>Accessing MySQL Control Center features</i>	321
Customizing Your Log Files	296	<i>Viewing, managing, and repairing a database with the Databases controls</i>	321
Keeping an Eye on Resources with KDE System Guard	298	<i>Putting the Server Administration controls to work</i>	323
<i>Finding and killing runaway processes</i>	298	<i>Adding a new user</i>	324
<i>Prioritizing processes to smooth a network bottleneck</i>	300	Watching Your MySQL Traffic with mtop	325
<i>Watching your system load</i>	300	<i>Gathering all the packages that mtop needs</i>	325
<i>Creating a new worksheet</i>	301	<i>Installing mtop</i>	326
<i>Creating system resource logs</i>	302	<i>Monitoring traffic</i>	326
<i>Displaying network resources</i>	303	<b>Technique 44: Making a MySQL Server Your SQL Server</b>	<b>328</b>
<b>Part VIII: Serving Up the Internet and More</b>	<b>305</b>	Building a MySQL Server	329
<b>Technique 42: Keeping an Apache Server in Top Form</b>	<b>307</b>	<i>Installing the necessary packages</i>	329
Setting Up Apache — Quick!	307	<i>Starting the MySQL server</i>	329
<i>Using Synaptic to download and install Apache</i>	308	Replicating MySQL Data	330
<i>Installing Apache from disc</i>	309	<i>Configuring replication: The three topologies</i>	330
Starting the Apache Service	310	<i>Setting up replication for a single slave and master</i>	331
Building a Quick Web Page with OpenOffice.org	312	Choosing a Method to Back Up MySQL Data	332
Taking Your Site Public with Dynamic DNS	313	Backing Up and Restoring with mysqldump	332
<i>Understanding how dynamic DNS works</i>	313	<i>mysqldump backup options</i>	332
<i>Setting up dynamic DNS</i>	313	<i>Backing up multiple databases</i>	333
<i>Updating your IP address</i>	314	<i>Compressing the archive</i>	333
Keeping Your Apache Server Up-to-Date the Easy Way	314	<i>Restoring a mysqldump archive</i>	334
<i>Installing the Fedora HTTP Configuration tool</i>	315	Backing Up with File System Tools	334
<i>Putting the HTTP Configuration tool to work</i>	315	Making a mysqlhotcopy of Your Database	334
<b>Technique 43: Keeping an Eye on Your Servers</b>	<b>317</b>	Archiving a Replication Slave	335
Watching Your Web Server Traffic with apachetop	318	Taking Care of Business with MySQL Administrator	335
<i>Installing apachetop</i>	318	<i>Installing MySQL Administrator</i>	335
<i>Running and exiting apachetop</i>	318	<i>Starting MySQL Administrator</i>	336
<i>Navigating apachetop</i>	319	<i>Exploring MySQL Administrator's tools</i>	336
<i>Switching among the log files (or watching several at once)</i>	319	<b>Technique 45: Safeguarding Your Apache Server with SSL Certificates</b>	<b>340</b>
<i>Changing the display time of apachetop statistics</i>	320	Understanding the Basics of How Certificates Work	340
		Choosing an SSL Certificate	341

## **xiv** *Linux Timesaving Techniques For Dummies*

Creating a Certificate Signing Request	341	<b>Part IX: Backing Up Means Never Having to Say You're Sorry</b>	<b>369</b>
Creating a Self-Signed Certificate	344		
Creating a Signing Authority with openssl	345		
<i>Creating a certificate authority</i>	345		
<i>Signing a CSR</i>	346		
Trusting in Trusted Certification Authorities	347		
Exploring Your Certificate Collection with Mozilla	347		
<b>Technique 46: Retrieving HTTPMail Using hotway and Evolution</b>	<b>349</b>		
Introducing hotway	349		
Getting Started with hotway	350		
Setting Up Evolution to Read HTTPMail Accounts with hotway	350		
Ringing the Bells and Blowing the Whistles: Your Evolution Summary Page	353		
<b>Technique 47: Stopping Spam with SpamAssassin</b>	<b>356</b>	<b>Technique 49: Getting Ready to Back Up Your Data</b>	<b>371</b>
Installing SpamAssassin	356	Deciding What to Archive	372
<i>Installing from the distribution media</i>	357	Choosing Archive Media	372
<i>Installing from RPM downloads</i>	358	<i>Tape drives</i>	372
<i>Starting the service</i>	358	<i>Removable and external disk drives</i>	373
Fine-Tuning SpamAssassin to Separate the Ham from the Spam	358	<i>Removable media</i>	373
<i>Customizing settings</i>	359	<i>Optical media (CDs and DVDs)</i>	374
<i>Saving your settings</i>	360	<i>Online storage</i>	374
Adding a New Filter to Evolution	361	Choosing an Archive Scheme	374
Serving Up a Big Bowl of the RulesDuJour	363	<i>Full backups</i>	374
<b>Technique 48: Using Webmin to Simplify Sendmail Configuration</b>	<b>364</b>	<i>Differential backups</i>	374
Registering Your Address	364	<i>Incremental backups</i>	375
Taming a Sendmail Server	364	<i>Incremental versus differential backups</i>	375
Tweaking Your Configuration Files with Webmin	365	Choosing an Archive Program	376
<i>Serving up mail for multiple domains</i>	366	<b>Technique 50: Backing Up Your Data</b>	<b>377</b>
<i>Relaying e-mail</i>	366	Estimating Your Media Needs	377
<i>Using aliases to simplify mail handling</i>	367	Creating Data Archives with tar	378
		<i>Backing up files and directories</i>	378
		<i>Backing up account information and passwords</i>	378
		<i>Targeting bite-sized backups for speedier restores</i>	379
		<i>Rolling whole file systems into a tarball</i>	379
		Starting a Differential Backup Cycle	380
		Starting an Incremental Backup Cycle	381
		Restoring from Backup with tar	382
		Backing Up to CD (Or DVD) with cdbackup	383
		<i>Creating the backup</i>	383
		<i>Restoring from a CD or DVD backup</i>	384
		<i>Restoring from a disc containing multiple archives</i>	384
		<b>Technique 51: Quick Backup to Remote Storage</b>	<b>386</b>
		Combining the Power of tar with ssh for Quick Remote Backups	387
		<i>Testing the ssh connection to the remote host</i>	387
		<i>Creating a tar archive over the ssh connection</i>	387
		<i>Backing up to tape drives on remote machines</i>	388

Backing Up to a Remote Computer with rdist and ssh	388		
<i>Testing the ssh connection to the remote host</i>	388		
<i>Creating the distfile</i>	389		
<i>Backing up</i>	390		
<b>Technique 52: Archiving Changes with CVS</b>	<b>391</b>		
Getting Started with CVS	392		
<i>Checking whether CVS is installed</i>	392		
<i>Discovering what to use CVS for</i>	392		
Creating a CVS Repository	392		
Populating Your Repository with Files	393		
Checking Files In and Out (Or Playing in Your Sandbox)	394		
Simplifying CVS with cervisia	395		
<i>Installing cervisia</i>	395		
<i>Putting files in your sandbox</i>	395		
<i>Adding more files to your repository</i>	396		
<i>Committing your changes</i>	396		
<i>Diplomacy 101 — resolving conflicts</i>	397		
<i>Browsing your log files</i>	397		
<i>Marking milestones with tags</i>	398		
<i>Branching off with cervisia</i>	399		
<b>Part X: Programming Tricks</b>	<b>401</b>		
<b>Technique 53: Using Open-Source APIs to Save Time</b>	<b>403</b>		
Using the libcurl Library (C Programming)	404		
Uploading a File with a Simple Program			
Using libcurl	404		
<i>Line 7: Defining functions and data types</i>	405		
<i>Line 14: Calling the initialization function</i>	405		
<i>Lines 18– 21: Defining the transfer</i>	405		
<i>Line 23: Starting the transfer</i>	407		
<i>Line 26: Finishing the upload</i>	407		
Installing the Ming Library	407		
Building a Simple Flash Movie with Ming	408		
<i>Examining the program</i>	408		
<i>Compiling the program</i>	410		
<i>Running the program</i>	410		
Building Interactive Movies with Ming	411		
<i>Examining the program</i>	411		
<i>Compiling the program</i>	413		
<i>Running the program</i>	413		
<b>Technique 54: Timesaving PHP Tricks</b>	<b>414</b>		
Doing the curl E-shuffle with PHP	415		
<i>Combining PHP with curl and XML: An overview</i>	415		
<i>Checking out the XML file</i>	415		
<i>Downloading and displaying the XML file with a PHP script (and curl)</i>	416		
Sending E-Mail from PHP When Problems Occur	420		
<b>Technique 55: Using the DDD Graphical Debugger with Perl</b>	<b>422</b>		
Debugging Perl Code with DDD	423		
<i>Installing and starting DDD</i>	423		
<i>Examining the main window</i>	423		
<i>Reviewing and stepping through source code</i>	424		
Making Stop Signs: Using Breakpoints to Watch Code	425		
<i>Setting a breakpoint</i>	425		
<i>Modifying a breakpoint</i>	425		
Tracking Variable Values in the Data Window	426		
<i>Opening the data window</i>	426		
<i>Adding a variable to the data window</i>	426		
<i>Changing the display to a table</i>	427		
<i>Using the Backtrace feature</i>	428		
<i>Using the Help menu</i>	428		
<b>Part XI: The Scary (Or Fun!) Stuff</b>	<b>429</b>		
<b>Technique 56: Burning CD-Rs without Getting Burned</b>	<b>431</b>		
Making Fedora Distribution CDs	432		
<i>Downloading the ISO images</i>	432		
<i>Verifying the checksums</i>	433		
Burning an ISO File to Disc at the Command Line	433		
<i>Finding the identity of your drive</i>	433		
<i>Running a test burn</i>	433		
<i>Burning the distribution discs</i>	434		
Creating an ISO Image at the Command Line	434		
Burning CDs without Making an ISO First	435		

## **xvi** *Linux Timesaving Techniques For Dummies*

<b>Technique 57: Search and Destroy setuid and setgid Programs</b>	<b>437</b>	<i>Keeping the daemons in check</i>	461
Exploring How setuid and setgid Can Be Dangerous	437	<i>Securing sendmail</i>	461
Identifying the Potential Troublemakers — Fast	439	<i>Closing the gaps in Apache</i>	461
<i>Finding setuid quickly and easily with kfind</i>	439	<i>Keeping temporary files safe</i>	462
<i>Finding setuid and setgid programs     at the command line</i>	440	<i>Building a better firewall</i>	462
Deciding to Turn Off setuid or setgid	441	<i>Port scanning with Bastille</i>	464
Changing the setuid or setgid Bit	441	<i>You're almost done!</i>	465
<b>Technique 58: Quarantining Suspicious Programs with UML</b>	<b>443</b>	Keeping Abreast of Security Issues	466
Who Belongs in Jail?	444	<b>Technique 61: Creating a Second Line of Defense with LIDS</b>	<b>467</b>
Using UML to Jail Programs	444	Turning LIDS On and Off	467
Changing the Default Password to the Jail	446	Testing LIDS before Applying It to Your System	468
Installing New Software and Resolving Conflicts	446	Understanding the LIDS Access Control List	468
<b>Technique 59: Troubleshooting Persnickety Programs</b>	<b>448</b>	Controlling File Access with LIDS	469
Using lsof to Find Out Which Files Are Open	449	Hiding Processes with LIDS	470
Debugging Your Environment with strace	450	Running Down the Privilege List	471
Investigating Programs with ltrace	451	<b>Technique 62: Getting Graphical with Shell Scripts</b>	<b>474</b>
Handy strace and ltrace Options	452	Getting Graphical at the Command Line	475
Recording Program Errors with valgrind	453	<i>Getting graphical in GNOME</i>	475
<b>Technique 60: Securing the Fort with Bastille</b>	<b>455</b>	<i>Getting graphical with KDE</i>	477
Hardening Your Hat with Bastille	455	<i>Staying desktop neutral</i>	478
<i>Downloading and installing Bastille and     its dependencies</i>	456	<b>Index</b>	<b>479</b>
<i>Welcome to the Bastille</i>	456		
<i>Addressing file permission issues</i>	457		
<i>Clamping down on SUID privileges</i>	457		
<i>Moving on to account security</i>	458		
<i>Making the boot process more secure</i>	459		
<i>Securing connection broker</i>	460		
<i>Limiting compiler access</i>	460		
<i>Limiting access to hackers</i>	460		
<i>Logging extra information</i>	460
