Aban Aya intervention, 486–489
Acree, M., 140
Action-oriented community diagnosis, 307–308
Adams, M. A., 415
Affective sub-streams of influence in TTI, 456, 459–460
Agonistic Striving (AS), 382, 383
Ajzen, I., 218
Alaniz, A., 277
Albarracín, D., 41
Alfonso, M., 331
Alter, 241
Anderson, E. S., 38
Anderson, R., 259
Antiretroviral medication (ARV) adherence:
 IMB model analysis of, 52; IMB model test for, 51–54; required for HIV prevention, 25
Aspen Institute, 285
Assessment and planning construct (CCAT), 245, 247, 252, 259–260, 266
Assessment in cultural transfer of theory, 561
Assets in SAT, 363, 376, 378
Attitudes. *See also* Elaboration Likelihood Model (ELM): beliefs underlying, 222–223; cancer-related behaviors and (table), 228; consequences of route to persuasion in ELM, 191–194; as determinant of behavior, 186–187, 218; measurement procedures, 187
Audience segmentation in CBPM, 336
Autonomy: MI and support for, 163–164; as psychological need in CET, 162; as psychological need in SDT, 159; regulatory styles and, 160–162; in SDT applications, 167–168, 169; in SDT model (diagram), 163; social context and, 162–163

B

Bakker, A. B., 202, 203
Baldwin, J., 331

Bandura, A., 71, 139, 217, 218
Bansal, A., 150
Barden, J., 185
BBBSA (Big Brothers Big Sisters of America), 119, 123
BCHS (Brant Community HealthCare System) IDM case, 527
Behavioral beliefs: background and cultural factors influencing, 223–224; as determinant of behavior, 218; intention and (table), 230; reasoned action and, 217; in SCT, 217; in TPB, 218
Behavioral ecological model (BEM): for acculturation, cultural contingencies, and health behavior, 440–442; cultural level extension of, 428–435; empirical evidence, 435–444; hierarchical systems in, 418–420; interlocked behaviors and cultural-level selection (diagram), 430; for legal contingencies, public policies, and enforcement, 435, 439–440; need for, 416–417; origins of, 417–418; overview, 417–420; for physical activity, the physical environment, and cultural practices, 443–444; principles of behavior, 421–427; selected studies supporting (table), 436–438; as selectionist, 420–421; for sexual behavior, 442–443; summary, 435, 444–445
Behavioral skills construct (IMB). *See also* Information-Motivation-Behavioral Skills (IMB) model: in ARV adherence test, 51, 52, 53; as determinant of HIV preventive behavior, 26, 27, 28; HIV prevention approaches lacking, 24; in motorcycle safety test, 50–51; sexual risk behavior tests (table), 31–32
Believe in All Your Possibilities program, 340

- Social determinants, 6
- Social Health of African American Women (SHAWL) study*, 402, 404–406

- Social influence processes: overview, 67, 74, 80, 82; selection, 67, 74, 81, 83–84; social norms, 67, 74, 81, 84–86; socialization, 67, 74, 81, 82–83; table summarizing, 81
- Social influence theory: description of social influence, 74; diagram, 74; empirical evidence, 74; future directions, 89; genesis of, 67, 69; influence of teenage passengers on teenage risky driving, 66, 86–88; levels of social influence, 76–80; macro-level influences, 67, 75; peer cluster theory, 68, 71; primary socialization theory, 68, 71; social cognitive theory, 68, 71–72; social context, 66–67, 75–76; social influence processes, 67, 80–86; social network theory, 68, 69–71; social norms theory, 69, 73; summary, 88–89; theory of reasoned action, 69, 72; theory summary, 73–74
- Social interaction processes in SAT, 374–376
- Social marketing in CBPM, 335–337
- Social network theory (SNT), 68, 69–71
- Social norms: beliefs underlying, 222–223; cancer-related behaviors and (table), 228; as determinant of behavior, 186, 218, 221–222; in IM, 221–222; as social influence process, 67, 74, 81, 84–86
- Social norms theory (SNT), 69, 73
- Social power in SAT, 363, 376, 378, 379–381
- SOCIAL stream of influence in TTI, 459, 460, 461, 463, 474–475, 482, 485, 492, 494
- Social-emotional competence in SAT, 363, 376, 378
- Socialization (social influence process), 67, 74, 81, 82–83
- Socioeconomic gradient, 360–361
- Speers, M., 285
- Stage theories of change: limitations of, 360; transtheoretical model, 198–199
- Stages of development construct (CCAT), 244, 246, 249, 250, 252, 253–254, 262–264
- Starace, F., 53
- STDs (sexually transmitted diseases), 305, 317–318
- Step Up, Step Out!* CBPM intervention, 338–339, 341
- Stewart, G. W., 306, 307
- Streams of influence in TTI: affective and cognitive-substreams, 456, 459–460; cultural-ENVIRONMENT, 459, 460, 461, 463, 475, 482, 485, 490, 492, 494; empirical support for, 474–475; flows and interactions between, 461; intra-PERSONAL, 458–459, 460, 461, 463, 474, 482, 490, 492, 494; overview, 458–459; in selected theories (table), 454; SOCIAL, 459, 460, 461, 463, 474–475, 482, 485, 492, 494
- Strebel, A., 148
- Stress. *See also* Traumatic stress: homeostatic models of coping and, 132; transactional models of coping and, 132
- Struening, E. L., 156
- Subjective norms, 72, 218
- Sundberg, N. D., 557
- Sweet, S., 157, 168, 171, 179

- ## T
- Tailoring. *See* Message tailoring analysis using ELM
- Target behavior and audience selection in CBPM, 342–343, 347–348
- Targeting: loss spirals in COR theory, 135; message tailoring applicable to, 198; tailoring versus, 199
- Taversky, A., 136
- Theory in health promotion, practice, and research. *See also specific theories:* continuum of (diagram), 8; development trajectory, 11–15; diagram, 7; as dynamic, 7; ecological models for, 562–567; fundamental concepts, 6–11; improving cultural transfer of, 556–561; individual-level approaches, 12–13; multiple functions of, 8; paradigms, 7–8; PRECEDE-PROCEED planning model, 554; research settings, 553; summary, 16, 567; testing in practice-based settings, 552–556; theory-based planning, 9–10; as a tool, 10–11; use of, 552, 553; utility of, 15
- Theory of action, SET as, 98
- Theory of gender and power: COR theory integration with, 150–151; exposures and risk factors (table), 399; future directions, 410–411; gender, power, and HIV prevention, 394; gender conceptualization as a social structure, 394–395; in HIV/AIDS risk-reduction case using COR theory,

Theory of gender and power (*continued*)

142–143; implications for research and action, 411–412; institutional level structures, 395, 398, 400, 401; overview, 395–396; sexual division of labor, 395, 396, 398, 399, 404; sexual division of power, 395, 398, 399, 400, 404–405; *SHAWL* study, 402, 404–406; *SIHLE* intervention, 407, 408, 409; *SiSTA* intervention, 403, 407, 408, 409; societal level structures, 395, 398, 400; structure of cathexis, 395, 399, 400–404; summary, 412; variables for exposures and risk factors, 402–403, 404–406; *WiLLOW* intervention, 407, 408, 409–410; on women's health (table), 397

Theory of planned behavior (TPB), 41, 72, 216, 218. *See also* Integrative model (IM)

Theory of reasoned action (TRA), 41, 69, 72, 217–218, 360. *See also* Integrative model (IM)

Theory of triadic influence (TTI): Aban

Aya intervention, 486–489; affective and cognitive-substreams of influence, 456, 459–460; diagram, basic view, 455; diagram, formal view, 462; distal influences, 457–458; ecological view of, 465–468; empirical support for, 468–477; etiology research applications, 477–479; flows and interactions between streams of influence, 461; future directions, 493–495; genesis of, 452–454, 456; health promotion applications, 480–486; implications for behavior change, 490, 492–493; levels of causation, influence, and prediction, 453–454, 456–458; mediation literature (table), 469–473; need for, 452–453; postulates (table), 491; proximal predictors of behavior, 458; role of behavior experience and feedback, 463–468; streams of influence, 454, 456, 458–460; strengths and limitations, 489–490, 492–493; summary, 495–497; theories integrated by, 489–490
