

## Contents

**Preface** XV

**List of Contributors** XVII

**Polymer Brushes: On the Way to Tailor-Made Surfaces** 1

*Jürgen Rühle*

- 1 Growth of Polymer Molecules at Surfaces: Introductory Remarks 1
- 2 Coatings: From First Principles to High-Tech Applications 3
- 3 Surface-Coating Techniques 6
- 4 Surface-Attached Polymers 10
- 5 Polymer Brushes: General Features 13
- 6 Theory of Polymer Brushes 15
- 7 Synthesis of Polymer Brushes 18
- 8 Polymer Brushes as Functional Materials 22
- 9 Microstructured Polymer Brushes 24
- 10 Surface-Initiated Polymerization: The Overall Picture 28

**Part I Synthesis** 33

**1 Recent Advances in Polymer Brush Synthesis** 35

*Anthony M. Granville and William J. Brittain*

- 1.1 Introduction 35
- 1.2 “Grafting To” Synthesis Technique 37
- 1.3 “Grafting From” Synthesis Technique 41

**2 Polymer Brushes by Atom Transfer Radical Polymerization** 51

*Jeffrey Pyun, Tomasz Kowalewski, and Krzysztof Matyjaszewski*

- 2.1 Introduction 51
- 2.2 Polymer Brushes on Flat Surfaces 52
  - 2.2.1 Controlled ATRP from Flat Surfaces 53
  - 2.2.2 Block Copolymer Brushes on Flat Surfaces 54
  - 2.2.3 Stimuli-Responsive Ultrathin Films from “Grafting To” Approach 55

2.3	Polymer Brushes from Particles	57
2.3.1	Spherical Brushes from Inorganic Colloids	58
2.3.2	Multilayered Core-Shell Colloids	58
2.3.3	Imaging of Individual Spherical Brushes	61
2.3.4	Modification of Carbon Black Fillers	63
2.4	Molecular Brushes	63
2.4.1	Synthesis of Molecular Brushes from Linear Polymeric Macroinitiators	64
2.4.2	Molecular Brushes from Dendritic Macroinitiators	65
<b>3</b>	<b>Polymer Brushes by Atom Transfer Radical Polymerization Initiated from Macroinitiator Synthesized on the Surface</b>	<b>69</b>
	<i>Viktor Klep, Bogdan Zdyrko, Yong Liu, and Igor Luzinov</i>	
3.1	Introduction	69
3.2	Experimental	72
3.3	Results and Discussion	73
3.3.1	Synthesis of Macroinitiator for ATRP	73
3.3.2	ATRP from Macroinitiator	77
<b>4</b>	<b>Synthesis of Polypeptide Brushes</b>	<b>87</b>
	<i>Henning Menzel and Peter Witte</i>	
4.1	Introduction	87
4.2	Preparation of Peptide Brushes by “Grafting To”	88
4.3	Preparation of Peptide Brushes by Grafting From Polymerization	90
4.3.1	Mechanisms of NCA Polymerization	90
4.3.2	Amine-Initiated Grafting From Polymerizations in Solution	93
4.3.3	Other Techniques for Amine-Initiated Grafting From Polymerizations	94
4.4	Preparation of Peptide Brushes by Living Grafting From Polymerization	95
4.4.1	Copolymerization Approach	95
4.4.2	Alloc-Amide Approach	99
<b>5</b>	<b>Bottle Brush Brushes: Ring-Opening Polymerization of Lactide from Poly(hydroxyethyl methacrylate) Surfaces</b>	<b>105</b>
	<i>Jong-Bum Kim, Wenxi Huang, Chun Wang, Merlin Bruening, and Gregory L. Baker</i>	
5.1	Introduction	105
5.2	Synthesis of PHEMA-g-PLA	109
5.3	Conclusions and Implications for Future Studies	114
5.4	Experimental Section	115
5.4.1	Materials	115
5.4.2	Preparation of Monomer Solution and Substrates	115
5.4.3	Ring-Opening Polymerization from PHEMA Surface	115
5.4.4	Analytical Methods	115

<b>6</b>	<b>Preparation of Well-Defined Organic-Inorganic Hybrid Nanostructures using Living Cationic Surface-Initiated Polymerization from Silica Nanoparticles</b>	<b>119</b>
	<i>Il-jin Kim, Su Chen, and Rudolf Faust</i>	
6.1	Introduction	119
6.2	Experimental Section	120
6.2.1	Materials	120
6.2.2	Characterization	120
6.2.3	Synthesis of Immobilized Macroinitiators	121
6.3	Results and Discussion	122
6.3.1	Living Cationic Surface-Initiated Polymerization of IB from Silica Nanoparticles in the Presence of Sacrificial Free Initiator	122
6.3.2	Living Cationic Surface-Initiated Polymerization of IB from Silica Macroinitiators	125
<b>7</b>	<b>Photoinitiated Polymerization from Self-Assembled Monolayers</b>	<b>129</b>
	<i>Daniel J. Dyer, Jianxin Feng, Charles Fivelson, Rituparna Paul, Rolf Schmidt, and Tongfeng Zhao</i>	
7.1	Introduction	129
7.2	Substrates	131
7.2.1	Silicon, Silica and Glass	131
7.2.2	Planar Gold	131
7.2.3	Nanoparticles	133
7.3	Photoinitiated Radical Polymerization Mechanisms	133
7.3.1	Free Radicals	133
7.3.2	Photosensitizers	134
7.3.3	Photo-Iniferters	135
7.4	Polymerization from AIBN-type SAMs	135
7.4.1	Design and Synthesis	135
7.4.2	Monolayer Characterization	137
7.4.3	Polymerization of Styrene	138
7.5	Conclusions and Future Studies	143
7.6	Experimental	144
7.6.1	Initiator Synthesis	144
7.6.2	Polymerizations	145
7.6.3	Reflection Absorption Infrared Spectroscopy (FT-RAIRS) Measurements	146
7.6.4	Ellipsometry	146
7.6.5	X-Ray Photoelectron Spectroscopy (XPS)	146
7.6.6	Molecular Weight Measurements	147
7.6.7	Molecular Modeling	147

- 8 Recent Advances in the Synthesis and Rearrangement of Block Copolymer Brushes** 151  
*Stephen G. Boyes, Anthony M. Granville, Marina Baum, Bulent Akgun, Brian K. Mirous, and William J. Brittain*
- 8.1 Introduction and Background 151
- 8.2 Controlled/"Living" Free Radical Polymerization 153
- 8.2.1 Atom Transfer Radical Polymerization (ATRP) 153
- 8.3 Synthesis of Block Copolymer Brushes 154
- 8.3.1 Diblock Copolymer Brushes 154
- 8.3.2 Triblock Copolymer Brushes 158
- 8.4 Rearrangement of Block Copolymer Brushes 160
- 8.4.1 Rearrangement of Diblock Copolymer Brushes 160
- 9 Surface-Grafted Hyperbranched Polymers** 167  
*Hideharu Mori and Axel H. E. Müller*
- 9.1 Introduction 167
- 9.2 "Grafting To" Approach 170
- 9.2.1 Synthesis of 2D Hybrids by "Grafting To" 170
- 9.2.2 Synthesis of 3D Hybrids by "Grafting To" 171
- 9.3 Multi-Step Grafting Approach 172
- 9.3.1 "Grafting To-Grafts" 172
- 9.3.2 "Grafting From-Grafts" 173
- 9.4 "Grafting From" Approach 173
- 9.4.1 Synthesis of 2D Hybrids by Surface-Initiated, Self-Condensing Vinyl (Co)polymerization 175
- 9.4.2 Synthesis of 3D Hybrids by Surface-Initiated Self-Condensing Vinyl (Co)polymerization 178
- 9.4.3 Theoretical Considerations 181
- 9.4.4 Other Systems 182
- Part II Characterization** 187
- 10 The Analysis and Characterization of Polymer Brushes: From Flat Surfaces to Nanoparticles** 189  
*Rigoberto C. Advincula*
- 10.1 Introduction 190
- 10.1.1 Polymer Brushes 190
- 10.1.2 SIP on Flat Surfaces and Particle Substrates 192
- 10.2 Characterization of Ultrathin Polymer Films and Polymer Brushes 193
- 10.2.1 Spectroscopy and Optical Techniques 194
- 10.2.2 Microscopy 195
- 10.2.3 Other Methods 196
- 10.3 Investigating Polymer Brush Systems 198
- 10.3.1 Characterization of the Step-by-Step Procedure 198

- 10.3.2 Investigating the Different Regimes of Polymer Brush Conformation on Surfaces 199
- 10.3.3 Investigating Phase Segregation and Formation of Patterns 200
- 10.3.4 Polymerization Mechanism 201
- 10.3.5 Patterning Using Nonlithographic Methods 204
- 10.4 The Importance of Characterizing Particles and Nanoparticles 204
- 10.5 Characterization and Analysis Methods for Polymer Brushes on Particles 205
  - 10.5.1 In-Situ Investigations on Particles 206
  - 10.5.2 Degrafted Polymers from Particles 208
  
- 11 Characterization of Polymer Brushes on Nanoparticle Surfaces 213**  
*Thomas A. P. Seery, Mark Jordi, Rosette Guino, and Dale Huber*
  - 11.1 Introduction 213
  - 11.2 Experimental 215
    - 11.2.1 Materials 215
    - 11.2.2 Instrumentation 215
    - 11.2.3 Pyrolysis GC-MS 216
    - 11.2.4 Infrared Monitoring of Polymer Formation 216
    - 11.2.5 Synthesis of Alkanethiol-Stabilized Gold Nanoparticles 217
    - 11.2.6 Synthesis of Stober Silica Nanoparticles 218
    - 11.2.7 Synthesis of NCSEOS 218
    - 11.2.8 Synthesis of BCH, NCSEOS, and TMEOS-Coated Nanoparticles 218
    - 11.2.9 Synthesis of TMEOS Silica-Polymer Mixture 219
    - 11.2.10 Synthesis of Silica-Poly(norbornene) Nanocomposites 219
    - 11.2.11 Isolation of Grafted Polymer Chains 220
    - 11.2.12 Polymer Stability Test 220
  - 11.3 Results and Discussion 221
  
- 12 Spherical Polyelectrolyte Brushes 231**  
*Matthias Ballauff*
  - 12.1 Introduction 231
  - 12.2 Synthesis and Characterization 234
    - 12.2.1 Determination of Core Radius  $R$ , Contour Length  $L_C$ , and Grafting Density  $\sigma$  234
    - 12.2.2 Titration Curve 235
  - 12.3 Experimental Verification of Theoretical Predictions 236
    - 12.3.1 Confinement of the Counterions 237
    - 12.3.2 Correlation of the Counterions to the Macroion 238
  - 12.4 Flow Behavior 240
  - 12.5 Applications 242
    - 12.5.1 Interaction with Charged Surfaces 242
    - 12.5.2 Interaction with Proteins in Solution 243

- 13 Weak Polyelectrolyte Brushes: Complex Formation and Multilayer Build-up with Oppositely Charged Polyelectrolytes** 249  
*Rupert Konradi, Haining Zhang, Markus Biesalski, and Jürgen Rühle*
- 13.1 Introduction 249
- 13.2 Synthesis and Data Evaluation 251
- 13.2.1 Synthesis 251
- 13.2.2 Multiple-Angle Nulling Ellipsometry 252
- 13.3 Swelling Behavior of Weak Polyelectrolyte Brushes in Aqueous Environments 253
- 13.3.1 The Influence of pH Value 254
- 13.3.2 Interaction with Monovalent Cations 254
- 13.3.3 Interaction with Divalent Cations 257
- 13.3.4 Interaction with a Trivalent Cation: Aluminum 263
- 13.3.5 A Classification 264
- 13.4 Interaction Between Polyelectrolyte Brushes and Oppositely Charged Polyelectrolytes in Solution 265
- 13.4.1 The Formation of Surface-Attached PEL-PEL Complexes 265
- 13.4.2 The Formation of PEL Multilayer Assemblies 268
- 14 Structure and Properties of High-Density Polymer Brushes** 273  
*Yoshinobu Tsujii, Muhammad Ejaz, Shinpei Yamamoto, Kohji Ohno, Kenji Urayama, and Takeshi Fukuda*
- 14.1 Introduction 273
- 14.2 Controlled Synthesis of High-Density Polymer Brush by ATRP 274
- 14.3 Structure and Properties of High-Density PMMA Brushes 277
- 14.3.1 Swollen Brushes 277
- 14.3.2 Dry Brushes 279
- 14.4 Application of High-Density Polymer Brushes 282
- 15 Behavior of Surface-Anchored Poly(acrylic acid) Brushes with Grafting Density Gradients on Solid Substrates** 287  
*Tao Wu, Jan Genzer, Peng Gong, Igal Szleifer, Petr Vlíček, and Vladimír Šubr*
- Glossary 287
- 15.1 Introduction 288
- 15.2 Experimental Section 292
- 15.2.1 Formation of the Gradient of the Polymerization Initiator 292
- 15.2.2 Preparation of PtBA and Hydrolysis into PAA 293
- 15.2.3 Polymer Characterization 294
- 15.3 Theory Section 296
- 15.4 Experimental Results 300
- 15.5 Discussion 304
- 15.5.1 Surface Hydrolysis of PtBA 304
- 15.5.2 Dependence of H on Ionic Strength 306
- 15.5.3 Dependence of H on the PAA Grafting Density 308
- 15.5.4 Molecular Insight from Calculations 310

<b>16</b>	<b>Kinetics of Polymer Brush Formation With and Without Segmental Adsorption</b>	<b>317</b>
	<i>Lynn S. Penn, Heqing Huang, Roderic P. Quirk, and Tae H. Cheong</i>	
16.1	Introduction	317
16.2	Experimental	320
16.2.1	Synthesis and Characterization of Amine Chain-End Functionalized Polystyrene	320
16.2.2	Introduction of Active Sites to Surface of Solid	320
16.2.3	Tethering Reactions in Good Solvent	320
16.2.4	Tethering Reactions in Poor Solvent	321
16.2.5	Monitoring the Tethering Reactions	321
16.3	Results and Discussion	323
16.3.1	Results in Absence of Segmental Adsorption	323
16.3.2	Results in the Presence of Segmental Adsorption	325
<b>Part III</b>	<b>Applications</b>	<b>329</b>
<b>17</b>	<b>Applications of Polymer Brushes and Other Surface-Attached Polymers</b>	<b>331</b>
	<i>Kenneth C. Caster</i>	
17.1	Introduction	331
17.2	Surface Modification and Functionalization	332
17.2.1	Polymerization Methodologies for Surface-Attached Polymers	332
17.2.2	Property Control	336
17.2.3	Impact on Types of Materials	336
17.3	Applications	336
17.3.1	Adhesion	337
17.3.2	Tribology	341
17.3.3	Stabilization and Compatibilization	341
17.3.4	Surface Coatings	343
17.3.5	Stimuli-Responsive and Switchable Surfaces	345
17.3.6	Separations	346
17.3.7	Nanofabrication	349
17.3.8	Surfaces for Electronics	350
17.3.9	Other Uses	351
17.4	Future Prospects	351
	Appendix	353
<b>18</b>	<b>Polymer Brushes: Towards Applications</b>	<b>371</b>
	<i>Gregory L. Whiting, Tamer Farhan, and Wilhelm T. S. Huck</i>	
18.1	Introduction	371
18.2	Experimental	372
18.2.1	Materials	372
18.2.2	Characterization	373
18.2.3	Synthesis of Triphenylamine Acrylate (TPAA) Monomer	373

18.2.4	Synthesis and Deposition of Trichlorosilane ATRP Initiator	373
18.2.5	Surface-Initiated Polymerizations	373
18.3	Results and Discussion	374
18.3.1	Kinetics of Surface-Initiated ATRP of MMA from Silicon	374
18.3.2	Surface-Initiated ATRP from Polymeric Substrates	375
18.3.3	Synthesis of Conjugated Polymer Brushes from ITO	377
<b>19</b>	<b>Polymerization, Nanopatterning and Characterization of Surface-Confined, Stimulus-Responsive Polymer Brushes</b>	<b>381</b>
	<i>Marian Kaholek, Woo-Kyung Lee, Bruce LaMattina, Kenneth C. Caster, and Stefan Zauscher</i>	
19.1	Introduction	381
19.2	Experimental	382
19.2.1	Materials	382
19.2.2	Substrates	383
19.2.3	Preparation of Initiator Monolayers	383
19.2.4	Nanopatterning of Initiator	383
19.2.5	NIPAAm Polymerization	384
19.2.6	Polymer Characterization	385
19.3	Results and Discussion	386
19.3.1	Surface-Initiated Bulk Polymerization	386
19.3.2	Phase Behavior and Mechanical Characterization	390
19.3.3	Surface Force Measurements	393
19.3.4	Nano-Patterning	396
<b>20</b>	<b>Mixed Polymer Brushes: Switching of Surface Behavior and Chemical Patterning at the Nanoscale</b>	<b>403</b>
	<i>Sergiy Minko, Marcus Müller, Valeriy Luchnikov, Mikhail Motornov, Denys Usov, Leonid Ionov, and Manfred Stamm</i>	
20.1	Introduction	403
20.2	Theory of Mixed Polymer Brushes	404
20.3	Synthesis of Mixed Brushes	409
20.3.1	The “Grafting To” Method	409
20.3.2	The “Grafting From” Method	411
20.4	Experimental Study of Phase Segregation in Mixed Brushes	412
20.5	Adaptive Responsive Behavior: Regulation of Wetting and Adhesion	417
20.6	Patterning of Mixed Brushes	420
<b>21</b>	<b>Local Chain Organization of Switchable Binary Polymer Brushes in Selective Solvents</b>	<b>427</b>
	<i>Melbs C. LeMieux, Denys Usov, Sergiy Minko, Manfred Stamm, and Vladimir V. Tsukruk</i>	
21.1	Introduction	427
21.1.1	Polymer Surface Modification	427
21.1.2	Polymer Brushes	428
21.1.3	Binary Polymer Brushes	429

21.2	Experimental	431
21.2.1	Materials and Synthesis	431
21.2.2	Methods	432
21.3	Results and Discussion	433
21.3.1	Dry State Analysis	433
21.3.2	Morphology in Solvent	434
21.3.3	Mechanical Response in Solvent	437
<b>22</b>	<b>Motion of Nano-Objects Induced by a Switchable Polymer Carpet</b>	<b>441</b>
	<i>Svetlana Prokhorova, Alexey Kopyshov, Ayothi Ramakrishnan, and Jürgen Rühle</i>	
22.1	Introduction	441
22.2	Materials	443
22.3	Results and Discussion	444
<b>23</b>	<b>Photochemical Strategies for the Preparation and Microstructuring of Densely Grafted Polymer Brushes on Planar Surfaces</b>	<b>449</b>
	<i>Oswald Prucker, Rupert Konradi, Martin Schimmel, Jörg Habicht, In-Jun Park, and Jürgen Rühle</i>	
23.1	Introduction	449
23.1.1	Topological and Chemical Patterning of Surfaces	449
23.1.2	Photochemical Pathways for Grafting Polymers onto Surfaces: A Literature Survey	451
23.2	General Features of Surface-Initiated Polymerization from Monolayers of Azo Initiators	453
23.3	Photolithographic Procedures for the Generation of Microstructured Polymer Brushes on Planar Surfaces	455
23.3.1	Photoablation of Polymer Brushes	455
23.3.2	Photoablation/Photodecomposition of the Initiator Layer followed by Thermal Polymerization	460
23.3.3	Patterning by Photopolymerization	462
23.4	Multifunctional Patterns	465
23.5	Applications of Photostructured Polymer Brushes	466
