

CONTENTS

CONTRIBUTORS	xiii
PREFACE	xvii
1. THREE GENERATIONS OF COEVOLUTIONARY ROBOTICS	1
<i>Jordan B. Pollack, Hod Lipson, Pablo Funes, and Gregory Hornby</i>	
1.1 Roboeconomics / 1	
1.2 Coevolution / 2	
1.3 Research Thrusts / 3	
1.3.1 Buildable Simulation / 3	
1.3.2 Evolution and Construction of Electromechanical Systems / 4	
1.3.3 Modularity Through Generative Encodings / 5	
1.4 Conclusion / 7	
Acknowledgments / 8	
References / 8	
2. BEYOND 2001: THE LINGUISTIC SPATIAL ODYSSEY	11
<i>James M. Keller, Pascal Matsakis, and Marjorie Skubic</i>	
2.1 Introduction / 11	
2.2 Force Histograms and Linguistic Scene Description / 12	
2.3 Scene Matching / 15	
2.4 Human–Robot Dialog / 16	
2.5 Sketched Route Map Understanding / 19	
2.6 The Future / 21	
Acknowledgments / 23	
References / 23	

3. COMPUTING MACHINERY AND INTELLIGENCE AMPLIFICATION 25

Steven K. Rogers, Matthew Kabrisky, Kenneth Bauer, and Mark E. Oxley

- 3.1 Introduction / 25
- 3.2 Estimating Intelligence / 26
- 3.3 Turing Test and Intelligence Amplification / 33
- 3.4 Measuring Intelligence Amplification / 35
- 3.5 The Future of Intelligence Amplification / 41
- References / 43

4. VISUALIZING COMPLEXITY IN THE BRAIN 45

Lloyd Watts

- 4.1 Introduction / 45
- 4.2 Neuroscience Knowledge / 48
- 4.3 Computing Technology / 53
- 4.4 Nontechnical Issues / 54
- 4.5 Conclusions / 55
- References / 55

5. EMERGING TECHNOLOGIES: ONR'S NEED FOR INTELLIGENT COMPUTATION IN UNDERWATER SENSORS 57

James F. McEachern and Robert T. Miyamoto

- 5.1 Introduction / 57
- 5.2 Background / 58
- 5.3 The Challenge / 59
- 5.4 Current Applications / 60
- 5.5 Future / 63
- 5.6 Summary / 64
- References / 64

6. BEYOND VOLTERRA AND WIENER: OPTIMAL MODELING OF NONLINEAR DYNAMICAL SYSTEMS IN A NEURAL SPACE FOR APPLICATIONS IN COMPUTATIONAL INTELLIGENCE 65

Rui J. P. de Figueiredo

- 6.1 Introduction / 65
 - 6.1.1 Shortcomings of the Previous Volterra and Wiener Formulations / 66
 - 6.1.2 Summary of This Chapter / 68

- 6.2 Classes of Nonlinear Dynamical System Models / 69
 - 6.2.1 Feedforward Models / 70
 - 6.2.2 Recurrent Models / 71
 - 6.2.3 State-Space Models / 72
- 6.3 The de Figueiredo–Dwyer–Zyla Space F / 73
 - 6.3.1 Definition of the Space / 73
 - 6.3.2 Properties of F / 76
- 6.4 Derivation of Sigmoid Functionals / 77
 - 6.4.1 Exponential Activation Functional / 78
 - 6.4.2 Modified Exponential Sigmoid Functional / 79
 - 6.4.3 Hyperbolic Tangent Sigmoid Functionals / 79
- 6.5 Best Robust Approximation of f in the Neural Space \mathcal{N} / 80
- 6.6 Optimal Combined Structural and Parametric Modeling of Nonlinear Dynamical Systems in \mathcal{N} / 88
- 6.7 Computationally Intelligent (CI) Systems / 90
 - 6.7.1 CI Systems as Mixed Systems / 91
 - 6.7.2 MOI and MOS Nets / 93
 - 6.7.3 Intelligent Learning as Combined Adaptation and Evolution / 93
 - 6.7.4 Discovery / 94
- 6.8 Concluding Remarks / 95
- References / 95

7. TECHNIQUES FOR EXTRACTING CLASSIFICATION AND REGRESSION RULES FROM ARTIFICIAL NEURAL NETWORKS

99*Rudy Setiono*

- 7.1 Introduction / 99
- 7.2 Rule Extraction / 101
 - 7.2.1 Neural Network Training and Pruning / 102
 - 7.2.2 Chi2: Discretization of Hidden Unit Activation Values / 103
 - 7.2.3 Generating Classification Rules / 104
 - 7.2.4 Approximating Hidden Unit Activation Function / 105
 - 7.2.5 Generating Regression Rules / 106
- 7.3 Illustrative Examples / 107
 - 7.3.1 Bankruptcy Prediction Using NeuroLinear / 107
 - 7.3.2 CPU Performance Prediction Using REFANN / 109
- 7.4 Conclusion / 111
- References / 112

8. NEURAL NETWORKS FOR CONTROL: RESEARCH OPPORTUNITIES AND RECENT DEVELOPMENTS	115
<i>Paul J. Werbos</i>	
8.1 The Challenge to Researchers: Context and Motivation /	115
8.2 A Specific Challenge and Associated Issues /	116
8.3 Strategies, Tasks, and Tools /	118
References /	120
9. INTELLIGENT LEARNING ROBOTIC SYSTEMS USING COMPUTATIONAL INTELLIGENCE	121
<i>Toshio Fukuda and Naoyuki Kubota</i>	
9.1 Introduction /	121
9.2 Motion Planning and Behavior Acquisition of Robots /	123
9.3 Emerging Synthesis of Computational Intelligence /	125
9.4 Intelligence on Robotic Systems /	126
9.4.1 Information and Representation /	126
9.4.2 Learning and Adaptation /	128
9.4.3 Search and Evolution /	129
9.5 Structured Intelligence for Robotic Systems /	130
9.5.1 Logical Inference and Intuitive Inference /	131
9.5.2 Communication of Partner Robots /	132
9.6 Concluding Remarks /	136
References /	137
10. COMPUTATIONAL INTELLIGENCE IN LOGISTICS	139
<i>Hans-Jürgen Zimmermann</i>	
10.1 Introduction /	139
10.2 Traffic Management /	141
10.3 Fleet Management /	142
10.4 In-House Logistics /	143
10.5 Conclusions /	146
References /	146
11. TWO NEW CONVERGENCE RESULTS FOR ALTERNATING OPTIMIZATION	149
<i>James C. Bezdek and Richard J. Hathaway</i>	
11.1 Iterative Optimization /	149
11.2 Existence and Uniqueness /	152

11.3	The Alternating Optimization Algorithm /	153
11.4	When Is Alternating Optimization a Good Choice? /	154
11.5	How Do We Solve (11.1)? /	155
11.6	Local Convergence of Alternating Optimization /	158
11.7	Global Convergence of AO /	160
11.8	Conclusions /	162
	Acknowledgment /	162
	References /	162

12. CONSTRUCTIVE DESIGN OF A DISCRETE-TIME FUZZY CONTROLLER BASED ON PIECEWISE-LYAPUNOV FUNCTIONS **165**

Gang Feng, Dong Sun, and Louis Wang

12.1	Introduction /	165
12.2	Fuzzy Dynamic Model and Its Piecewise-Quadratic Stability /	166
12.3	Controller Synthesis of Fuzzy Dynamic Systems /	170
12.4	Simulation Examples /	173
12.5	Conclusions /	176
	Acknowledgments /	176
	References /	176
	Appendix /	178

13. EVOLUTIONARY COMPUTATION AND COGNITIVE SCIENCE **179**

Janet Wiles and Jennifer Hallinan

13.1	Cognitive Science: What's on Your Mind? /	179
13.1.1	The Classic View of Cognitive Architecture: Symbolic Systems /	180
13.1.2	The Connectionist View of Cognitive Architecture: Subsymbolic Computation /	181
13.1.3	The Embodied Cognition View of Cognitive Architecture /	182
13.1.4	The Evolutionary View of Cognitive Architecture /	182
13.1.5	The Role of Evolutionary Computation /	183
13.2	Case Studies in Evolutionary Computation and Cognitive Science /	184
13.3	Summary /	188
	References /	189

14. EVOLVABLE HARDWARE AND ITS APPLICATIONS **191**

T. Higuchi, E. Takahashi, Y. Kasai, T. Itatani, M. Iwata, H. Sakanashi, M. Murakawa, I. Kajitani, and H. Nosato

- 14.1 Introduction / 191
- 14.2 Myoelectric Prosthetic Hand Controller with EHW / 191
 - 14.2.1 Background / 191
 - 14.2.2 The EHW Learning Method and Its Performance / 192
 - 14.2.3 General-Purpose EHW Chip for Gate-Level Hardware Evolution / 193
- 14.3 Data-Compression Chip for Printing Image Data / 194
 - 14.3.1 Data-Compression of Image Data / 194
 - 14.3.2 Prediction of Pixel Values by EHW / 195
- 14.4 Analog EHW Chip for Cellular Phone / 196
 - 14.4.1 Overview / 196
 - 14.4.2 The Chip Architecture and Yield Rate / 197
- 14.5 An EHW-Based Clock-Timing Adjusting Chip / 198
 - 14.5.1 Overview / 198
 - 14.5.2 The Chip Architecture / 199
 - 14.5.3 Simulation Study / 200
- 14.6 Evolvable Optical Systems and Their Application / 201
 - 14.6.1 Background / 201
 - 14.6.2 Advantages of Evolvable Optical Systems / 202
 - 14.6.3 Evolvable Optical Systems / 202
- 14.7 Current Research on EHW / 203
- References / 204

15. HUMANIZED COMPUTATIONAL INTELLIGENCE WITH INTERACTIVE EVOLUTIONARY COMPUTATION **207**

Hideyuki Takagi

- 15.1 Introduction / 207
- 15.2 Humanized Computational Intelligence / 208
- 15.3 Interactive Evolutionary Computation / 210
 - 15.3.1 What Is IEC? / 210
 - 15.3.2 IEC-Based Computer Graphics / 211
 - 15.3.3 IEC-Based Signal Processing / 212
 - 15.3.4 IEC-Based Control / 213
 - 15.3.5 IEC-Based Internet / 214
 - 15.3.6 IEC Interface Research / 215

15.4	Conclusion / 216	
	References / 216	
16.	UNSUPERVISED LEARNING BY ARTIFICIAL NEURAL NETWORKS	219
	<i>Harold Szu</i>	
16.1	A New Challenge: Space-Variant Unsupervised Classifications / 219	
16.2	Power of Pairs: Vector versus Scalar Data / 220	
16.3	Generalization of Shannon's Entropy Information Theory to Open Systems / 225	
16.4	Benchmarks of Space-Variant Unsupervised Classification / 229	
16.5	Multispectral Medical Imaging / 229	
16.6	Multispectral Remote Sensing / 234	
16.7	Biological Relevance / 235	
16.8	Conclusion / 241	
	Acknowledgments / 243	
	References / 243	
17.	COLLECTIVE INTELLIGENCE	245
	<i>David H. Wolpert</i>	
17.1	Motivation and Background / 245	
17.2	The Mathematics of Designing Collectives / 249	
17.3	Tests of the Mathematics / 255	
17.4	Conclusion / 257	
	References / 258	
18.	BACKPROPAGATION: GENERAL PRINCIPLES AND ISSUES FOR BIOLOGY	261
	<i>Paul J. Werbos</i>	
18.1	Introduction / 261	
18.2	The Chain Rule for Ordered Derivatives / 263	
18.3	Backpropagation for Supervised Learning / 265	
18.4	Discussion and Future Research / 268	
	References / 269
